Federal Communications Commission (FCC) Statement

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user is required to correct the interference at his expense.

The user is cautioned that changes and modifications made to the equipment without approval of the manufacturer could void the user's authority to operate this equipment.

Introduction

The ES8510-XTE is a managed industrial Ethernet switch that is equipped with ten 10/100BASE-TX ports, which supplies three Combo ports that provide:

- Copper RJ45 Ethernet ports (10BASE-T and 100BASE-TX)
- SFP slots (100BASE-FX)

When the SFP port is active and installed on a Combo port, the corresponding Combo RJ45 port is inactivated. For example, if an SFP transceiver is installed and active on the **8SFP** port, the corresponding RJ45 Port 8 becomes inactive.

The embedded software supports full Layer 2 networking features. In addition, the ES8510-XTE provides ring redundancy, network control, security, and alert features. Security is enhanced with advanced features such as IEEE 802.1Q VLAN and port/IP security. Performance is optimized by QoS and IGMP Snooping/Query. Redundant Ring technology enables superb self-healing capability for network failure and it also provides an advanced redundant network solution; Ring Coupling and Rapid Dual Homing technology. Ring Coupling and Rapid Dual Homing technology means that an Ethernet Ring can be extended more easily whether with Control switches or other managed switches. Event warnings can be sent to the network administrator by email or system log and to field engineers by relay output.

The ES8510-XTE has rugged aluminum housing and was designed for industrial environments. The ES8510-XTE provides a wide operating temperature and is NEMA TS2 certified.

Detailed specifications are available for the [ES8510-XTE](#).

You can refer to [Feature Overview](#) on Page 28 for web user interface features.

Hardware Installation

You can use the following subsections to install the RocketLinx ES8510-XTE:

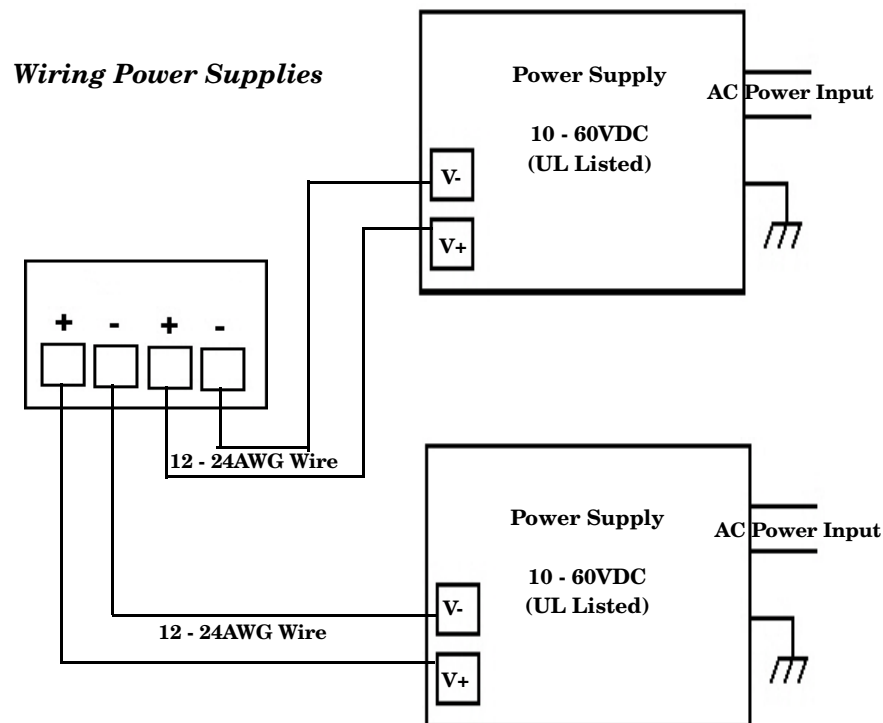

- [Connect the Power and Ground](#)
- [Connect the Digital Inputs and Relay Outputs](#) on Page 10
- [Mount the ES8510-XTE](#) on Page 11
- [Connect the Ethernet Ports](#) on Page 12
- [Connect SFP Transceivers \(Combo Ports 8-10\)](#) on Page 13
- [LED Descriptions](#) on Page 13
- [Panel Layout](#) on Page 14
- [Reset Button](#) on Page 14

Connect the Power and Ground

You can use the following procedure to connect power and the ground to the ES8510-XTE.

1. Connect the DC power inputs.
 - a. Insert positive and negative wires (12-24AWG) into the PW+ and PW- contacts.

Note: Power should be disconnected from the power supply before connecting it to the switch. Otherwise, your screw driver blade can inadvertently short your terminal connections to the grounded enclosure.

Positive and negative power system inputs are both accepted, but PW1 and PW2 must be applied in the same mode.

- b. Tighten the wire-clamp screws to prevent the wires from coming loose.
 - PWR1 and PWR2 support power redundancy and reverse polarity protection.
 - If both power inputs are connected, the ES8510-XTE is powered from the highest connected voltage.
 - The ES8510-XTE can emit an alarm if PW1 or PW2 are no longer receiving power.
- 2. Connect a ground wire between the chassis and earth ground using 12-24AWG wire to ensure that the ES8510-XTE is not damaged by noise or electrical shock.
 - a. Loosen the chassis ground screw on the bottom of the ES8510-XTE.
 - b. Insert the ground wire.
 - c. Tighten the ground screw after the earth ground wire is connected.

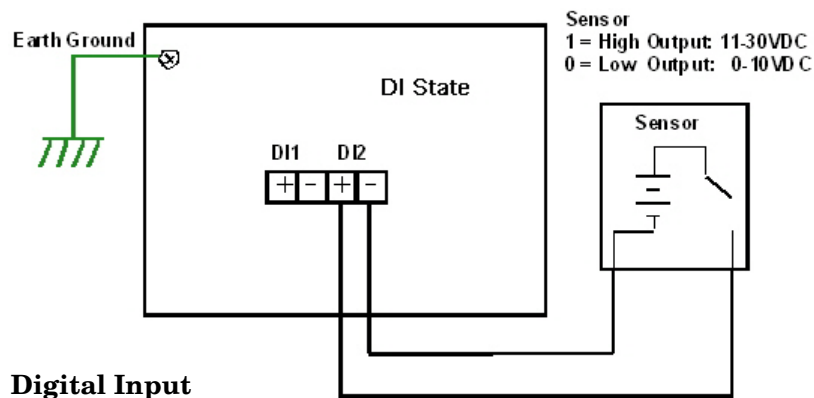

Connect the Digital Inputs and Relay Outputs

The ES8510-XTE provides two digital inputs and two digital outputs (dry relay output) on terminal block connectors on the bottom of the unit. The fault conditions can be configured in the web user interface or Command Line Interface (CLI) and include:

- DI State
- Power failure
- Ethernet port link break
- Dry output
- Ping failure
- Super Ring failure

You can configure events using one of the ES8510-XTE user interfaces ([Fault Relay](#) on Page 104) or the Command Line Interface ([Global Configuration Mode](#) on Page 127).

The Digital Input pin can be pulled high or low so that the connected equipment can actively drive these pins. The web user interface allows you to read and set the value to the connected device. The power input voltage of logic low is 0 to 10VDC and logic high is 11 to 30VDC. Do not apply a higher voltage than the specification; it may cause internal circuit damage or a cause an incorrect DI action.

Digital output relay contacts are energized (open) for normal operation and close for fault conditions. The digital output relay contacts support up to 1A at 30VDC. Do not apply voltage and current higher than the specifications.

1. Insert the positive and negative wires (12-24 AWG) into V+ and V-.
2. Tighten the wire-clamp screws to prevent the wires from coming loose.

Mount the ES8510-XTE

You can use the following procedure to mount the ES8510-XTE on a DIN rail or on the wall.

The DIN rail clip is already attached to the ES8510-XTE. If the DIN rail clip is not screwed onto the ES8510-XTE, follow the instructions and the figure below to attach DIN rail clip to the ES8510-XTE.

DIN Rail Mounting

1. If necessary, use the screws to attach DIN rail clip to the rear panel of the ES8510-XTE. (To remove DIN rail clip, reverse Step 1.)
2. Insert the upper end of DIN rail clip into the back of DIN rail track from its upper side.
3. Lightly push the bottom of DIN rail clip into the track.
4. Verify that the DIN rail clip is tightly attached on the track.
5. To remove the ES8510-XTE from the track, reverse the steps above.

Follow the steps below to install the ES8510-XTE with the wall mounting plate:

1. To remove the DIN rail clip from the ES8510-XTE, loosen the screws from the DIN rail clip.
2. Place the wall mounting plate on the rear panel of the ES8510-XTE.
3. Use the screws to attach the wall mounting plate to the ES8510-XTE.
4. Use the hook holes at the corners of the wall mounting plate to hang the ES8510-XTE onto the wall.
5. To remove the wall mounting plate, reverse the steps above.

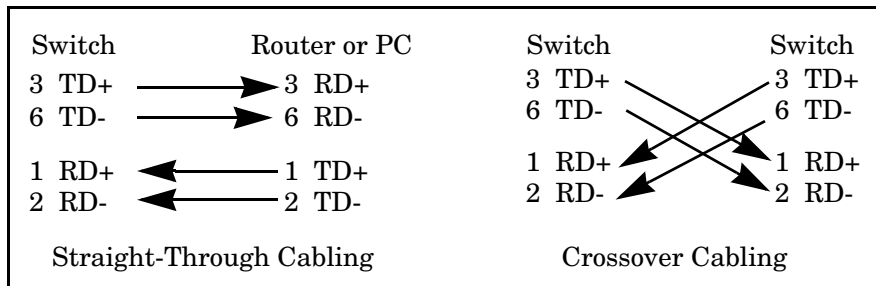

Connect the Ethernet Ports

You can use the following information to connect standard Ethernet cables between the ES8510-XTE Ethernet ports and the network nodes.

- Ports 1-7 are Fast Ethernet (10/100BASE-TX) ports.
- Ports 8-10 are RJ45/SFP Combo ports that support (10/100BASE-TX / 100BASE-FX).

See [Connect SFP Transceivers \(Combo Ports 8-10\)](#) on Page 13 for information about SFP installation.

All of the Ethernet ports automatically detect the signal from the connected devices to negotiate the link speed and duplex mode (half- or full-duplex). Auto MDI/MDIX allows you to connect another switch, hub, or workstation without changing straight-through or crossover cables. Crossover cables cross-connect the transmit lines at each end to the received lines at the opposite end.

Connect one side of an Ethernet cable into any switch port and connect the other side to your attached device. The **LNK/ACT** LED is lit when the cable is correctly connected. Always make sure that the cables between the switches and attached devices (for example, switch, hub, or workstation) are less than 100 meters (328 feet) and meet these requirements.

- **10BASE-T**: 2-pair UTP/STP Category 3, 4, 5 cable, EIA/TIA-568 100-ohm
- **100BASE-TX**: 2-pair UTP/STP Category 5, 5e cable, EIA/TIA-568 100-ohm

Connect SFP Transceivers (Combo Ports 8-10)

The ES8510-XTE equips three SFP ports combined with RJ45 Fast Ethernet ports (Ports 8-10). The SFP ports accept standard mini GBIC SFP transceivers. that support 100BASE-FX.

To ensure system reliability, Comtrol recommends using [Comtrol certified SFP Transceivers](#).

1. Plug the SFP transceiver into the SFP fiber transceiver.
2. Connect the transmit channel to the receive channel at each end.
3. Check the direction/angle of the fiber transceiver and the fiber cable.

Note: This is a Class 1 Laser / LED product. Do not stare at the Laser / LED Beam.

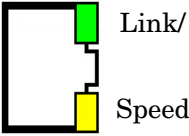

The SFP port does not function until the fiber cable is linked to another active device. The SFP and corresponding RJ45 ports work in an exclusive mode. Traffic sent or received through the SFP module has priority thus no traffic is sent or received over the corresponding RJ45 connection. To use the RJ45 connection, remove the corresponding SFP.

The SFP cage is 2 x1 design.

LED Descriptions

This subsection provides information about the ES8510-XTE LEDs. You can also refer to [Device Front Panel](#) on Page 117 for information about using the web user interface to remotely view LED information.

LED Name	LED On	LED Blinking	LED Off
Power 1 Power 2	Green: Power available		No power
DO1 (Digital Output) DO2 (Digital Output)	Red: DO activated		DO not activated
DI1 (Digital Input) DI2 (Digital Input)	Green: DI activated		DI not activated
R.M. (ring master)	Green: Working as a Ring Master	Green: Ring failed	Ring function disabled or the ES8510-XTE is on a ring but not the ring master
1 - 7 	Green: Linked to another device Amber: Full-Duplex	Green: Active traffic	Not connected Collision
8 - 10 SFP RJ45	Green: Connected Green: Active connection	Green: Active connection Green: Active connection	Plugged in but not linked up Not connected

Panel Layout

The ES8510-XTE provides ten 10/100BASE-TX ports of which three are Combo ports (RJ45/SFP).

Reset Button

The ES8510-XTE has a reset button that you can use to reboot the ES8510-XTE or reset the configuration to the factory default.

Reset Button	Description
Depress 5 Seconds	This reboots the ES8510-XTE without changing the configuration.
Depress > 10 Seconds	This loads the factory default configuration values into the ES8510-XTE including the IP address.

The **Reset** button is located on the front panel of the ES8510-XTE to the right of the **RS** LED.

Initial Configuration Using NetVision

NetVision is a management utility for the RocketLinx family of switches. This section discusses the following procedures:

- [Setting Up NetVision](#)
- [NetVision Overview](#) on Page 16
- [Programming Network Information](#) on Page 18
- [Creating a Backup Configuration File](#) on Page 19
- [Uploading a Configuration File](#) on Page 20
- [Upgrading Firmware](#) on Page 21
- [Upgrading the Bootloader](#) on Page 22

Optionally, you can use the web user interface or the CLI to perform these tasks on the ES8510-XTE:

- [IP Configuration](#) on Page 39
- [Firmware Upgrade](#) on Page 55
- [Basic Settings \(CLI\)](#) on Page 132

Setting Up NetVision

Use the following procedure to set up NetVision.

