               Thanks
               'Twas brillig, and the slithy toves
     Did gyre and gimble in the wabe:
  All mimsy were the borogoves,
     And the mome raths outgrabe.
```

1.2 Introduction

Introduction

Jabberwocky is a client software for the Jabber.

Jabber is an instant messaging system, similar to ICQ or
AIM, yet far different. It is open source, absolutely free,
simple, fast, extensible, modularized, and cross platform.

Servers are distributed (you can run your own) and Jabber
users are identified by their Jabber IDs which look like
username@server.com (similar to email addresses).

Server modules (transports) allows cross messaging between
other networks (AIM, ICQ, MSN, IRC, etc), so you can throw
your old chat clients away ;)

More information can be found at:

  http://www.jabber.org (developer site)

  http://www.jabbercentral.com (site for users)

1.3 License

License

Jabberwocky (Jabber Instant Messenger Client)
Copyright (c) 2001 Gürer Özen <palpa@jabber.org>

This program is shareware. Since I don't want to force you
to register, there aren't any restrictions at all. But if
you want to motivate me to continue the development, you
can send $10 (can be more if you want :) to the following
address:

Murat Sitesi T-18
81020 Uskudar
Istanbul
TURKEY

Yes, put the money in envelope. I'm not accepting other
methods or currencies for payment. If you have any problems
you can contact with me via email <palpa@jabber.org> or
via jabber madcat@jabber.org.

Oh, by the way, I reject any liability or responsibility
for damages or loss of data directly or indirectly caused
by this software ;)

1.4   Requirements

Requirements

```
* AmigaOS 3.x
* MUI 3.8 or higher
* NList.mcc 19.97+ (MUI Class)
* TextEditor.mcc (MUI Class)
* TCP/IP stack (Genesis, Miami 2.0+ or MiamiDx)
```

1.5   Installation

Installation

Copy Jabberwocky drawer to wherever you want.

Jabberwocky will write configuration and log files into its
startup directory, so uninstalling is as simple as well.

If you are not using MorphOS, you can delete the file
Jabberwocky.morphos

1.6   Usage

                Usage

Start the Jabberwocky. If this is your first time, you'll
see the
                account window.
                 Type a Jabber ID and a password
into the string gadgets, and click on register button.

After seeing "Online" at the top of the main window, you
can start adding your buddies to your roster with
Roster/Add Contact menu. You'll need to register for
using other networks. Select Agents List from Windows
menu, select the transport you want (ICQ for example)
and click Register button. Then you can add ICQ people
with IDs like 1234567@icq.jabber.org

1.7   Windows

                Windows

 Main Window

                Account Window

1.8 Account Window

```
Account Window

Jabber IDs has three parts:

user@server/resource

user:     Your username at the server.

server:   Domain name of your server. Currently there are
          only a few public Jabber servers. You can find
          a list of them at http://jabbersearch.de

resource: Optional string for representing your connection.
          If left empty, default resource "Jabberwocky" is
          used. You can have different connections to the
          same account with different resources. That's
          handy for running different Jabber applications
          within one account at the same time.

An example:
madcat@jabber.org  (this is my account on the jabber.org)
```

1.9 Arexx Commands

```
Arexx Commands

Name of Arexx port: JABBERWOCKY.<x> where x is the instance
number of the program.

V1.0
====

First public release.
```

1.13 Future Plans

```
                Future Plans

* Bugfixes, lots of them :)
* Locale support
* Plugin api for extending Jabber protocol.
* More ARexx commands.
* VCard support.
* Message database and history.
* SSL/HTTP connections to servers.

Your
                registrations
                 will motivate me to
implement these features sooner.

You can also contribute to the Jabberwocky by sending
original artwork (icons, logos, etc), sound effects
for events, and useful Arexx scripts.
```

1.14 Thanks

```
Thanks

* Jeremie Miller and other Jabber developers for designing
and coding such a good instant messaging system.

* Jacob Laursen for taking over the development of Amster,
and thus giving me more time for working on Jabberwocky.

* Ralph Schmidt and Emmanuel Lesueur for MorphOS, ppc
versions of ixemul, gcc, ade, and porting help.
```
