AC's TECH Volume 3.1
RESERVED until 12/18/92

Dear *AC's TECH* Subscriber,

I was just notified that your *AC's TECH* subscription has expired. With all the new advances occurring for the Amiga, it is unusual you are not among our current readers.

While reviewing our subscription renewal notification procedure, I discovered we send very few reminders to our readers. Our subscription staff reminded me that it has always been our policy not to "bother" our readers with an avalanche of subscription renewal requests, so the requests are kept to a minimum. Even though this policy keeps the junk mail out of your mailbox and gives us one of the highest marks for reader care, it can also mean that special readers, like you, do not receive enough notification in time to renew.

For that reason, I have personally reserved your brand-new issue of *AC's TECH*. Your issue is on hold and will begin a full new year of exciting *AC's TECHs* for you as soon as you either mail in the enclosed form or phone your order to 800-345-3360.

AC's TECH 3.1

Your reserved issue is the latest edition of the original disk-based technical magazine on the Commodore Amiga. *AC's TECH* 3.1 includes:

- Comean Computing's C++ Review
 - Creating 3-D vegetation with iterated functions
 - Programming the Amiga in Assembly Language Part 5
 - Bitmapped Graphics Formats
 - Linking With HotLinks!
- Plus! The HotLinks Developers Kit on Disk and more!

Each issue of *AC's TECH* is a great investment in programming insights and extending your Amiga knowledge. We are proud of the work we have been able to accomplish with *AC's TECH* so far, but with new opportunities such as the PCMCIA port, AA Chip sets, new expansion facilities, and more on the Amiga, the Amiga is a great resource for even better hardware and software projects.

I know you will want to take advantage of this special reserved issue, so please do not delay. Your *AC's TECH* 3.1 will be mailed as soon as we hear from you. Unfortunately, due to demand for this issue, I can promise to hold your copy only until December 18, 1992.

As always, thank you for your continued support and your interest in the Amiga. The release of the A600, A4000, and A1200 have boosted the Amiga as a multifaceted computer with very interesting opportunities.