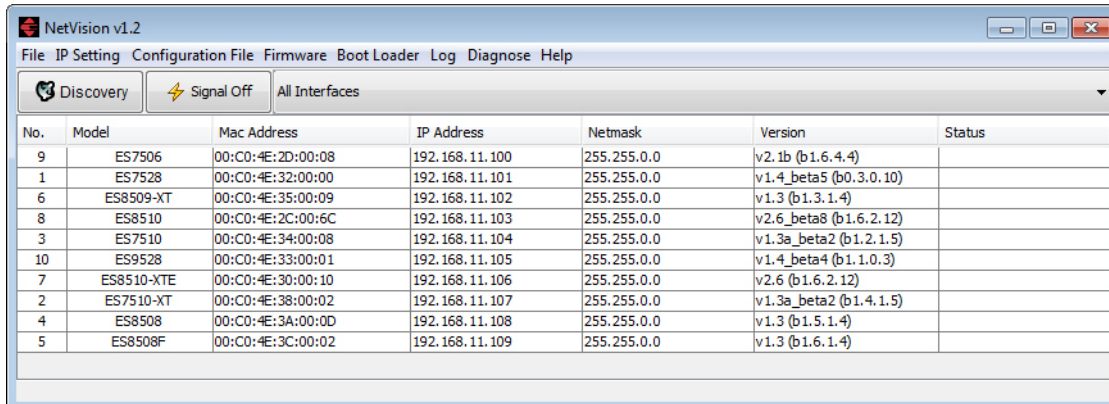

1. If necessary, install the latest version of the [Java Runtime Environment](#).
2. Copy NetVision into a host system with a Windows operating system. Make sure that you note the file location because NetVision is an executable and it is not available through the Start button. For your convenience, you may want create a NetVision shortcut on your desktop.

NetVision is available on the *RocketLinx Software and Documentation* CD or you can download NetVision from the ES8510-XTE **Software** page on the [Control FTP site](#).

3. Start NetVision.
4. To locate RocketLinx switches connected to a specific interface, select the interface from the drop list or select **All Interfaces** to locate all RocketLinx managed devices on the network.

- Click the **Discovery** button. After five seconds the ES8510-XTE and any other managed RocketLinX models should display.

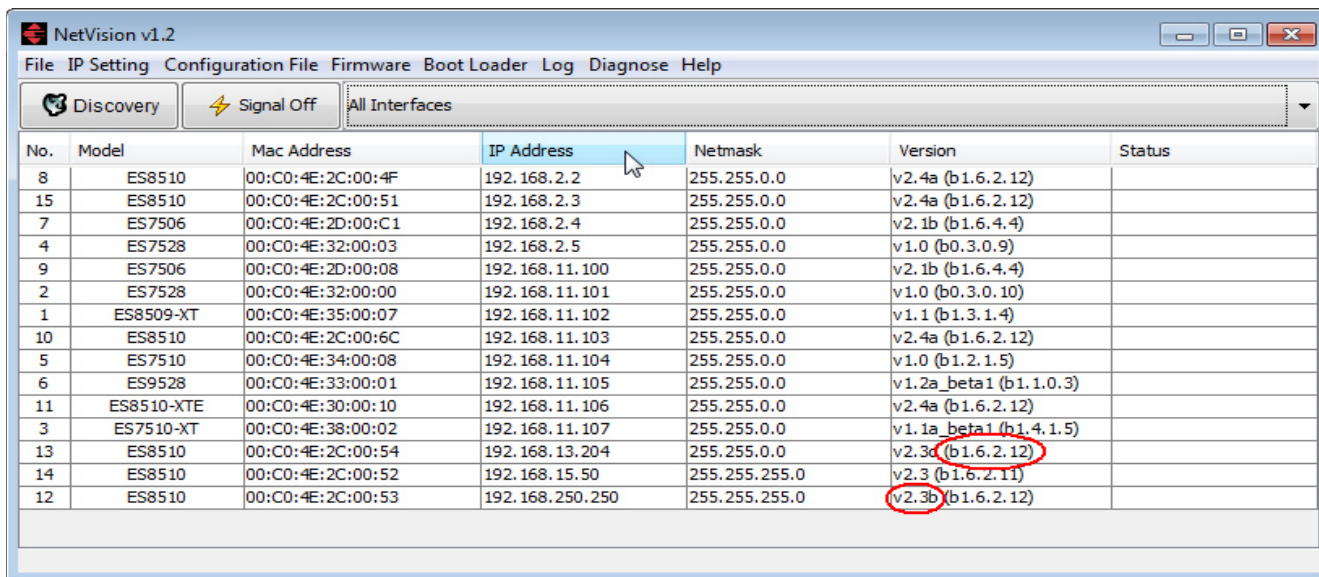

Go to the [Programming Network Information](#) subsection on [Page 18](#) to program the network information.

NetVision Overview

This subsection provides an overview of NetVision and NetVision menus.

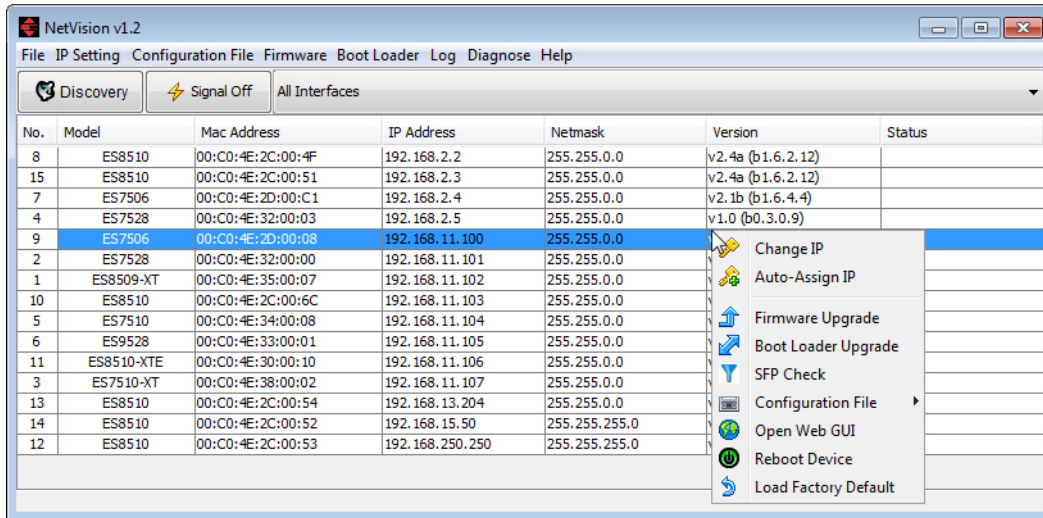

You can change the order of any column by clicking the column heading. The following graph shows displaying the RocketLinX switches by IP address.

*v2.3b is the firmware version.
b1.6.2.12 is the Bootloader version.*

You can highlight a RocketLinX and use the menus in the table below to perform the following tasks.

Optionally, highlight a RocketLinxor multiple RocketLinx switches, right-click, and use the pop-up menu.

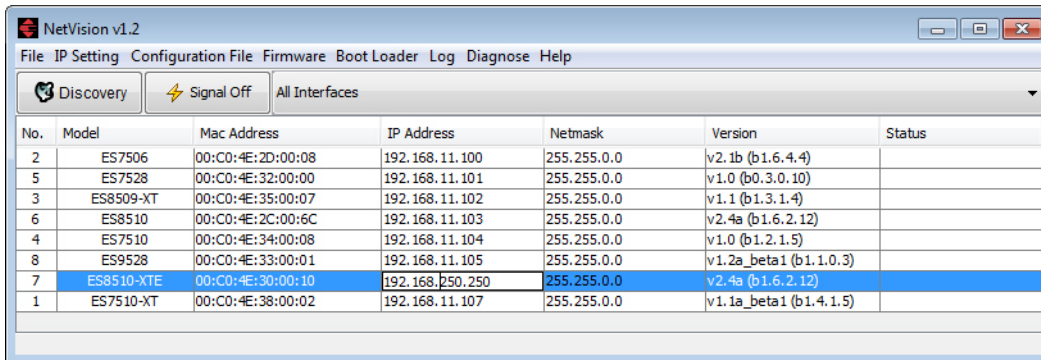

Menu	Option	Description
File	Discovery	Locates all RocketLinx managed switches on the network interface.
	LED Signal	Turns on or off the LEDs on a RocketLinx so that you can locate a specific RocketLinx without verifying the IP or MAC addresses.
	Open Web User Interface	Opens the web user interface for configuration automatically.
	Reboot Device	Reboots the RocketLinx. You can shift-click to reboot multiple RocketLinx switches.
	Load Factory Defaults	Reloads the factory defaults, including, the IP address and subnet mask. See Factory Defaults on Page 57 to reload the factory defaults without resetting the IP address and subnet mask.
	Preference	Sets the Discovery option for manual update (click the Discovery button) or automatically update every xx seconds.
	Exit	Exits NetVision.
IP Setting	Modify IP	Executes the IP address or netmask changes on the RocketLinx. See Programming Network Information on Page 18 for more information.
	Auto-Assign IP	Assigns a range of IP addresses to multiple RocketLinx switches.
Configurati on File	Backup	Creates a backup file for the specified RocketLinx switch.
	Restore	Restores from a selected backup file.
	Load Default	Restores the RocketLinx with the default configuration file.
Firmware	Upgrade	Uploads the firmware that you have selected. The latest firmware file is available on the Comtrol FTP site . New firmware versions may include bug fixes or new features.
Boot Loader	Upgrade	Uploads the Bootloader file that you have selected. The latest Bootloader file is available on the Comtrol FTP site . A new Bootloader version may include bug fixes or new features.
Log	Show Panel	Opens a window in the bottom of the NetVision pane.
	Log Window	Opens a separate window that you can save, if necessary.
Diagnose	SFP Check	Verifies SFP operation.
	Self Test	Performs a self test RocketLinx. You can review the results in the log file.

Programming Network Information

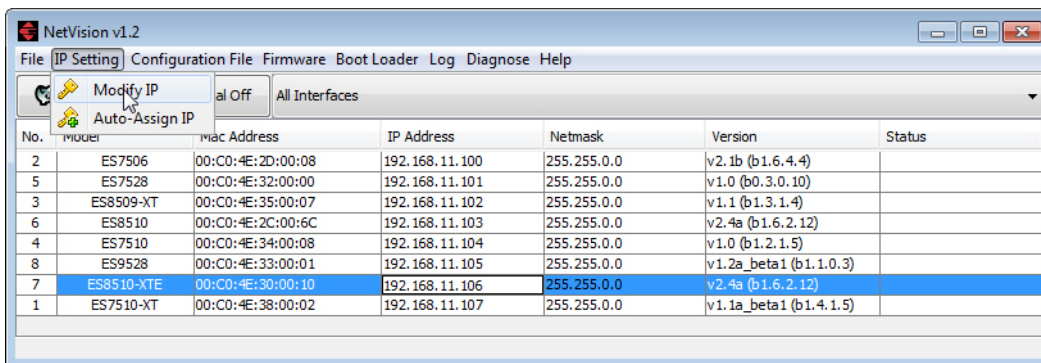

You can use the following procedure to program the network information into the ES8510-XTE.

Note: If you have multiple RocketLinx managed switches that you want to program sequentially, you can use the following procedure and shift-click to highlight multiple switches. Enter an appropriate IP address range, subnet mask, and click Apply.

1. If you have not done so, start NetVision.
2. Click the **Discovery** button, after five seconds the ES8510-XTE should be listed.
3. Highlight the ES8510-XTE, double-click the **IP Address** field and enter a desired IP address.

4. Double-click the **Netmask** field and enter a desired subnet mask.
5. Select the **IP Settings --> Modify IP** menu item to apply the IP address and Netmask changes to the ES8510-XTE. Optionally, you can right-click and click **Change IP**.

6. Click **Yes**.

Note: Most menu items are available by right-clicking your mouse. Many of these functions can also be done using the web user interface or through the Command Line Interface.

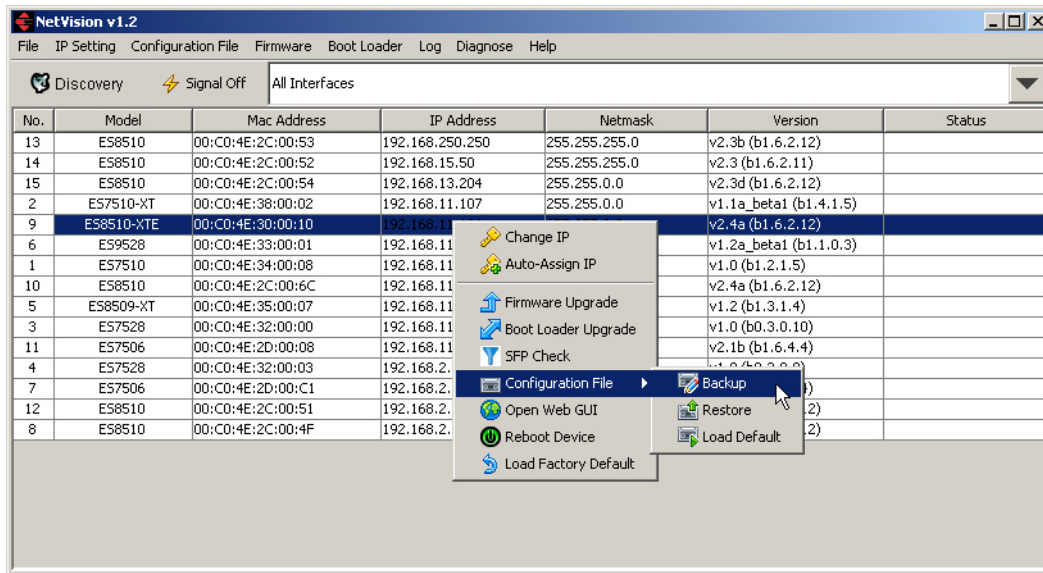

Creating a Backup Configuration File

You can use NetVision to save the current configuration stored in the ES8510-XTE flash using a Windows XP system.

Note: For operating systems newer than Windows XP, use TFTP with the web user interface ([Backup the Configuration - TFTP Server Method](#) on Page 51) or the CLI ([Backup and Restore](#) on Page 136).

The configuration file can be reloaded on the ES8510-XTE or used load the same settings onto another ES8510-XTE. The ES8510-XTE configuration file is a standard text file. You can open the file with Word or Notepad. You can also modify the file, add/remove the configuration settings, and then restore the file back to the ES8510-XTE.

1. Highlight the ES8510-XTE for which you want to create a backup file.
2. Right-click and select **Backup**.

3. Click the **Browse** button and navigate to the location where you want to save the configuration file.
4. Enter the backup file name and click **Open**.

- Click the **Backup** button.

