

Player for midi- and waveform-files

This Windows 3.1 application allows you to play all *.mid and *.wav soundfiles on your soundcard.

The usage of the programm does not need many explanations. After startup you will see a Dialogbox asking you to get a registered version if you find in this program usefull. After quitting it, the "Catsplayer" will show you a listbox with all soundfiles in the directory which you can play at once by dubliclicking them. You can select any number of soundfiles and pull them into the listbox for queueing sounds by holding down both right and left mouse-button. Start the Soundqueue with the PLAY-button.

The INFO-button shows you an information-window (only for waveform-files), which tells you about samplingrate, size, duration and number of A/D-bits. You can also play the sound reverse. Play around with all the features and you will find it easy to use.

This program was my first exercise in writing applications for Microsoft Windows, which I did in summer-vacation from university. So, what about registrating this application if you find it usefull to play your soundfiles, so I can pay off the debts I had to take for buying all the programming tools ?

Anyway, I hope you will like this program.

Christian Abeln, Karlsruhe BRD

Registrationform

Please send me the newest release of the Windows 3.1 application CATSPLOYER for playing waveform- and midi-files on PC's with soundcard.
I will get a personally registered version.
