

***FileMapper***<sup>™</sup> v1.1.2

©1992-93 Logical Solutions, Inc.

FileMapper is an installer application that modifies the System to allow the mapping of orphaned file types (you do not have the application that created them) to applications that you own. This will allow double-click launching of these orphaned files.

Balloon Help is there if you need on-line assistance.

And remember: He who laughs last usually had a backup.
