

«INCLUDE SA Demo Text 2, Set Code»

Second Demo Source Text File
for *Scholar's Aid*
(Demonstrating Handling of Errors)

This is the second file Source Text File to demonstrate how *Scholar's Aid* handles various types of mistakes in preparation of documents and the bibliographic database. As before, Figure, table, equation, appendix, and list codewords are embedded in the text: (Figure «fig1p1d1», Table «tbl1p1d1»), Appendix «aexample», list «List-any», equation («eqn1p1d1»), and references («82smi122», «83edw561»).

This paragraph demonstrates the response of *Scholar's Aid* to errors in the use of codewords in the text: «erroneous codeword».

Each time an error is found (e.g., «85short») the paragraph containing the error is placed in a file, "SA Text Errors" (on the document disk) and printed, if requested.

Another type of error is the use of a reference codeword that is not in the bibliographic database, for example: «84New101». These errors will be found and reported by *Scholar's Aid* on the second pass, the compilation step.

«INCLUDE SA, Ref List Format»
