Chapter 1

RexxScripts

1.1   ARexx-Scripts for the Workbench ARexx interface

1.2   Scripts for icon manipulation

* IconSorter.rexx

Description:

============

Sorts icons from active Workbench window in alphabetical order (vertically).

This script needs following arexx-libraries:

- rexxreqtools.library

- rexxtricks.library

- rexxdossupport.library

Template: ORDER/M/K,SPACEX/N/K,SPACEY/N/K,SAMEHEIGHT/S,NAMECHECK/S

Parameters: ORDER = TOOL , DRAWER , PROJECT

SPACEX = number of pixel between horizontal icons.

SPACEY = number of pixel between vertical icons.

SAMEHEIGHT = if set all icons will have the same height.

NAMECHECK = will check the width of the Iconname and use it.

Example: IconSorter.rexx ORDER=TOOL PROJECT DRAWER SPACEX=20

* OpenInformationWindow.rexx

Description:

===========

Opens the information window from each selected icon(s)

* ToggleIcon.rexx

Description:

===========

Toggle the (un-)select status from the active window icons.

1.3   Scripts for drawer manipulation

* CloseActiveWin.rexx

Description:

===========

Closes the active Workbench window.

* CloseExceptActiveWin.rexx

Description:

===========

Closes all Workbench windows. The active window will be alive.

* CloseSubWindows.rexx

Description:

===========

Closes all opend sub-windows from the active Workbench window.

* CloseTopWindows.rexx

Description:

===========

Closes all root windows outgoing from the active Workbench window.

* CloseWin.rexx

Description:

===========

Closes all Workbench windows except "root".

* OpenSelectedDrawer.rexx

Description:

============

You select an drawer with a device-requester and this pre-selected drawer will

be open.

1.4 Scripts for file/drawer manipulation

* Delete.rexx

Description:

============

Deletes selected icon(s).

* Open.rexx

Description:

============

Opens an drawer or starts a selected tool.

1.5 THE.rexx

* THE.rexx

Description:

============

This script is for editing the Tools-Menu and the Hotkey functions from

Workbench. THE.rexx creates an ARexx-script that should be run from

WBStartup to install the Hotkeys and Tools-Menu each startup.

This script needs tritonrexx.library and rexxtricks.library.

Template: PUBSCREEN/K

Example: THE.rexx DM.1

1.6 How to install

Installation:

=============

I recommend to bind the scripts with THE.rexx as Hotkey or to add them

to the Workbench Tools-Menu.

1.8 requirements

Requirements

============

- RexxMast

- rexxsyslib.library (this library is part of a a regular Workbench installation)

1.9 hints

Hints:

======

Set the S-Bit from Arexx-Script and you don't need to call the rx command.
