TReadHeader - read a TIFF header from a TIFF file

Synopsis

OSErr TReadHeader(refNum, dirOffset, byteOrder)
Int 16 refNum;
Int 32 *dirOffset;
Int 16 *byteOrder;

Description

TReadHeader reads a TIFF file header from the file specified by *refNum*. The file offset of the first IFD (Image File Directory) is returned at the address specified by *dirOffset* and the TIFF byte order specifier is returned at the address specified by *byteOrder*.

Return Value

The return value is a Macintosh operating system result code. A nonzero result code (usually negative) signals an error. For a full list of operating system result codes see Appendix A of <u>Inside Macintosh,</u> (Volume III).