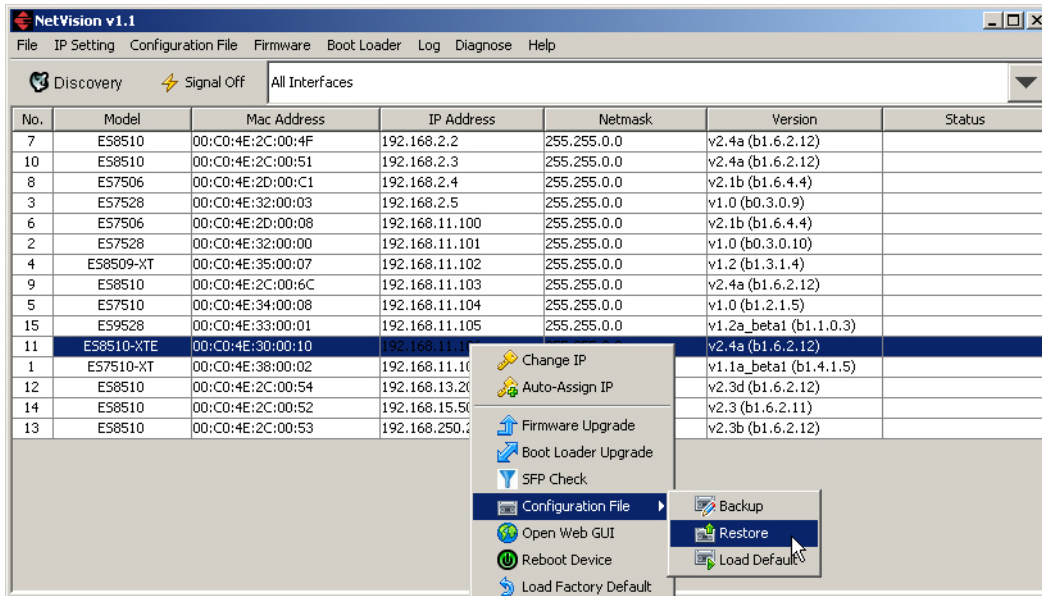

Uploading a Configuration File

Before you can restore a configuration file, you must have saved the backup configuration file using Windows XP. To restore a configuration file on an operating system later than Windows XP, go to [Restore the Configuration - TFTP Server Method](#) on Page 54 or [Backup and Restore](#) on Page 136.

Note: If you are using an operating system later than Windows XP you must have created a backup file using TFTP with the web user interface ([Backup the Configuration - TFTP Server Method](#) on Page 51) or the CLI ([Backup and Restore](#) on Page 136.).

The ES8510-XTE configuration file is a standard text file. You can open the file with Word or Notepad. You can also modify the file, add/remove the configuration settings, and then restore the file back to the ES8510-XTE. You can only load configuration files from the same RocketLinx model.

- Highlight the ES8510-XTE on to which you want to load the configuration file, right-click, and select **Restore**.

- Click the **Browse** button to locate the backup file.

- Highlight the appropriate backup file, and click **Open**.
- Click the **Restore** button.

- Click the **Ok** button to the *Success* message.

Upgrading Firmware

There are several methods that you can use to upload the latest firmware into the ES8510-XTE. Optionally, you can use the web user interface ([Firmware Upgrade](#) on Page 55) or the CLI ([Firmware Upgrade](#) on Page 136).

Use this procedure to upload the latest ES8510-XTE firmware into the RocketLinux using NetVision.

- Locate and download the firmware by selecting the **Software** page that corresponds to your RocketLinux switch by accessing the [Control FTP site](#).
- Highlight the ES8510-XTE (or several ES8510-XTE switches) and note the firmware version.
- Right-click and select **Firmware Upgrade**.
- Browse to the location of the firmware file, select the file, and click **Upgrade**.

Status first displays *Firmware uploading* and then displays *Firmware Burning* in the **Status** field.

- Verify that when the **Status** field is empty, that the version number matches the new version number.
- Click **Discovery** to update the display.

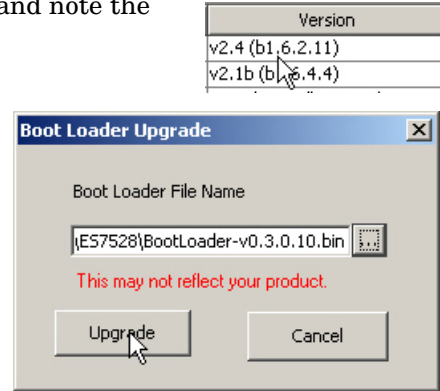

Version
v2.4 (b1.6.2.11)
v1.1b (b1.6.4.4)

Upgrading the Bootloader

Use the following procedure to upload the latest ES8510-XTE Bootloader into the RocketLinx. You cannot use the web user interface or CLI to upload the Bootloader.

1. Locate and download the Bootloader by selecting the **Software** page that corresponds to your RocketLinx switch by accessing the [Control FTP site](#).
2. Highlight the ES8510-XTE switch (or several ES8510-XTE switches) and note the version, which is displayed in parenthesis.
3. Right-click and select **Boot Loader Upgrade**.
4. Browse to the location of the firmware file, select the file, and click **Upgrade**.
5. Click **Discovery** to update the display.
6. Verify that when the **Status** field is empty, that the version number matches the new version number.

Configuration Using the Web User Interface

The ES8510-XTE provides in-band and out-band configuration methods:

- Out-band management means that you configure the ES8510-XTE using the RS-232 console cable and the Command Line Interface (CLI) to access the ES8510-XTE without attaching an admin PC to the network. You can use out-band management if you lose the network connection to the ES8510-XTE. The CLI and Telnet are discussed in [Configuration Using the Command Line Interface \(CLI\)](#) on Page 119.
- In-band management means that you connect remotely using the ES8510-XTE IP address through the network. You can remotely connect with the ES8510-XTE embedded Java applet web user interface or a Telnet console and the CLI. The ES8510-XTE provides HTTP web user interface ([Page 24](#)) and secure HTTPS web user interface ([Page 26](#)) for web management.

Configuration Overview

This subsection discusses a minimum level of configuration required to operate the ES8510-XTE.

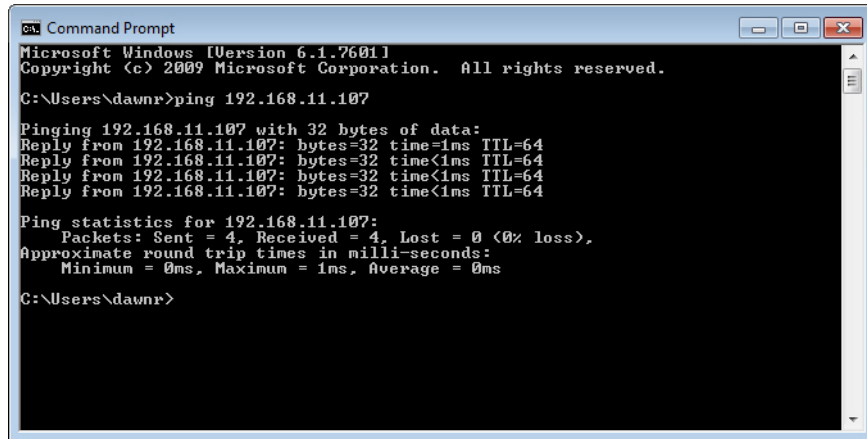

1. If you have not done so, install the hardware, see [Hardware Installation](#) on Page 9.
2. If you are planning on using in-band management, you need to program the ES8510-XTE IP address to meet your network requirements. The easiest way to configure the IP address is using a Windows system and NetVision, see [Programming Network Information](#) on Page 18.
3. Configure other features as desired. You can refer to the [Feature Overview](#) on Page 28 to locate configuration information or use these links:
 - [Basic Settings](#) on Page 37
 - [Port Configuration](#) on Page 58
 - [Network Redundancy](#) on Page 64
 - [VLAN](#) on Page 78
 - [Private VLAN](#) on Page 86
 - [Traffic Prioritization](#) on Page 89
 - [Multicast Filtering](#) on Page 92
 - [SNMP](#) on Page 95
 - [Security](#) on Page 98
 - [Warning](#) on Page 104
 - [Monitor and Diag](#) on Page 110
 - [Device Front Panel](#) on Page 117
 - [Save to Flash](#) on Page 118
 - [Logout](#) on Page 118

Web User Interface

The ES8510-XTE web management page was developed with Java. You can use any standard web browser, which is compatible with Java Runtime to configure and communicate with the ES8510-XTE from anywhere on the network.

If you did not program the IP address for your network using NetVision ([Programming Network Information](#) on Page 18), you need to change your computer IP address to **192.168.250.x** (Network Mask: 255.255.0.0). The default IP address for the ES8510-XTE is *192.168.250.250*.

1. Open a command prompt window and ping the IP address for the ES8510-XTE to verify a normal response time.

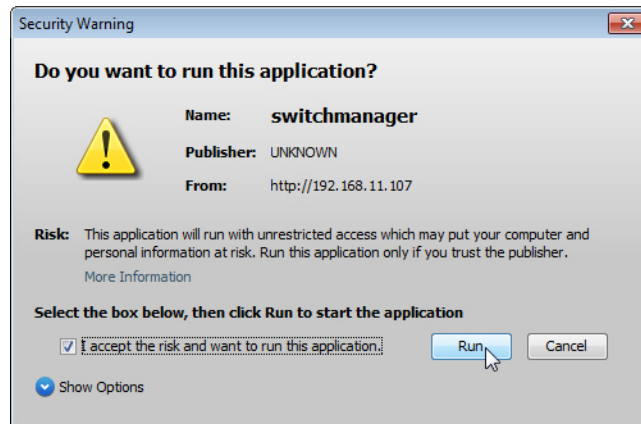

2. Launch the web browser on the PC using one of these methods:
 - Right-click the ES8510-XTE in NetVision and click **Open Web GUI**.
 - Type **http://192.168.250.250** (or the IP address of the switch), and then press **Enter**.

Windows XP - Windows Server 2003

If a *Warning - Security* message appears, click **Always trust content from this publisher** and then **Run** when requested to run the application (IP address).

Windows Vista - Windows 7

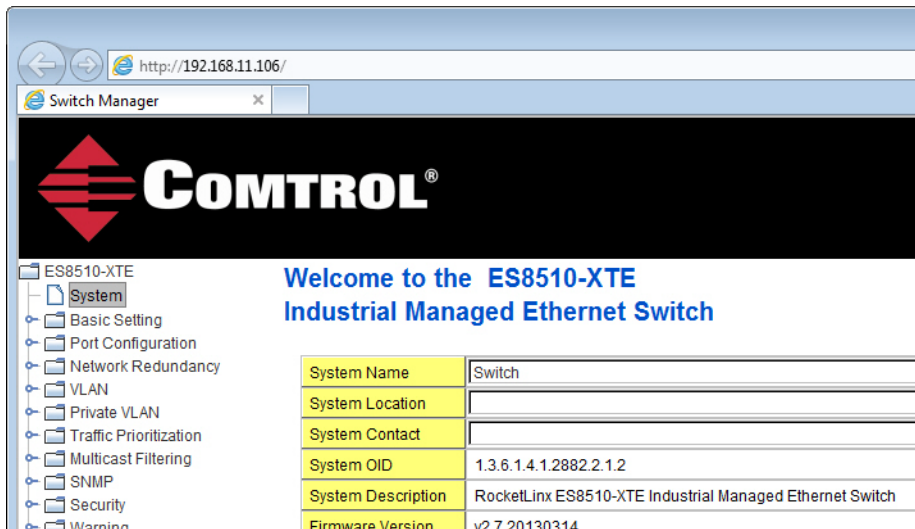

If necessary, click **I accept the risk and want to run this application**, and then **Run** if a security warning popup message appears.

3. Enter the user name, the password, and click **OK**. The default user name and password are both **admin**.

The *Welcome* page of the web management interface then appears.

4. If you have not done so, you can change the ES8510-XTE IP address to meet your network environment.
 - a. Double-click **Basic Setting**.
 - b. Click **IP Configuration**.
To use static addressing, enter a valid IP address, subnet mask and default gateway.
To use DHCP, click **Enable** in the **DHCP Client** drop list.
 - c. Click **Apply**.

You can use the [Feature Overview](#) on Page 28 to locate other features that you may want to configure.

Secure Web User Interface

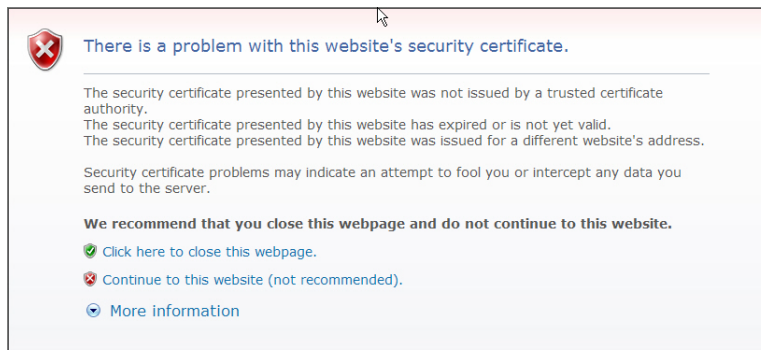

The ES8510-XTE web user interface also provides secured management through an HTTPS login so that all of the configuration commands are secure.

If you did not program the IP address for your network using NetVision ([Programming Network Information](#) on Page 18), you need to change your computer IP address to **192.168.250.x** (Network Mask: 255.255.0.0). The default IP address for the ES8510-XTE is *192.168.250.250*.

1. Open a command prompt window and ping the IP address for the ES8510-XTE to verify a normal response time.

2. Launch the web browser and type **https://192.168.250.250** (or the IP address of the ES8510-XTE).and then press **Enter**.
3. Click **Continue to the web site (not recommended)**.

Windows XP and Windows Server 2003

- a. Click **No** when the popup screen appears and requests you to trust the secured HTTPS connection distributed by the ES8510-XTE.
- b. Click **Always trust content from this publisher** and then **Run** when requested to run the application (IP address) in the *Warning - Security* message.

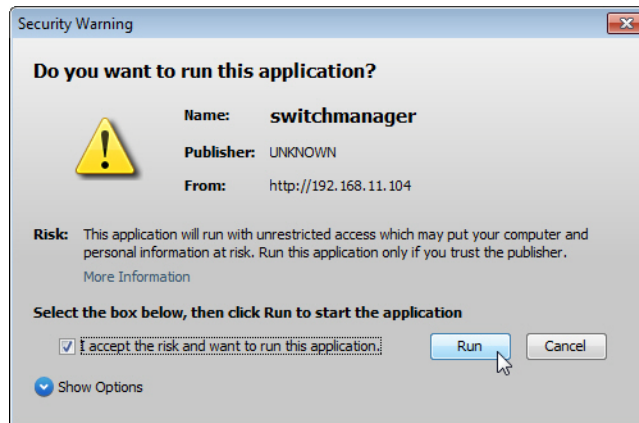

Windows Vista - Windows 7

- a. Click the **Show All Content** button.

- b. If necessary, click **I accept the risk and want to run this application** and then **Run** if a security warning popup message appears.

- 4. Enter the user name and the password and click **OK**. The default user name and password are both **admin**.

The *Welcome* page of the web management interface then appears.

5. If you have not done so, you can change the ES8510-XTE IP address to meet your network environment.
 - a. Double-click **Basic Setting**.
 - b. Click **IP Configuration**.
 To use static addressing, enter a valid IP address, subnet mask and default gateway.
 To use DHCP, click **Enable** in the **DHCP Client** drop list.
 - c. Click **Apply**.

You can use the [Feature Overview](#) on Page 28 to locate other features that you may want to configure.

