Active Processes Definitions

Note: *These are applications, DAs, etc. which are currently running on the machine*

○ *Process Name : Name of file from which the process came*
   ◊ *Serial Number = In hex, used to communicate with other processes*
   ◊ *Type = Finder type of file which originated the process*
   ◊ *Creator = Finder creator of file which originated the process*
   ◊ *Partition Start = Address of process in memory in hex*
   ◊ *Partition Length = Length of process in bytes*
   ◊ *Partition FreeMem = Free memory available within space allocated to process in bytes. Corresponds to white space in "About this Macintosh next to the program's name*
   ◊ *Path Name = Location of file*
   ◊ *Launched By = Who/what launched the process*
   ◊ *Attributes :*
      ✛ *Can Multi-Launch = Yes/No [System 7]*
      ✛ *Can accept Suspend/Resume Events = Yes/No*
      ✛ *Can operate in Background = Yes/No*
      ✛ *Can operate in Foreground = Yes/No [System 7]*
      ✛ *Can perform own Activate tasks = Yes/No*
      ✛ *Is notified when Sub-Process ends = Yes/No [System 7]*
      ✛ *Can receive Mouse Events in Background = Yes/No [System 7]*
      ✛ *Is 32 Bit compatible = Yes/No [System 7]*
      ✛ *Is High Level Event aware = Yes/No [System 7]*
      ✛ *Can receive High Level Events across a Network = Yes/No [System 7]*
      ✛ *Can recognize Stationary Documents = Yes/No [System 7]*
