### 1.4 What is needed?

Requirements:

- Amiga - A-OS2.0 or higher - Med2Xm or Med2Xm.elf program - \*.med-files to convert

## 1.5 Installation!

Copy the Med2Xm-GUI program on the place wherever you want to have it.

## 1.6 Menu!

Menu:

Project/Quit Quit the MED2XM-GUI.

Prefs/Load Med2Xm Load the MED2XM-Program (If you want to convert a File, you have to load the Program!)

Prefs/Load Load the last saved configuration.

Prefs/Save Save the configuration (Saved options: Buttons, the directories and the window-position)

Prefs/AutoSave Save the setting automatically on quit the program.

Control/Convert Same function as the Convert button. It starts the conversation.

## 1.7 Probleme

Problems:

1. If you have a PowerPC in your system, use direct the Med2Xm.elf for the executable. Otherwise the output doesn't work. This is a problem by the taskmanaging. If a PowerPC is found while using the Med2Xm, the Med2Xm automatically use the elf code. The Med2Xm.elf send now the Information to the console but my program is waiting for output from Med2Xm itself. So the output isn't displayed, but the file is converted anyway.