Feature Overview

The following table provides detailed information about ES8510-XTE features and provides the location of the configuration information in the web user interface.

Type	Category	Details
802.1x Port-Based Network Access Control Configuration	802.1x Configuration on Page 100	<ul style="list-style-type: none"> • System Authentication Control - Enable/Disable • Authentication Method - RADIUS or Local • RADIUS Server - IP Address, Shared Key, Server Port, and Accounting Port • Local RADIUS User - User Name, Password, and VID • Secondary RADIUS Server - IP Address, Shared Key, Server Port, and Accounting Port • Local RADIUS User List

Basic Settings

The *Basic Setting* group allows you the ability to configure switch information, IP address, User name/ Password of the system. It also allows you to do firmware upgrade, backup and restore configuration, reload factory default, and reboot the system.

The following web pages are included in this group:

- [Switch Setting](#) on Page 37
- [Admin Password](#) on Page 38
- [IP Configuration](#) on Page 39
- [Time Setting](#) on Page 41
- [DHCP Server Configuration](#) on Page 44
- [Backup and Restore](#) on Page 48
- [Firmware Upgrade](#) on Page 55
- [Factory Defaults](#) on Page 57
- [System Reboot](#) on Page 57

Optionally, you can use the CLI for configuration, see [Basic Settings \(CLI\)](#) on Page 132.

Switch Setting

You can assign the **System Name**, **Location**, **Contact** and view ES8510-XTE information.

Switch Setting

System Name	ES8510-XTE
System Location	First Floor - North
System Contact	DLR
System OID	1.3.6.1.4.1.2882.2.1.2
System Description	RocketLinx ES8510-XTE Industrial Managed Ethernet Switch
Firmware Version	v2.7 20130314
Device MAC	00:c0:4e:30:00:10

Switch Setting Page	
System Name	You can assign a name to the ES8510-XTE. You can input up to 64 characters. After you configure the name, The CLI system selects the first 12 characters as the name in CLI system.
System Location	You can specify the ES8510-XTE physical location with up to 64 characters.
System Contact	You can specify contact people with up to 64 characters by typing the Administer's name, mail address or other information.
System OID	The SNMP Object ID of the ES8510-XTE. You can follow the path to find its private MIB in an MIB browser. Note: When you attempt to view private MIB, you should first compile private MIB files into your MIB browser.
System Description	RocketLinx ES8510-XTE Industrial Managed Ethernet Switch.

Switch Setting Page (Continued)	
Firmware Version	Displays the firmware version installed in this ES8510-XTE.
Device MAC	Displays a unique hardware address (MAC address) assigned in the factory.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Admin Password

You can change the user name and the password here to enhance security.

Admin Password Page	
Administrator	
Name	You can enter a new user name here. The default name is admin .
Password	You can enter a new password here. The default password is admin .
Confirm Password	You need to type the new password again to confirm it.
RADIUS Server	
RADIUS Server IP	The IP address of the RADIUS server.
Shared Key	The password for communication between switch and RADIUS Server.
Server Port	UDP port of RADIUS server.
Secondary RADIUS Server	
RADIUS Server IP	The IP address of the RADIUS server.
Shared Key	The password for communication between switch and RADIUS Server.
Server Port	UDP port of RADIUS server.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

IP Configuration Page

DHCP Client	You can select to Enable or Disable the DHCP Client function. When the DHCP Client function is enabled, an IP address is assigned to the switch from the network's DHCP server. In this mode, the default IP address is replaced by the one assigned by DHCP server. If DHCP Client is disabled, then the IP address that you specified is used.
IP Address	You can assign the IP address reserved by your network for the ES8510-XTE. If the DHCP Client function is enabled, you do not need to assign an IP address to the ES8510-XTE, because it is overwritten by the DHCP server and displays here. The default IP Address is 192.168.250.250.

IP Configuration Page (Continued)	
Subnet Mask	<p>You can assign the subnet mask for the IP address here. If the DHCP Client function is enabled, you do not need to assign the subnet mask. The default Subnet Mask is 255.255.255.0.</p> <p>Note: <i>In the CLI, the enabled bit of the subnet mask is used to represent the number displayed in the web management interface. For example, 8 represents: 255.0.0.0, 16 represents: 255.255.0.0, 24 represents: 255.255.255.0.</i></p>
Default Gateway	<p>You can assign the gateway for the switch here. The default gateway is 192.168.250.1.</p> <p>Note: <i>In the CLI, use 0.0.0.0/0 to represent the default gateway.</i></p>
DNS Server 1/2	<p>The Domain Name System (DNS) is a hierarchical naming system built on a distributed database for computers, services, or any resource connected to the Internet or a private network. It associates various information with domain names assigned to each of the participating entities. Most importantly, it translates domain names meaningful into the numerical identifiers associated with networking equipment for the purpose of locating and addressing these devices worldwide.</p>
IPv6 Address	<p>You can enter an IPv6 address for the ES8510-XTE.</p> <p>An IPv6 address is represented as eight groups of four hexadecimal digits, each group representing 16 bits (two octets). The groups are separated by colons (:), and the length of IPv6 address is 128bits.</p> <p>The 64-bit interface identifier is automatically generated from the MAC address for the ES8510-XTE using the modified EUI-64 format.</p>
Prefix	<p>This IPv6 prefix specifies the size of a network or subnet. The default is 64.</p>
IPv6 Default Gateway	<p>The IPv6 default gateway IP address identifies the gateway (for example, a router) that receives and forwards those packets whose addresses are unknown to the local network. The agent uses the default gateway address when sending alert packets to the management workstation on a network other than the local network.</p>
IPv6 Neighbor Table	
Neighbor	<p>The <i>IPv6 Neighbor Table</i> lists neighbors of the ES8510-XTE.</p>
Interface	<p>The interface connected to the neighbor.</p>
MAC address	<p>This is the MAC address of the neighbor.</p>
State	<p>This displays the Neighbor Unreachability Detection (NUD) state of the neighbor entry.</p>
Remove	<p>Click the Remove button to remove an IPv6 configuration.</p>
Reload	<p>Click the Reload button to reload IPv6 configuration.</p>
Apply	<p>Click Apply to apply the settings.</p> <p>Note: <i>You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</i></p>

Time Setting

Time Setting allows you to set the time manually or through a Network Time Protocol (NTP) server. NTP is used to synchronize computer clocks on the internet. You can configure NTP settings here to synchronize the clocks of several switches on the network. The ES8510-XTE also provides Daylight Saving functionality.

Time Setting

System Time: Sun Jan 1 00:15:05 2006

Time Setting Source	Manual Setting
Manual Setting	Get Time From PC
Jan	01
, 2006	00 : 15 : 05

Timezone Setting
Timezone (GMT) Greenwich Mean Time: Dublin, Edinburgh, Lisbon, London

<input type="checkbox"/> Daylight Saving Time
Daylight Saving Start 1st Sun in Jan at 00 : 00
Daylight Saving End 1st Sun in Jan at 00 : 00

Apply

Time Setting Page	
Time Setting Source	<p>Manual Setting: Click Manual Setting to change time as needed. You can also click the Get Time from PC button to get PC's time setting for the ES8510-XTE.</p> <p>NTP client: Click Time Setting Source if you want the NTP client to permit the ES8510-XTE to enable the NTP client service. NTP client is automatically enabled if you change the Time Setting Source to NTP Client. The system sends a request packet to acquire current time from the NTP server you assign.</p>
Timezone Setting	Select the time zone where the ES8510-XTE is located. The following table lists the time zones for different locations for your reference. The default time zone is (GMT) Greenwich Mean Time.
Daylight Saving Time	Click the Daylight Saving Time check box and then set the Daylight Saving Time Start and End times. During Daylight Saving Time, the ES8510-XTE time is one hour earlier than the actual time.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

DHCP Server Configuration Page	
DHCP Server	You can select to Enable or Disable the DHCP Server function. The ES8510-XTE assigns a new IP address to link partners.
DHCP Server Configuration	
Network	Enter the IPv4 address for the DHCP server.
Subnet Mask	Enter the subnet mask for the DHCP server.
Default Gateway	Enter the IP gateway address for the DHCP server.
Lease Time	Enter the Lease Time in seconds for the client.
Apply	Click Apply to apply the settings. <i>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</i>
Excluded Address	
IP Address	You can type a specific address into the IP Address field for the DHCP server reserved IP address. The IP address that is listed in the Excluded Address List Table is not assigned to the network device. Add or remove an IP address from the Excluded Address List by clicking Add or Remove .
Manual Binding	
IP Address	The ES8510-XTE provides an IP address binding and removing function. Enter the specified IP address, and then click Add to add a new IP address binding rule for a specified link partner, like a PLC, or any device without DHCP client function. To remove an IP address from the Manual Binding List, highlight the rule and click Remove .
MAC Address	The ES8510-XTE provides a MAC address binding and removing function. Enter the specified MAC address, and then click Add to add a new MAC address binding rule for a specified link partner, like a PLC, or any device without DHCP client function. The MAC address format is xxxx.xxxx.xxxx ; for example, 00C0.4E30.0001. To remove a MAC address from the Manual Binding List, highlight the rule and click Remove .
Port and IP Address	
Port	Enter the client port number for the DHCP server.
IP Address	Enter the client IP address for the DHCP server. After entering the port number and IP address, click Add . To remove a port and associated IP address, click Remove . Click Reload to reload selected port and IP address entries.
Option82 IP Address Configuration	
IP Address	Option 82 IP Address Configuration: fully supports DHCP relay function. The IP address of the Option82 IP address configuration.
Circuit ID	The Circuit ID of the Option82 IP address configuration.

DHCP Server Configuration Page (Continued)	
Remote ID	The Remote ID of the Option82 IP address configuration. After entering the IP Address, Circuit ID, and Remote ID, click Add . Click the Remove button to remove selected Option82 IP Address table entries. Click the Reload button to reload selected Option82 IP Address table entries.
Type	This displays string or hex, depending on the type.

DHCP Leased Entries

The ES8510-XTE provides an assigned IP address.

Index	Binding	IP Address	MAC Address	Lease Time(s)
1	Auto	192.168.11.2	001a.a03d.6344	604600

DHCP Leased Entries Page	
Index	Index of DHCP leased entries.
Binding	Manual or auto binding IP addresses and MAC addresses.
IP Address	The IP address of the leased entry.
MAC Address	The MAC Address of the leased entry.
Lease Time(s)	The lease time of the leased entry (in seconds).
Reload	Click to reload DHCP leased entries.

DHCP Relay Agent

This subsection discusses the DHCP Relay Agent.

Backup and Restore

Use the **Backup** option to save the current configuration saved in the ES8510-XTE flash to a PC/laptop or a TFTP server.

This allows you to use the **Restore** option to restore a configuration file back to the ES8510-XTE or load the same settings to another ES8510-XTE. Before you can restore a configuration file, you must save the backup configuration file in the PC or TFTP server. The ES8510-XTE then downloads this file back into the flash.

The ES8510-XTE configuration file is a standard text file. You can open the file with Word or Notepad. You can also modify the file, add/remove the configuration settings, and then restore the file back to the ES8510-XTE.

There are two modes to backup and restore the configuration file:

- Local File
 - [Backup the Configuration - Local File Method](#) on Page 49
 - [Restore the Configuration - Local Method](#) on Page 50
- TFTP Server
 - [Backup the Configuration - TFTP Server Method](#) on Page 51
 - [Restore the Configuration - TFTP Server Method](#) on Page 54

You can use the **Local File** method if you have a Windows XP system.

If you have Windows Server 2003 through Windows 7, you must use the **TFTP Server** method to backup or restore configuration files.

Backup and Restore

Backup Configuration Local File ▼

Restore Configuration Local File ▼

Restore File Name

Backup & Restore Page	
Backup Configuration	<ul style="list-style-type: none"> • Local File: The ES8510-XTE acts as the file server in Windows XP. Other Windows operating systems must use the TFTP method. This mode is only provided by the web user interface as the backup and restore functions are not supported by the CLI. For procedures, see Backup the Configuration - Local File Method on Page 49. • TFTP Server: The ES8510-XTE acts as a TFTP client. This mode can be used in both the CLI and web user interface. For procedures, see Backup the Configuration - TFTP Server Method on Page 51. <p>Note: Pointing to the wrong file causes the entire configuration to be skipped.</p>
Backup	Backup can only backup the configuration file to your PC or a TFTP server.
Restore Configuration	You can select local file in Windows XP or TFTP server in all Windows operating systems to restore the startup configuration. For procedures, see Restore the Configuration - Local Method on Page 50 or Restore the Configuration - TFTP Server Method on Page 54.
Restore	Click to restore ES8510-XTE startup configurations to the ES8510-XTE.

Backup & Restore Page (Continued)

Backup Configuration	<ul style="list-style-type: none"> • Local File: The ES9528 acts as the file server in Windows XP. Other Windows operating systems must use the TFTP method. This mode is only provided by the web user interface as the backup and restore functions are not supported by the CLI. For procedures, see Backup the Configuration - Local File Method. • TFTP Server: The ES9528 acts as a TFTP client. This mode can be used in both the CLI and web user interface. For procedures, see Backup the Configuration - TFTP Server Method. <p><i>Note: Pointing to the wrong file causes the entire configuration to be skipped.</i></p>
<ul style="list-style-type: none"> • The ES8510-XTE provides a default configuration file in the ES8510-XTE. To load the default configuration file, you can use the Reset on the Factory Defaults page on Page 57 or the Reload command in the CLI (Page 136). • You can use the CLI to view the latest settings running in the ES8510-XTE. The information are the settings you have configured but have not yet saved to the flash. The settings must be saved to the flash in order to work after a power recycle. Use the running-config command to view the configuration file, see Show Running Configuration on Page 136. • After you save the running-config to flash, the new settings are kept and work after the power is cycled. Use the show startup-config to view it in the CLI. The Backup command can only backup the configuration file to your PC or TFTP server. 	

Backup the Configuration - Local File Method

You can use **Local File** method to backup (or restore) with a Windows XP system.

Note: *If you have a Windows Server 2003 through Windows 7 operating system, you must use the TFTP server method ([Page 51](#)).*

1. Open the web user interface for the ES8510-XTE and open the **Backup and Restore** page under *Basic Settings*.
2. Select **Local File** for **Backup Configuration**.
3. Click the **Folder** icon, browse to the location that you want to store the backup configuration file, enter a file name, and click **Open**.

Note: *You cannot use spaces in the path to the target file.*

- Click the **Backup** button and then click **Ok** when the *Success Message* appears. .

