1.2   Changes

Small Magic () Changes
 Finally, a new release of SmallMagic. A new attempt to
 trike back at the competition. So lets have a look at
 what has changes since the previous release.

```
                    Icons  -I cleaned up most  of the icons (check out the
                            much  improved  dithering  on  the  preferences
                            icons for example)
                          -I completed a new set of  commodity icons (all
                            the commodities I use are now iconised).
                          -The size of the  system icons  has changed  to
                            match those in the tools directory.
Introduction
            ()
                          -The AppIcons as used by MUI, Mtool and KingCon
Requirements
            ()
                            are now the  same size as standard  disk Icons
Installation
            ()
                            so the look better (check out the demo).
Distribution
            ()
                          -Some  Picasso icons have  been added to  Small
The   Credits
            ()
                            Magic. They can be found spreaded over all the
                            directories.
                          -The dockicons  have been improved and new ones
                            have been added.
    June 1995
            ()
            <-NEW  -The invention (I think) of DockPictures.
```

1.3   Copyrights & Distribution

```
                    Small Magic  () Copyrights & Distribution
                    MagicWB is  Copyright by  Martin  Huttenloher.  For more
                    details check out the MAgicWB  archive for it's licence.
                    In  the process of creating this  archive icons drawn by
                    (mostly  unmentioned)  authors from all  over the  Amiga
                    scene were used.
                    The  distribution and  production of  the icons in  this
                    archive  is done with the  official  approval of  Martin
                    Huttenloher.
                    All  graphics in this  archive may be freely distributed
                    to whoever you wish  and by whatever means that may seem
                    appropiate at the time as long  as no rediculous profits
Introduction
            ()
                    are made from the distribution of these graphics.

other guides (YES THIS MEANS YOU Tom Oszczepalski!).
The Credits

                  ()
                  The contents of this archive may not be used to kill
                  people in any way. (If you DO kill someone tell me how!)
                  All risk involved in using the contents of this archive
                  is not my problem. It aint cost ye anything so U aint
   June 1995   getting anything out of it!

1.4 DockPictures

Small Magic () DockPictures

A new thing on your workbench.. Dockpictures are simply
dockbrushes that fit together to create pictures. This
gives you pictures like those bigguns that crowd many
workbenches but each button is, in fact, four (or more)
separate buttons. (Check out the demopic).

   June 1995

1.5 Requirements

Small Magic () Requirements
Even a simple thing like some icons have their requirements.

SmallMagic is in eight colours so Kickstart 2.0+ is
needed in order to open a wb in at least 3 planes.

In order for the icons te be proportioned properly a
resolution must be used in which the pixel ratio is
about 1:2. Examples are:
          -Pal/NTSC Hires   NoLace   (Overscan)
          -Pal/NTSC SuperHires Laced   (Overscan)
          -Super72   NoLace

                             Some handy work is required in order to copy all ←
                                    the
                different icons to your harddisk.

1.6   Introduction

                Small Magic () Introduction
                By now I can safely presume everybody reading this is familiar
                with the MagicWB series. The 8 colour icons have spread round
                the Amiga scene like fire and are used by allmost everyone.
                But for people that do not have expensive monitors and who
                can't stand interlace (like me) this archive offers a good
                alternative.

                Over the last months more collections of rescaled icons have
                appeared on the scene. Obviously all of them claim to be the
                best. I think I should comment on that fact. Those icons that
                do look better than mine (I'll admit it) are invariably bigger

                ()
                 than my icons and therefore more memory hungry. And really

                ()
                 should we wonder at the fact that bigger icons can be more

                ()
                 beautifull? I could make the best icons ever if you   only

                ()
                 wanted three of them on your screen simultaniously. ;)

                ()
                             Besides icons this archive also contains fonts, ←
                                    dockbrushes
                and backgrounds. If you like the new drawers I used in this
                archive you should check out the SmallBench archive because
that is where I got them from.

1.7   Installation

```
Small Magic  () Installation
Do  not copy the  icons in  this archive  directly over  the
original workbench icons. This way information  contained in
the original icons will be lost forever!
For  replacing the icon  images, but leaving  tooltypes  and
position information  intact, you can use (for  example) one
of the following utilities:

- IconUpdate.lha      aminet:util/wb
- MUI_IconUpd12.lha   aminet:util/wb
- Iconizer            aminet:pix/icon (in Iconpack)
```

1.8   Credits to...

```
Small Magic  () Credits
Credits for the stuff you have received should go to all
the known (Osma/Martin/Pawel/Tom/Keith/Steve) and to the
unknown autors of MagicWB, especially to Martin  Hutten-
loher who probabely didn't know what he started with MWB.

This  product is  freeware. This  means you are  free to
thank me in any (non violent) way you like (I now have a
PicassoII running in 1280x512x80Hz but I would certainly
appreciate some extra memory)

You can contact me through the following channels:
