

README for Real World Navigation™ Suite for LightWave 3D

February 25, 1997

Quick Start instructions

To get started quickly, please view the tutorial in the product manual. It is an Adobe Acrobat document, and can be accessed via the Start Bar in *Start>Programs>Real World Navigation>Suite for LightWave 3D*. The file in the tutorial is typically installed in "C:\Program Files\Infinite Pictures\Real World Navigation\Suite for LightWave 3D\Tutorial".

Running the tutorial

Because of a limitation on the filename lengths in LightWave 3D, you will need to copy the tutorial files from the installation directory to one closer to the root. Once you do this, use the Options panel to change the Contents directory to location of the tutorial files. The scene, object, and surface files will all be found under this directory.

Release Notes

The setup program has installed all the tools in Real World Navigation™ Suite for LightWave 3D. Please note that because of distribution requirements, we ship all products with a 21-day access limit. Effectively, this means that you will be required to register your programs within 21 days. When you register, you will get one password for the plug-in, and another password for the standalone tools.

Please call Infinite Pictures toll free at (800) 990-2449 to fully activate your software. The entire registration process should take no more than five minutes of your time.

Note to Users Already Running Real World Navigation Tools

Note that this installation program changes the icon associated with the .pan files. However, due to some problem in Windows, these icons are not always updated, regardless of how many times you reboot your machine. To see the new icons, please check out PowerToys, a set of unsupported Microsoft (available at <http://www.microsoft.com/windows/download/powertoy.exe>). In TweakUI, under the Repair tab, click the "Repair Icons" button!

What was installed on your computer

- Real World Navigation™ Plug-In for LightWave 3D
- Hotspot Editor
- Avatar Editor
- CG Seamer
- SmoothMove Plug-In for Internet Browsers
- SmoothMove Viewer (Win95)