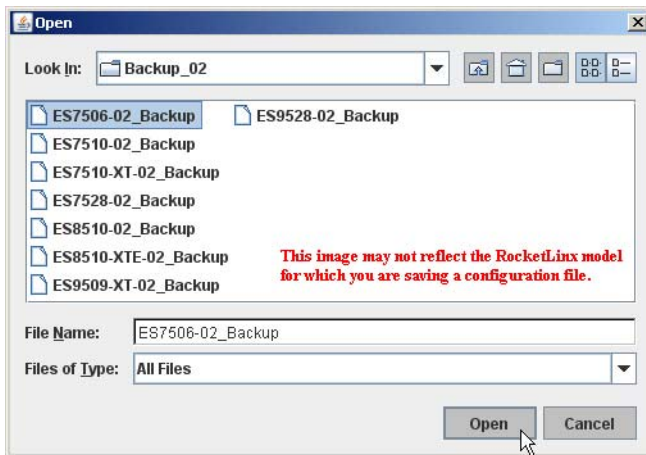

Restore the Configuration - Local Method

You can use **Local File** method to restore with a Windows XP system.

Note: If you have a Windows Server 2003 through Windows 7 operating system, you must use the TFTP server method ([Page 54](#)).

- Open the web user interface for the ES8510-XTE and open the **Backup and Restore** page under *Basic Settings*.
- Select **Local File** as the **Restore Configuration**.
- Click the **Folder** icon, browse to the location where the backup configuration file is located., highlight the file, and click **Open**.

- Click the **Restore** button.
- Click **Yes** to the *Confirm Dialog*.

- Click **Ok** to the *Success Message*.

Backup the Configuration - TFTP Server Method

You must use a TFTP server to create or load backup files if you are using the following operating systems:

- Windows Server 2003
- Windows Vista
- Windows Server 2008
- Windows 7

If you do not have a TFTP server, you can download one from Control using the [Start the TFTP Server](#) subsection. You need to disable the Windows firewall, you can use the procedures in [Disable the Windows Firewall](#) on Page 52. After opening a TFTP server and disabling you can do the following:

- [Backup the Configuration - TFTP Server Method](#) on Page 51
- [Restore the Configuration - TFTP Server Method](#) on Page 54

Start the TFTP Server

Use this procedure to download either the 32-bit or the 64-bit version from Control.

1. If necessary, download the appropriate **.zip** file for your operating system from: ftp://ftp.control.com/contribs/free_3rd_party_utils/tftp_server/ to your system and unzip the file.
2. Execute the TFTP server application, click **Allow access**, and the TFTP server opens.
3. Leave the TFTP server open and go to the next subsection to temporarily disable the firewall.

TFTP Server IP Address

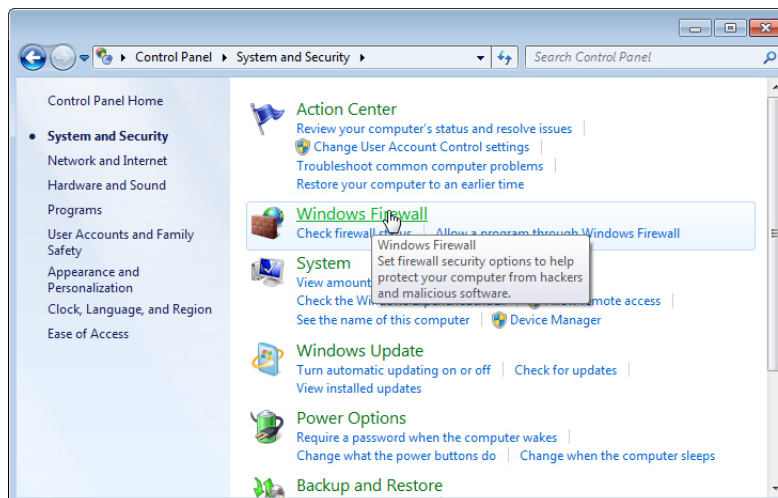

Disable the Windows Firewall

Use the following procedure to temporarily disable the system firewall. This example uses Windows 7.

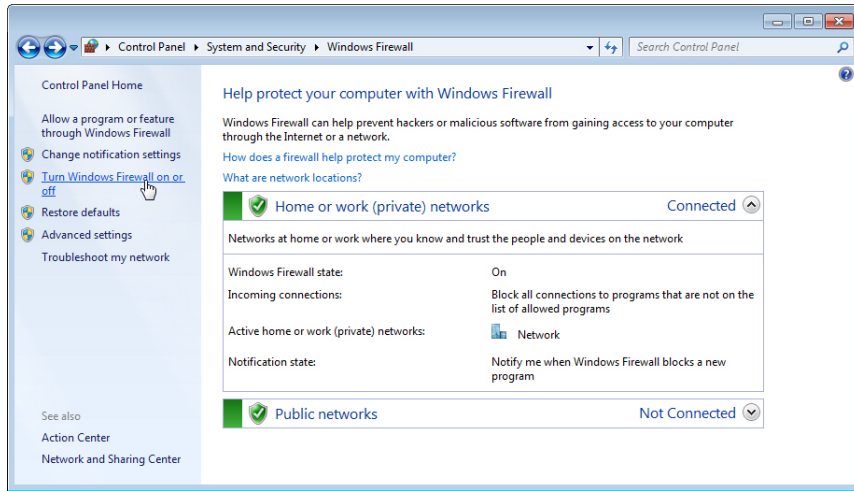

1. From the **Start** button, click **Control Panel**, and click **System and Security**.

2. Click **Windows Firewall**.

3. Click **Turn Windows Firewall on or off**.

4. Click **Turn off Windows Firewall (not recommended)** for private and public networks and **Ok**.

5. Minimize the **Control Panel** and go to the appropriate procedure, [Create a Backup File](#) on Page 53 or [Restore the Configuration - TFTP Server Method](#) on Page 54.

Create a Backup File

You must have a TFTP server open and disabled the Windows firewall for this following procedure to work.

1. Open the web user interface for the ES8510-XTE and open the **Backup and Restore** page under *Basic Settings*.
2. Select **TFTP Server** for the **Backup Configuration**, enter the IP address of the TFTP server, enter a **Backup File Name**, and click the **Backup** button.

Note: You cannot use spaces in the path to the target file.

3. Click **Ok** to close the popup message.

Note: Make sure that you enable your Windows firewall when you have completed these tasks.

The backup file is located in the same directory that the TFTP server resides.

Restore the Configuration - TFTP Server Method

To restore a configuration file, you must open a TFTP server and disable the Windows firewall. If necessary, use [Start the TFTP Server](#) on Page 51 and [Disable the Windows Firewall](#) on Page 52.

The backup file must be located in the same directory that the TFTP server resides for this procedure to work.

1. Open the web user interface for the ES8510-XTE, open the **Backup and Restore** page under *Basic Settings*.
2. Select **TFTP Server** for the **Restore Configuration**, enter the IP address of the TFTP server, enter the **Backup File Name**, and click the **Restore** button.
3. Click **Yes** to the *Confirm Dialog* message.

4. Click **Ok** to the *Success Message*.

Note: Make sure that you enable your Windows firewall when you have completed these tasks.

Firmware Upgrade

Use this section to update the ES8510-XTE with the latest firmware. Comtrol provides the latest firmware on the Comtrol [FTP site](#). The new firmware may include new features, bug fixes, or other software changes. Comtrol Technical Support suggests you use the latest firmware before installing the ES8510-XTE at a customer site.

Note: *Optionally, you can use NetVision to upload the latest firmware. If you need to upload a new version of the Bootloader, you must use NetVision. You cannot use the web user interface or CLI to upload the Bootloader.*

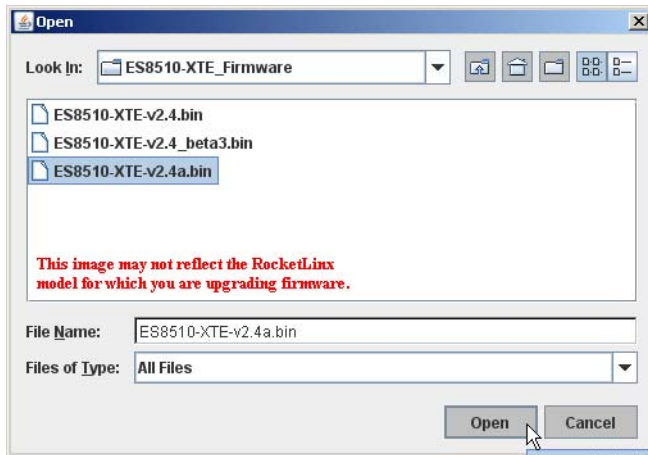

Firmware Upgrade Page	
System Firmware Version	The firmware version on the ES8510-XTE. You should check the version number after the switch reboots.
System Firmware Date	The build date of the firmware on the ES8510-XTE.
Firmware Upgrade	<ul style="list-style-type: none"> • Local File (Windows XP) - see Upgrading Firmware (Local File) on Page 55 • TFTP Server (Window Server 2003 - Windows 7) - see Upgrading Firmware (TFTP Server) on Page 56

Note: *The system is automatically rebooted after you finish upgrading firmware. You should alert the attached users before updating the firmware that network interruption may occur.*

Upgrading Firmware (Local File)

You can use this procedure to upgrade the firmware (not Bootloader) using Windows XP.

1. Open the web user interface for the ES8510-XTE, open the **Firmware Upgrade** page under *Basic Settings*.
2. Select **Local** in the **Firmware Upgrade** drop list.
3. Click the **folder** icon, browse to the firmware location, highlight the **.bin** file, and click **Open**.

Firmware Upgrade

System Firmware Version: v1.1a_beta1
 System Firmware Date: 20120801-09:55:44
 WebManager Build Date: 2012-05-30 17:24:25

Firmware Upgrade Local File

Firmware File Name

This image may not reflect your firmware information.

Note: When firmware upgrade is finished, the switch will restart automatically.

Upgrade

4. Click the **Upgrade** button.

5. Click **Yes** to the *Confirm Dialog* message.
6. Click **Ok** to the *Warning Message*.

7. Click **Ok** to close the *Success Message*.

Note: After the firmware has successfully uploaded, you should close and re-open the browser to clear the Java Virtual Machine cache.

Upgrading Firmware (TFTP Server)

You can use this procedure to upgrade the firmware (not Bootloader) using Windows operating systems.

1. Open a TFTP server, if necessary, see [Start the TFTP Server](#) on Page 51.
2. Place the ES8510-XTE **.bin** file in the same directory where the TFTP server resides.
3. Disable the Windows firewall, if necessary, see [Disable the Windows Firewall](#) on Page 52.
4. If necessary, open the web user interface, open the **Firmware Upgrade** page in the *Basic Settings* group.
5. Select **TFTP Server** in the **Firmware Upgrade** drop list.
6. Enter the IP address of the TFTP server, enter the firmware file name, and click the **Upgrade** button.
7. Click **Yes** to the *Confirm Dialog* message.

Firmware Upgrade

System Firmware Version: v1.1a_beta1
System Firmware Date: 20120801-09:55:44
WebManager Build Date: 2012-08-01 10:05:09

Firmware Upgrade TFTP Server

TFTP Server IP	192.168.11.200
Firmware File Name	ES7510-XT-v1.1.bin

Note: When firmware upgrade is finished, the switch will restart automatically.

This image may not reflect your firmware information.

8. Click **Ok** to the *Warning Message*.

9. Click **Ok** to close the *Success Message*.
10. Enable the Windows firewall.

Note: After the firmware has successfully uploaded, you should close and re-open the browser to clear the Java Virtual Machine cache.

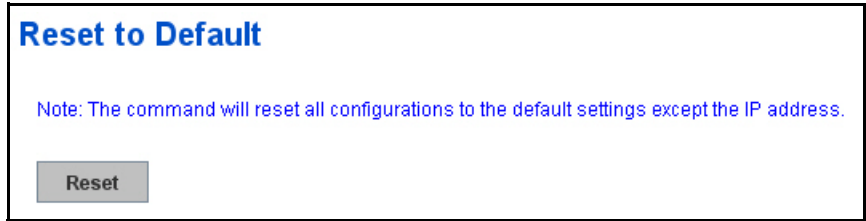

Factory Defaults

You can reset all the configurations of the switch to default settings. Optionally, you can use the [Reset Button](#) on Page 14, which also resets the IP address with the default configuration values.

Click **Reset**, if you want the ES8510-XTE to reset all configurations to factory default settings.

The system displays a popup message window after finishing. The default settings work after rebooting the ES8510-XTE.

Click **Yes** in the popup alert screen to reset the configuration to the factory defaults.

The following popup message screen shows you that the ES8510-XTE has been reset to factory defaults. Click **OK** to close the screen and then go to the **Reboot** page to reboot the switch.

Click **OK**. The system automatically reboots the ES8510-XTE.

Note: *If you have already configured the IP of the ES8510-XTE to another IP address, when you use this procedure, the software does not reset the IP address to the default IP address. The ES8510-XTE IP address does not change so that you can still connect the switch through the network.*

System Reboot

System Reboot allows you to reboot the device. Some of the feature changes require you to reboot the system. Click **Reboot** to reboot your ES8510-XTE.

Note: *Before rebooting, remember to click **Save** to save your settings. Otherwise, the settings you are lost when the ES8510-XTE is powered off.*

Click **Yes**. The switch reboots immediately.

Click **Ok** so that the ES8510-XTE reboots.

Port Configuration

The *Port Configuration* group allows you to enable/disable port state, or configure port auto-negotiation, speed, duplex, flow control, port aggregation settings (port trunking), and rate limit control. It also allows you to view port status and aggregation information. The following pages are included in this group:

- [Port Control](#)
- [Port Status](#) on Page 60
- [Rate Control](#) on Page 61
- [Port Trunking](#) on Page 62

Optionally, you can use the CLI for configuration, see [Port Configuration \(CLI\)](#) on Page 138.

Port Control

Port Control page allows you to enable/disable port state, or configure the port auto-negotiation, speed, duplex, and flow control.

Port Control

Port	State	Speed/Duplex	Flow Control	Description
1	Enable	AutoNegotiation	Disable	
2	Enable	AutoNegotiation	Disable	
3	Enable	AutoNegotiation	Disable	
4	Enable	AutoNegotiation	Disable	
5	Enable	AutoNegotiation	Disable	
6	Enable	AutoNegotiation	Disable	
7	Enable	AutoNegotiation	Disable	
8	Enable	AutoNegotiation	Disable	
9	Enable	AutoNegotiation	Disable	
10	Enable	AutoNegotiation	Disable	

Apply

- 10 Full
- 10 Half
- 100 Full
- 100 Half

Select the port you want to configure and make changes to the port. The following table provides information about the different port control options.

Port Configuration Page	
State	You can enable or disable the state of this port. Once you click Disable , the port stops to link to the other end and stops to forward any traffic. The default setting is Enable which means all the ports are workable when you receive the ES8510-XTE.
Speed/Duplex	You can configure port speed and duplex mode of each port. Below are the selections you can choose: <ul style="list-style-type: none"> • Fast Ethernet Ports 1~ 10 (fa1~fa10) <ul style="list-style-type: none"> - Auto Negotiation (default) - 10M full-duplex (10 Full) - 10M half-duplex (10 Half) - 100M full-duplex (100 Full) - 100M half-duplex (100 Half)
Flow Control	Symmetric means that you need to activate the flow control function of the remote network device in order to let the flow control of that corresponding port on the switch to work. Disable (default) means that you do not need to activate the flow control function of the remote network device, as the flow control of that corresponding port on the switch works.
Description	Click this field if you want to enter a port description.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Technical Tip:

If both ends are not at the same speed, they cannot link with each other. If both ends are not in the same duplex mode, they are connected by half-duplex mode.

Port Status

The Port Status page displays the current port status.

Port Status

Port	Type	Link	State	Speed/Duplex	Flow Control	SFP Vendor	Wavelength	Distance
1	100BASE-TX	Down	Enable	--	Disable	--	--	--
2	100BASE-TX	Down	Enable	--	Disable	--	--	--
3	100BASE-TX	Down	Enable	--	Disable	--	--	--
4	100BASE-TX	Up	Enable	100 Full	Disable	--	--	--
5	100BASE-TX	Down	Enable	--	Disable	--	--	--
6	100BASE-TX	Up	Enable	100 Full	Disable	--	--	--
7	100BASE-TX	Down	Enable	--	Disable	--	--	--
8	100BASE-TX	Down	Enable	--	Disable	--	--	--
9	100BASE-TX	Down	Enable	--	Disable	--	--	--
10	100BASE-TX	Down	Enable	--	Disable	--	--	--

SFP DDM

Port	SFP Scan / Eject	SFP DDM	Temperature (°C)		Tx Power (dBm)		Rx Power (dBm)	
			Current	Range	Current	Range	Current	Range
8	Scan	Disable	--	--	--	--	--	--
9	Scan	Disable	--	--	--	--	--	--
10	Scan	Disable	--	--	--	--	--	--

Port Status Page	
Type	100BASE-TX displays for Fast Ethernet ports
Link	Shows link status; Up means the link is up and Down means that the link is down.
State	Shows the port state. If the state is enabled it displays Enable . If the port is disabled or shutdown, it displays Disable .
Speed/Duplex	Current working status of the port.
Flow Control	The state of the flow control.
SFP Vendor	Vendor name of the SFP transceiver that is plugged into the SFP port or ports.
Wavelength	The wave length of the SFP transceiver that is plugged into the SFP port or ports.
Distance	The distance of the SFP transceiver that is plugged into the SFP port or ports.
Temperature	Displays the current temperature detected and acceptable temperature range for the DDM SFP transceiver.
Tx Power (dBm)	Displays the current transmit power detected and acceptable Tx power range for the DDM SFP transceiver.
Rx Power (dBm)	Displays the current received power and acceptable Rx power range for the DDM SFP transceiver.
Scan All	Click the Scan All button to scan for all SFPs.
Eject All	You can eject one or all of the DDM SFP transceivers. To eject all of the SFPs, click Eject All .

Note: Most of the SFP transceivers provide vendor information which allows the ES8510-XTE to read it. The user interface can display vendor name, wave length, and distance of all Comtrol SFP transceiver models. If you see Unknown info, it may mean that the vendor does not provide their information or that the information of their transceiver cannot be read.

If the plugged DDM SFP transceiver is not certified by Comtrol, the DDM function is not supported, but the communication is not disabled.

Rate Control

Rate limiting is used to control the rate of traffic that is sent or received on a network interface. For ingress rate limiting, traffic that is less than or equal to the specified rate is received, whereas traffic that exceeds the rate is dropped. For egress rate limiting, traffic that is less than or equal to the specified rate is sent, whereas traffic that exceeds the rate is dropped.

Rate Control

Limit Packet Type and Rate

Port	Ingress Rule		Egress Rule	
	Packet Type	Rate(Mbps)	Packet Type	Rate(Mbps)
1	Broadcast Only	8	All	0
2	Broadcast Only	8	All	0
3	Broadcast Only	8	All	0
4	Broadcast Only	8	All	0
5	Broadcast Only	8	All	0
6	Broadcast Only	8	All	0
7	Broadcast Only	8	All	0
8	Broadcast Only	8	All	0
9	Broadcast Only	8	All	0
10	Broadcast Only	8	All	0

Apply

Rate Control Page	
Ingress Packet Type	<p>You can select the packet type that you want to filter. The Ingress packet types supported are:</p> <ul style="list-style-type: none"> Broadcast/Multicast/Unknown Unicast Broadcast/Multicast Broadcast All <p>The Egress rate supports all types of packets.</p>
Bandwidth	<p>All ports support port Ingress and Egress rate control. For example, assume Port 1 is 10Mbps, you can set its effective Egress rate at 2Mbps, Ingress rate at 1Mbps. The ES8510-XTE performs the Ingress rate by packet counter to meet the specified rate.</p> <ul style="list-style-type: none"> Ingress Ingress rate in Mbps, the rate range is from 1 Mbps to 100 Mbps and zero means no limit. The default value is 8Mbps Egress The default value is no-limit. Egress rate limiting has an effect on all types of packets, including Unicast, Multicast and Broadcast packets.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

Port Trunking

Port Trunking allows you to group multiple Ethernet ports in parallel to increase link bandwidth. The aggregated ports can be viewed as a physical port that has a bandwidth equal to the combined bandwidth of each trunked port. The member ports of the same trunk group can balance the loading and backup for each other. The Port Trunking feature is usually used when you need higher bandwidth for the network backbone. This is an inexpensive way for you to transfer more data.

The aggregated ports can interconnect to the another switch that also supports Port Trunking. Control supports two types of port trunking:

- Static Trunk
- IEEE 802.3ad

There are some different descriptions for the port trunking. Different manufacturers may use different descriptions for their products, like Link Aggregation Group (LAG), Link Aggregation Control Protocol, Ethernet Trunk, or Ether Channel.

When the other end uses IEEE 802.3ad LACP, you should assign IEEE 802.3ad LACP to the trunk. When the other end uses non-802.3ad, you can then use Static Trunk.

There are two pages for port trunking, [Aggregation Setting](#) on Page 62 and [Aggregation Status](#) on Page 63.

Aggregation Setting

Use the *Port Trunk - Aggregation Setting* page to set up port trunking.

Port Trunk - Aggregation Setting

Port	Group ID	Type
1	None	Static
2	None	Static
3	None	Static
4	None	Static
5	None	Static
6	None	Static
7	None	Static
8	None	Static
9	None	Static
10	None	Static

Note: The port parameters of the trunk members should be the same.

Apply

Aggregation Setting Page

Trunk Size	The ES8510-XTE can support up to 5 trunk groups. Each trunk group can support up to 8 members. The ports should use the same speed and duplex.
Group ID	Group ID is the ID for the port trunking group. Ports with same group ID are in the same group.
Trunk Type	Static or 802.3ad LACP . Each trunk group can only support Static or 802.3ad LACP . Non-active ports cannot be setup here.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Aggregation Status

The *Port Trunk - Aggregation Information* page shows the status of port aggregation. Once the aggregation ports are negotiated, you see the following status.

Port Trunk - Aggregation Information

Group ID	Type	Group Member		
		Aggregated	Individual	Link Down
Trunk 1				
Trunk 2				
Trunk 3	LACP		1	2
Trunk 4				
Trunk 5				

Reload

Aggregation Status Page	
Group ID	Displays Trunk 1 to Trunk 5 set up.
Type	The Type is Static or LACP . Static means that LACP is disabled and configured statically by the Administrator.
Aggregated	When LACP links, you can see the member ports in the Aggregated column.
Individual	When LACP is enabled, member ports of LACP group that are not connected to the correct LACP member ports are displayed in the Individual column.
Link Down	When LACP is enabled, member ports of LACP group that are not linked up are displayed in the Link Down column.
Reload	Click Reload to reload aggregation settings.

Network Redundancy

It is critical for industrial applications that the network remains running at all times. The ES8510-XTE supports:

- Standard Rapid Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP)
The ES8510-XTE supports RSTP versions IEEE 802.1D-2004, IEEE 802.1D-1998 STP, and IEEE 802.1w RSTP.
- Multiple Spanning Tree Protocol (MSTP)
MSTP implements IEEE 802.1s, which uses RSTP for rapid convergence, enables VLANs to be grouped into a spanning-tree instance, with each instance having a spanning-tree topology independent of other spanning-tree instances. This architecture provides multiple forwarding paths for data traffic, enables load balancing, and reduces the number of spanning-tree instances required to support a large number of VLANs. MSTP was originally defined in the IEEE 802.1s and later merged into the IEEE 802.1Q-2003 specification.
- Redundant Ring
The Redundant Ring features 0 ms for restore and less than 5 ms for fail over for copper.
- Rapid Dual Homing (RDH)
Advanced RDH technology allows the ES8510-XTE to connect with a core managed switch easily. With RDH technology, you can also couple several Rapid Super Rings or RSTP groups together, which is also known as Auto Ring Coupling.

The following pages are included in this group:

- [STP Configuration](#) on Page 65
- [STP Port Configuration](#) on Page 66
- [STP Information](#) on Page 67
- [MSTP Configuration](#) on Page 69
- [MSTP Port Configuration](#) on Page 71
- [MSTP Information](#) on Page 72
- [Redundant Ring](#) on Page 74
- [Redundant Ring Information](#) on Page 76
- [Loop Protection](#) on Page 77

Optionally, you can use the CLI to configure these features, see [Network Redundancy \(CLI\)](#) on Page 141.

STP Configuration

This page allows you to select the STP mode and configure the global STP/RSTP bridge configuration. Spanning Tree Protocol (STP; IEEE 802.1D) provides a loop-free topology for any LAN or bridged network.

Rapid Spanning Tree Protocol (RSTP; IEEE 802.1w) is an evolution of the Spanning Tree Protocol (STP), and was introduced with the IEEE 802.1w standard, and provides faster spanning tree convergence after a topology change. In most cases, IEEE 802.1w can also revert back to IEEE 802.1D in order to interoperate with legacy bridges on a per-port basis. The new edition of the IEEE 802.1D standard, IEEE 802.1D-2004, incorporates the IEEE 802.1t-2001 and IEEE 802.1w standards.

Multiple Spanning Tree Protocol (MSTP; IEEE 802.1s) which uses RSTP for rapid convergence, enables VLANs to be grouped into a spanning-tree instance, with each instance having a spanning-tree topology independent of other spanning-tree instances. This architecture provides a loop-free topology with load balancing while reducing the number of spanning-tree instances required to support a large number of VLANs. MSTP was originally defined in the IEEE 802.1s and later merged into the IEEE 802.1Q-2003 specification.

STP Port Configuration Page	
STP State	You can enable/disable STP/RSTP/MSTP on a port by port basis. You can disable the STP state when connecting a device in order to avoid STP waiting periods.
Path Cost	The cost of the path to the other bridge from this transmitting bridge at the specified port. Enter a number from 1 through 200000000.
Priority	Decide which port should be blocked by priority on your LAN. Enter a number from 0 through 240 in increments of 16.
Link Type	Some of the rapid state transactions that are possible within RSTP are dependent upon whether the port in question is connected to exactly one other bridge (that is, it is served by a point-to-point LAN segment), or if it is connected to two or more bridges (that is., it is served by a shared medium LAN segment). This configuration allows the p2p status of the link to be controlled by an administrator.
Edge Port	Present in implementations that support the identification of edge ports. All ports directly connected to end stations cannot create bridging loops in the network and can thus directly transition to forwarding, and skipping the listening and learning stages. When a non-bridge device connects an edge port, this port is in a blocking state and turn to forwarding state in 2*Hello Time seconds. When the bridge device connects an edge port, this port is a non-edge port automatic.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

MSTP Configuration

Multiple Spanning Tree Protocol (MSTP) is a direct extension of RSTP. It can provide an independent spanning tree for different VLANs. It simplifies network management, creates a faster convergence than RSTP by limiting the size of each region, and prevents VLAN members from being segmented from the rest of the group (as sometimes occurs with IEEE 802.1D STP).

While using MSTP, there are some new concepts of network architecture. A switch may belong to different groups, act as root or designate switch, or generate BPDU packets for the network to maintain the forwarding table of the spanning tree. MSTP can also provide load balancing between switches.

One VLAN can be mapped to a Multiple Spanning Tree Instance (MSTI). The maximum number of instances that the ES8510-XTE supports is 16, with a range from 0-15. The MSTP builds a separate Multiple Spanning Tree (MST) for each instance to maintain connectivity among each of the assigned VLAN groups. An Internal Spanning Tree (IST) is used to connect all the MSTP switches within an MST region. An MST Region may contain multiple MSTP instances.

The following figure shows a MSTP instance with two VLANs. Each instance has a root node and forwarding paths.

A Common Spanning Tree (CST) interconnects all adjacent MST regions and acts as a virtual bridge node for communications with STP or RSTP nodes in the global network. MSTP connects all bridges and LAN segments with a single Common Internal Spanning Tree (CIST). The CIST is formed as a result of the running spanning tree algorithm between switches that support the STP, RSTP, or MSTP protocols.

The following diagram shows a CST attached to a larger network. In this network, a Region may have different instances and its own forwarding path and table, however, the CST acts as a single bridge.

This is the *MSTP Configuration* page.

Redundant Ring

The most common industrial network redundancy is to form a ring or loop. Typically, managed switches are connected in series and the last switch is connected back to the first one. In such connection, you can implement Redundant Ring technology.

Redundant Ring

New Ring

Ring ID	Name
<input type="text"/>	<input type="text"/>
<input type="button" value="Add"/>	

Ring Configuration

ID	Name	Version	Device Priority	Ring Port1	Path Cost	Ring Port2	Path Cost	Rapid Dual Homing	Ring Status
5	Ring5	Rapid Super... <div style="border: 1px solid black; padding: 2px; width: fit-content;"> Super Ring Rapid Super Ring </div>	128	Port 1	128	Port 2	128	Disable	Disable

Redundant Ring Page	
New Ring (Ring ID/Name)	To create a Redundant Ring enter the Ring ID, which has range from 0 to 31. If the name field is left blank, the name of this ring is automatically named with the Ring ID. The maximum number of rings is 32. <i>Note: Once a ring is created, you cannot change it.</i>
Ring Configuration	
ID	Once a Ring is created, the Ring ID appears, and cannot be changed. In multiple ring environments, the traffic can only be forwarded under the same Ring ID. Remember to check the Ring ID when there are more than one ring in existence.
Name	This field shows the name of the Ring. If it is not entered when creating, it is automatically named by the rule <i>RingID</i> .
Version	The version of Ring can be changed here, the choices are Rapid Super Ring or Super Ring .
Device Priority	The switch with highest priority (highest value) is automatically selected as the Ring Master (RM). When one of the ring ports on this switch becomes a forwarding port and the other one becomes a blocking port. If all of the switches have the same priority, the switch with the highest MAC address is selected as the Ring Master.
Ring Port1	In a Rapid Super Ring environment, you should have two Ring ports. Whether this switch is a Ring Master or not. When configuring Rapid Super Rings , two ports should be selected to be Ring ports. For a Ring Master, one of the Ring Ports becomes the forwarding port and the other one becomes the blocking port.

Redundant Ring Page (Continued)	
Path Cost	Change the Path Cost of Ring Port1, if this switch is the Ring Master of a Ring, then it determines the blocking port. The port with higher Path Cost in the two Ring Ports becomes the blocking port, If the Path Cost is the same, the port with larger port number becomes the blocking port.
Ring Port2	Assign another port for ring connection.
Path Cost	Change the Path Cost of Ring Port2.
Rapid Dual Homing	<p>Rapid Dual Homing is an important feature of Rapid Super Ring redundancy technology. When you want to connect multiple RSR or form redundant topology with other vendors, RDH allows you to have a maximum of seven multiple links for redundancy without any problem.</p> <p>In RDH, you do not need to configure a specific port to connect to other protocol. The RDH selects the fastest link for the primary link and blocks all the other links to avoid a loop. If the primary link failed, RDH automatically forwards the secondary link for a network redundant. If there are more connections, they are standby links and are recovered if both primary and secondary links are broken.</p>
Ring status	To Enable/Disable the Ring, remember to enable the Ring after you add it.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

VLAN

A Virtual LAN (VLAN) is a logical grouping of nodes for the purpose of limiting a broadcast domain to specific members of a group without physically grouping the members. The VLAN allows you to isolate network traffic so that only members of the VLAN could receive traffic from the same VLAN members. Basically, creating a VLAN from a switch is the logical equivalent of physically reconnecting a group of network devices to another Layer 2 switch, without actually disconnecting these devices from their original switches.

The ES8510-XTE supports IEEE 802.1Q VLAN, which is also known as Tag-Based VLAN. This Tag-Based VLAN allows a VLAN to be created across different switches. IEEE 802.1Q tag-based VLAN makes use of VLAN control information stored in a VLAN header attached to IEEE 802.3 packet frames. This tag contains a VLAN Identifier (VID) that indicates which VLAN a frame belongs to. Since each switch only has to check a frame's tag, without the need to dissect the contents of the frame, this saves a lot of computing resources within the ES8510-XTE.

The following figure displays an IEEE 802.1Q VLAN.

The ES8510-XTE supports VLAN tunneling (QinQ), which expands the number of VLANs by adding a tag to the 802.1Q packets. The original VLAN is usually identified as Customer VLAN (C-VLAN) and the new VLAN is Service VLAN(S-VLAN). By adding the additional tag, QinQ increases the possible number of VLANs. After QinQ is enabled, the ES8510-XTE can reach up to 256x256 VLANs. With different standard tags, it also improves network security.

VLAN Configuration pages allow you to add and remove a VLAN, configure port Ingress/Egress parameters, and view the VLAN table. The following pages are included in this group:

- [VLAN Port Configuration](#) on Page 79
- [VLAN Configuration](#) on Page 81
- [GVRP Configuration](#) on Page 84
- [VLAN Table](#) on Page 85

Optionally, you can use the CLI for configuration, see [VLAN \(CLI\)](#) on Page 150.

VLAN Port Configuration

The *VLAN Port Configuration* page allows you to configure VLAN port parameters on a specific port. These parameters include the port VLAN ID (PVID), Tunnel Mode, Accept Frame Type and Ingress Filtering

VLAN Port Configuration

Port	PVID	Tunnel Mode	Accept Frame Type	Ingress Filtering
1	1	None	Admit All	Disable
2	1	None	Admit All	Disable
3	1	None	Admit All	Disable
4	1	None	Admit All	Disable
5	1	None	Admit All	Disable
6	1	None	Admit All	Disable
7	1	None	Admit All	Disable
8	1	None	Admit All	Disable
9	1	None	Admit All	Disable
10	1	None	Admit All	Disable

Apply

VLAN Port Configuration Page	
PVID	Enter the port VLAN ID (PVID). The PVID allows the switches to identify which port belongs to which VLAN. To keep things simple, it is recommended that PVID is equivalent to VLAN IDs. The values of PVIDs are from 0 to 4,095 (0 and 4,095 are reserved), 1 is the default value; 2 to 4,094 are valid and available in this column. Enter the PVID you want to configure.
Tunnel Mode	<p>None - IEEE 802.1Q tunnel mode is disabled.</p> <p>802.1Q Tunnel: QinQ is applied to the ports which connect to the C-VLAN. The port receives a tagged frame from the C-VLAN. You need to add a new tag (Port VID) as an S-VLAN VID. When the packets are forwarded to the C-VLAN, the S-VLAN tag is removed. After 802.1Q Tunnel mode is assigned to a port, the egress setting of the port should be <i>Untag</i>, it indicates that the egress packet is always untagged. This is configured in the Static VLAN Configuration table (Page 81).</p> <p>802.1Q Tunnel Uplink: QinQ is applied to the ports which connect to the S-VLAN. The port receives a tagged frame from the S-VLAN. When the packets are forwarded to the S-VLAN, the S-VLAN tag is kept. After 802.1Q Tunnel Uplink mode is assigned to a port, the egress setting of the port should be <i>Tag</i>, it indicates that the egress packet is always tagged. This is configured in the Static VLAN Configuration table (Page 81). For example, if the VID of S-VLAN/Tunnel Uplink is 10, the VID of C-VLAN/Tunnel is 5. The 802.1Q Tunnel port receives Tag 5 from C-VLAN and adds Tag 10 to the packet. When the packets are forwarded to S-VLAN, Tag 10 is kept.</p>

VLAN Port Configuration Page (Continued)	
Accept Frame Type	<p>This defines the accepted frame type of the port. There are two modes you can select:</p> <ul style="list-style-type: none"> • Admit All mode means that the port can accept both tagged and untagged packets. When you select Admit All, untagged frames or Priority-Tagged only frames received on this port are accepted and assigned to the PVID for this frame. This control does not affect VLAN independent BPDU frames, such as Super Ring, STP, GVRP and LACP. It does affect VLAN dependent BPDU frames, such as GMRP. • Tag Only mode means that the port can only accept tagged packets. When you select Tag Only the ES8510-XTE discards untagged frames or Priority-Tagged only frames received on this port.
Ingress Filtering	<p>Ingress filtering instructs the VLAN engine to filter out undesired traffic on a port.</p> <ul style="list-style-type: none"> • When you Enable Ingress Filtering, the port checks whether the incoming frames belong to the VLAN they claimed or not. The port then determines if the frames can be processed or not. For example, if a tagged frame from <i>TEST VLAN</i> is received, and Ingress Filtering is enabled, the ES8510-XTE determines if the port is on the <i>TEST VLAN</i>'s Egress list. If it is, the frame can be processed. If it is not, the frame is dropped. • When you select Disable, the port accepts all incoming frames regardless of its VLAN classification. This control does not affect VLAN independent BPDU frames, such as Super Ring, STP, GVRP and LACP. It does affect VLAN dependent BPDU frames, such as GMRP.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

Static VLAN	<p>You can assign a VLAN ID and VLAN Name for the new static VLAN.</p> <ul style="list-style-type: none"> • VLAN ID: This is used by the switch to identify different VLANs. A valid VLAN ID is between 1 and 4,094, 1 is the default VLAN. • VLAN Name: This is a reference for the network administrator to identify different VLANs. The VLAN name may up to 12 characters in length. If you do not provide a VLAN name, the system automatically assigns a VLAN name • . The rule is VLAN (VLAN ID). <p>Click Add to create a new VLAN. The new VLAN displays in the Static VLAN Configuration table. After creating the VLAN, the status of the VLAN remains Unused, until you add ports to the VLAN.</p> <p><i>Note: Before changing the management VLAN ID by web or Telnet, remember that the port attached by the administrator should be the member port of the management VLAN; otherwise the administrator cannot access the switch through the network. The ES8510-XTE supports a maximum of 256 VLANs.</i></p>
Static VLAN Configuration	<ul style="list-style-type: none"> • VLAN ID: The VLAN identifier for this VLAN. • Name: The name of the VLAN. • 1 - 10: The corresponding port number on the VLAN. <ul style="list-style-type: none"> • -- Not available • U Untag, indicates that egress/outgoing frames are not VLAN tagged. • T Tag, indicates that egress/outgoing frames are • LAN tagged. • Click Apply to apply the settings. <p><i>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</i></p> <ul style="list-style-type: none"> • Click Remove to remove the selected static VLAN. • Click Reload to reload static VLAN configuration.

The following figure shows a static VLAN configuration table. The new VLAN 3 was created and the VLAN name is test. Egress rules of the ports are not configured.

Static VLAN Configuration

VLAN ID	Name	1	2	3	4	5	6	7	8	9	10
1	VLAN1	U	U	U	U	U	U	U	U	U	U
2	VLAN2	--	--	--	--	--	--	--	--	--	--
3	test	--	--	--	--	--	--	--	--	--	--

Apply Remove Reload

This figure displays how to configure the Egress rule of the ports.

Static VLAN Configuration

VLAN ID	Name	1	2	3	4	5	6	7	8
1	VLAN1	U	U	U	U	U	U	U	U

Apply Remove Reload

Static VLAN Configuration

VLAN ID	Name	1	2	3	4	5	6	7	8	9	10
1	VLAN1	U	U	U	U	U	U	U	U	U	U
2	VLAN2	--	--	--	--	--	--	--	--	--	--
3	test	--	--	--	--	U	T	T	T	T	T

Apply Remove Reload

Use the following steps to configure Egress rules:

1. Select the VLAN ID. The entry of the selected VLAN turns to light blue.
2. Assign Egress rule of the ports to **U** or **T**.
3. Press **Apply** to apply the setting.

If you want to remove one VLAN, select the VLAN entry and then click the **Remove** button.

GVRP Configuration

GARP VLAN Registration Protocol (GVRP) allows you to set-up VLANs automatically rather than manual configuration on every port on every switch in the network. GVRP conforms to the IEEE 802.1Q specification. This defines a method of tagging frames with VLAN configuration data that allows network devices to dynamically exchange VLAN configuration information with other devices.

GARP (Generic Attribute Registration Protocol), a protocol that defines procedures by which end stations and switches in a local area network (LAN) can register and de-register attributes, such as identifiers or addresses, with each other. Every end station and switch thus has a current record of all the other end stations and switches that can be reached. GVRP, like GARP, eliminates unnecessary network traffic by preventing attempts to transmit information to unregistered users. In addition, it is necessary to manually configure only one switch and all the other switches are configured accordingly.

GVRP Configuration

GVRP Protocol

Port	State	Join Timer	Leave Timer	Leave All Timer
1	Disable	20	60	1000
2	Disable	20	60	1000
3	Disable	20	60	1000

5	Disable	20	60	1000
6	Disable	20	60	1000
7	Disable	20	60	1000
8	Disable	20	60	1000
9	Disable	20	60	1000
10	Disable	20	60	1000

Note: Timer unit is centiseconds.

GVRP Configuration Page	
GVRP Protocol	Allows you to Enable/Disable GVRP globally.
State	After enabling GVRP globally, you can still Enable/Disable GVRP by port.
Join Timer	Controls the interval of sending the GVRP Join BPDU (Bridge Protocol Data Unit). An instance of this timer is required on a per-port, per-GARP participant basis.
Leave Timer	Controls the time to release the GVRP reservation after having received the GVRP Leave BPDU. An instance of the timer is required for each state machine that is in the LV state.
Leave All Timer	Controls the period to initiate the garbage collection of registered VLAN. The timer is required on a per-port, per-GARP participant basis.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

VLAN Table

This table displays the current settings of your VLAN table, including VLAN ID, Name, Status, and Egress rule of the ports.

VLAN Table

VLAN Table

VLAN ID	Name	Status	1	2	3	4	5	6	7	8	9	10
1	VLAN1	Static	U	U	U	U	U	U	U	U	U	U

Reload

VLAN Table Page	
VLAN ID	The ID of the VLAN.
Name	The name of the VLAN.
Status	<p>Static means that this is a manually configured static VLAN.</p> <p>Unused means this VLAN is created by web user interface/CLI and has no member ports and the VLAN is not workable yet.</p> <p>Dynamic means this VLAN was learnt by GVRP.</p> <ul style="list-style-type: none"> • -- No VLAN setting. • T A Trunk Link is a LAN segment used for multiplexing VLANs between VLAN bridges. All the devices that connect to a Trunk Link must be IEEE 802.1Q VLAN-aware, which sends and receives frames with IEEE 802.1Q tags. • U An Access Link is a LAN segment used to multiplex one or more IEEE 802.1Q VLAN-unaware devices into a Port of a VLAN Bridge. Devices that are connected to an Access Link sends and receives frames without IEEE 802.1Q tagging, which is the identification of the VLAN it belongs to.

After creating the VLAN, the status of this VLAN remains in **Unused** status until you add ports to the VLAN.

Private VLAN

A private VLAN helps to resolve the primary VLAN ID shortage, client ports' isolation and network security issues. The private VLAN features provides primary and secondary VLANs within a single switch.

Primary VLAN: The uplink port is usually a member of the primary VLAN. A primary VLAN contains promiscuous ports that can communicate with Secondary VLANs.

Secondary VLAN: The client ports are usually defined within secondary VLAN. The secondary VLAN includes Isolated and Community VLANs. The client ports can be isolated VLANs or can be grouped in the same Community VLAN. The ports within the same community VLAN can communicate with each other, however, the isolated VLAN ports cannot.

This figure shows a typical private VLAN network. A SCADA/Public Server or NMS workstation is usually located in a primary VLAN. Client PCs and rings are usually located within the secondary VLAN.

The following web pages are in this group:

- [PVLAN Configuration](#) on Page 86
- [PVLAN Port Configuration](#) on Page 87
- [PVLAN Information](#) on Page 88

Optionally, you can use the CLI for configuration, see [Private VLAN \(CLI\)](#) on Page 153.

PVLAN Configuration

PVLAN Configuration allows you to assign a private VLAN type. Choose the private VLAN types for each VLAN you want configure.

Note: You must have previously configured a VLAN in the VLAN Configuration screen. Refer to [VLAN Configuration](#) on Page 81 for information.

Private VLAN Configuration Page	
VLAN ID	<ul style="list-style-type: none"> • <i>Primary VLAN</i> - The uplink port is usually the primary VLAN. Ports within a primary VLAN can communicate with ports in a secondary VLAN • <i>Secondary VLAN</i> - The client ports are usually defined within secondary VLAN. The secondary VLAN includes Isolated VLAN and Community VLANs. The client ports can be isolated VLANs or can be grouped in the same Community VLAN. The ports within the same community VLAN can communicate with each other. However, the isolated VLAN ports cannot.

5	2

Private VLAN Port Configuration Page	
PVLAN Port Type	<p>The following options are available:</p> <p>Normal: Normal ports remain in their original VLAN configuration.</p> <p>Host: Host ports can be mapped to the secondary VLAN.</p> <p>Promiscuous: Promiscuous ports can be associated to the primary VLAN.</p>
VLAN ID	After assigning the port type, this displays the available VLAN ID for which the port can associate.
Private VLAN Association	
Secondary VLAN	After the isolated and community VLANs are configured in the <i>Private VLAN Configuration</i> page, the VLANs belonging to the second VLAN are displayed.
Primary VLAN	<p>After the Primary VLAN Type is assigned in <i>Private VLAN Configuration</i> page, the secondary VLAN can associate to the primary VLAN ID.</p> <p>Note: Before configuring PVLAN port type, the private VLAN Association should be done first.</p>

For example:

1. **VLAN Create:** VLANs 2-5 are created in the *VLAN Configuration* page.
2. **Private VLAN Type:** VLANs 2-5 has their own Private VLAN Type configured in the *Private VLAN Configuration* page.
VLAN 2 belongs to the Primary VLAN.
VLANs 3-5 belong to the secondary VLAN (Isolated or Community).
3. **Private VLAN Association:** Associate VLANs 3-5 to VLAN 2 in the Private VLAN Association first.
4. **Private VLAN Port Configuration**
VLAN 2 – Primary -> The member port of VLAN 2 is a promiscuous port.
VLAN 3 – Isolated -> The Host port can be mapped to VLAN 3.
VLAN 4 – Community -> The Host port can be mapped to VLAN 3.
VLAN 5 – Community -> The Host port can be mapped to VLAN 3.
5. **Result:**
VLAN 2 -> VLANs 3, 4, 5; member ports can communicate with the ports in secondary VLAN.
VLAN 3 -> VLAN 2, member ports are isolated, but it can communicate with the member ports of VLAN 2.
VLAN 4 -> VLAN 2, member ports within the community can communicate with each other and communicate with member ports of VLAN 2.
VLAN 5 -> VLAN 2, member ports within the community can communicate with each other and communicate with member ports of VLAN 2.

Traffic Prioritization

Quality of Service (QoS) provides a traffic prioritization mechanism which allows you to deliver better service to certain flows. QoS can also help to alleviate congestion problems and ensure high-priority traffic is delivered first. This section allows you to configure Traffic Prioritization settings for each port with regard to setting priorities.

The ES8510-XTE QoS supports four physical queues, weighted fair queuing (WRR) and Strict Priority scheme, that follows the IEEE 802.1p CoS tag and IPv4 TOS/DiffServ information to prioritize the traffic of your industrial network.

The following web pages are included in this group:

- [QoS Setting](#)
- [CoS-Queue Mapping](#) on Page 90
- [DSCP-Queue Mapping](#) on Page 91

Optionally, you can use the CLI for configuration, see [Traffic Prioritization \(CLI\)](#) on Page 157.

QoS Setting

Use this subsection to set up QoS settings for the ES8510-XTE.

QoS Setting

Queue Scheduling

- Use an 8,4,2,1 weighted fair queuing scheme
 Use a strict priority scheme

Port Setting

Port	CoS	Trust Mode
1	0	COS Only
2	0	COS Only
3	0	COS Only
4	0	COS Only
5	0	COS Only
6	0	COS Only
7	0	COS Only
8	0	COS Only
9	0	COS Only
10	0	COS Only

Apply

QoS Setting Page	
Queue Scheduling	
Use an 8,4,2,1 weighted fair queuing scheme	This is also known as WRR (Weight Round Robin). The ES8510-XTE follows the 8:4:2:1 rate to process the packets in a queue from the highest priority to the lowest. For example, the system processes 8 packets with the highest priority in the queue, 4 with middle priority, 2 with low priority, and 1 with the lowest priority at the same time.

QoS Setting Page (Continued)	
Use a strict priority scheme	Packets with higher priority in the queue are always processed first, except that there is no packet with higher priority.
Port Setting	
CoS	The CoS column indicates that the default port priority value for untagged or priority-tagged frames. When the ES8510-XTE receives the frames, the ES8510-XTE attaches the value to the CoS field of the incoming VLAN-tagged packets. You can enable 0,1,2,3,4,5,6 or 7 to the port.
Trust Mode	<p>Trust Mode indicates the Queue Mapping types that you can select.</p> <ul style="list-style-type: none"> • COS Only (default): The port priority follows the CoS-Queue Mapping you have assigned. The ES8510-XTE provides the default CoS-Queue table for which you can refer to for the next command. • DSCP Only: Port priority only follows the DSCP-Queue Mapping you have assigned. • COS first: Port priority follows the CoS-Queue Mapping first, and then the DSCP-Queue Mapping rule. • DSCP first: Port priority follows the DSCP-Queue Mapping first, and then the CoS-Queue Mapping rule.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

CoS-Queue Mapping

Use this page to change the CoS values into the Physical Queue mapping table. Since the switch fabric of ES8510-XTE supports four queues, Lowest, Low, Middle, and High users should therefore assign how to map the CoS value to the level of the physical queue.

You can assign the mapping table or follow the suggestion of the IEEE 802.1p standard. The ES8510-XTE uses IEEE 802.1p suggestion as default values. CoS Values 1 and 2 are mapped to physical Queue 0, the lowest queue. CoS Values 0 and 3 are mapped to physical Queue 1, the low/normal physical queue. CoS Values 4 and 5 are mapped to physical Queue 2, the middle physical queue. CoS Values 6 and 7 are mapped to physical Queue 3, the high physical queue.

CoS-Queue Mapping

CoS	0	1	2	3	4	5	6	7
Queue	1	0	0	1	2	2	3	3

Note: Queue 3 is the highest priority queue in using Strict Priority scheme.

Apply

Class of service (CoS) is a 3 bit field within a layer two Ethernet frame header defined by IEEE 802.1p when using IEEE 802.1Q tagging. The field specifies a priority value of between 0 and 7 inclusive that can be used by Quality of Service (QoS) disciplines to differentiate traffic.

While CoS operates only on Ethernet at the data link layer, other QoS mechanisms (such as DiffServ) operate at the network layer and higher. Others operate on other physical layers. Although IEEE 802.1Q tagging must be enabled to communicate priority information from switch to switch, some switches use CoS to internally classify traffic for QoS purposes.

Differentiated Services (DiffServ) is a model where traffic is treated by intermediate systems with relative priorities based on the type of services (ToS) field. Defined in RFC2474 and RFC2475, the DiffServ standard supersedes the original specification for defining packet priority described in RFC791. DiffServ increases the number of definable priority levels by reallocating bits of an IP packet for priority marking. The DiffServ architecture defines the DiffServ field, which supersedes the ToS field in IPv4 to make per-hop behavior

(PHB) decisions about packet classification and traffic conditioning functions, such as; metering, marking, shaping, and policing.

After configuration, press **Apply** to enable the settings.

Note: You must **Save** the settings ([Page 118](#)), if you want to maintain these settings if the ES8510-XTE is powered off.

DSCP-Queue Mapping

Use this page to change DSCP values to Physical Queue mapping table. Since the switch fabric of the ES8510-XTE only supports four queues. Lowest, Low, Middle and High users should therefore assign how to map DSCP values to the level of the physical queue. You should therefore assign how to map DSCP value to the level of the queue. You can change the mapping table to follow the upper layer 3 switch or routers' DSCP setting.

Traffic Prioritization

DSCP-Queue Mapping

DSCP	0	1	2	3	4	5	6	7
Queue	1	1	1	1	1	1	1	1
DSCP	8	9	10	11	12	13	14	15
Queue	0	0	0	0	0	0	0	0
DSCP	16	17	18	19	20	21	22	23
Queue	0	0	0	0	0	0	0	0
DSCP	24	25	26	27	28	29	30	31
Queue	1	1	1	1	1	1	1	1
DSCP	32	33	34	35	36	37	38	39
Queue	2	2	2	2	2	2	2	2
DSCP	40	41	42	43	44	45	46	47
Queue	2	2	2	2	2	2	2	2
DSCP	48	49	50	51	52	53	54	55
Queue	3	3	3	3	3	3	3	3
DSCP	56	57	58	59	60	61	62	63
Queue	3	3	3	3	3	3	3	3

Note: Queue 3 is the highest priority queue.

Apply

After configuration, press **Apply** to enable the settings.

Note: You must **Save** the settings ([Page 118](#)), if you want to maintain these settings if the ES8510-XTE is powered off.

Multicast Filtering

For multicast filtering, the ES8510-XTE uses IGMP (Internet Group Management Protocol) Snooping technology. IGMP is an internet protocol that provides a way for internet device to report its multicast group membership to adjacent routers. Multicasting allows one computer on the internet to send data to a multitude of other computers that have identified themselves as being interested in receiving the originating computer's data.

Multicasting is useful for such applications as updating the address books of mobile computer users in the field, sending out newsletters to a distribution list, and broadcasting streaming media to an audience that has tuned into the event by setting up multicast group membership.

In effect, IGMP Snooping manages multicast traffic by making use of switches, routers, and hosts that support IGMP. Enabling IGMP Snooping allows the ports to detect IGMP queries, report packets, and manage multicast traffic through the switch. IGMP has three fundamental types of messages, as shown in the following table.

Messages	
Query	A message sent from the querier (an IGMP router or a switch) that asks for a response from each host that belongs to the multicast group.
Report	A message sent by a host to the querier to indicate that the host wants to be or is a member of a given group indicated in the report message.
Leave Group	A message sent by a host to the querier to indicate that the host has quit as a member of a specific multicast group.

You can enable **IGMP Snooping** and **IGMP Query** functions. This section illustrates the information of the IGMP Snooping function, including different multicast groups' VID and member ports, and IP multicast addresses that range from 224.0.0.0 to 239.255.255.255.

The following web pages are included in this group:

- [IGMP Snooping](#) on Page 93
- [IGMP Query](#) on Page 94
- [Unknown Multicast](#) on Page 94

Optionally, you can use the CLI for configuration, see [Multicast Filtering \(CLI\)](#) on Page 160.

IGMP Snooping

Use this page to enable the IGMP Snooping feature, assign IGMP Snooping for specific VLANs, and view the IGMP Snooping table from a dynamic learnt or static that you provide.

IGMP Snooping Disable ▾

	VID	IGMP Snooping

IGMP Snooping	<p>You can select Enable or Disable. After enabling IGMP Snooping, you can then enable IGMP Snooping for specific VLAN.</p> <p>You can Enable IGMP Snooping for some VLANs so that some of the VLANs support IGMP Snooping and others do not.</p> <p>To assign IGMP Snooping to VLAN, click the check box of the VLAN ID or click the Select All check box for all VLANs and then click Enable. You can also Disable IGMP Snooping for certain VLANs using the same method.</p>
IGMP Snooping Table	<p>This table displays the multicast group IP address, VLAN ID it belongs to, and member ports of the multicast group. The ES8510-XTE supports 256 multicast groups. Click Reload to refresh the table.</p>

Note: You must **Save** the settings ([Page 118](#)), if you want to maintain these settings if the ES8510-XTE is powered off.

IGMP Query

Use this page to configure the IGMP Query feature. Since the ES8510-XTE can only be configured by member ports of the management VLAN, the IGMP Query can only be enabled on the management VLAN. If you want to run IGMP Snooping feature in several VLANs, first check to see whether each VLAN has its own IGMP Querier.

The IGMP querier periodically sends query packets to all end-stations on the LANs or VLANs that are connected to it. For networks with more than one IGMP querier, a switch with the lowest IP address becomes the IGMP querier.

IGMP Query on the Management VLAN

Version	Disable ▾
Query Interval(s)	<input type="text"/>
Query Maximum Response Time(s)	<input type="text"/>
<input type="button" value="Apply"/>	

IGMP Query Page	
Version	<p>Select Version 1, Version 2 or Disable.</p> <ul style="list-style-type: none"> Version 1 means IGMP V1 General Query Version 2 means IGMP V2 General Query. The query is forwarded to all multicast groups in the VLAN. Disable allows you to disable IGMP Query.
Query Interval(s)	The period of query (seconds) sent by querier. Enter a number between 1 and 65,535.
Query Maximum Response Time	This option is available when you select Version 2 . The span querier detect (seconds) to confirm there are no more directly connected group members on a LAN. Enter a number between 1 and 25.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

Unknown Multicast

This page allows you to decide how to forward the unknown multicast traffic. After enabling IGMP Snooping, the known multicast can be filtered by IGMP Snooping mechanism and forwarded to the member ports of known multicast groups. The other multicast streams that are not learned are-called unknown multicasts, the ES8510-XTE decides how to forward them based on the setting on this page.

Unknown Multicast

- Send to Query Ports
 Send to All Ports
 Discard

UnKnown Multicast Page	
Send to Query Ports	The unknown multicast is sent to the Query ports. The Query port means the port received the IGMP Query packets. It is usually the uplink port of the switch.
Send to All Ports	The unknown multicast is flooded on all ports even if they are not member ports of the groups.
Discard	The unknown multicast is discarded. Non-member ports do not receive the unknown multicast streams.
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

SNMP

Simple Network Management Protocol (SNMP) is a protocol to exchange management information between network devices. SNMP is a member of the TCP/IP protocol suite. The ES8510-XTE supports SNMP v1 and v2c and v3.

An SNMP managed network consists of two main components: agents and a manager. An agent is a management software module that resides in a managed switch. An agent translates the local management information from the managed device into a SNMP compatible format. The manager is the console through the network.

The following web pages are included in this group:

- [SNMP Configuration](#)
- [SNMP V3 Profile](#) on Page 96
- [SNMP Traps](#) on Page 97

Optionally, you can use the CLI for configuration, see [SNMP \(CLI\)](#) on Page 164.

SNMP Configuration

Use this page to configure the SNMP v1/v2c Community. The community string can be viewed as the password because SNMP v1/v2c does not request you to enter a password before you try to access the SNMP agent.

The community includes two privileges:

- **Read Only** privilege, you only have the ability to read the values of MIB tables. The default community string is **public**.
- **Read and Write** privilege, you have the ability to read and set the values of MIB tables. The default community string is **private**.

The ES8510-XTE allows you to assign four community strings. Type the community string, select the privilege, and then click **Apply**.

Note: When you first install the device in your network, we recommend that you change the community string. Most SNMP management applications use public and private as the default community name, this could be a network security leak.

SNMP

SNMP V1/V2c Community

Community String	Privilege
public	Read Only ▼
private	Read and Write ▼
	Read Only ▼
	Read Only ▼

- [802.1x Port Configuration](#) on Page 101
- [802.1x Port Status](#) on Page 103

Optionally, you can use the CLI for configuration, see [Security \(CLI\)](#) on Page 165.

Port Security

The *Port Security* page allows you to stop the MAC address learning for specific port. After stopping MAC learning, only the MAC address listed in Port Security List can access the switch and transmit/receive traffic.

You can restrict what devices can access the management features of the ES8510-XTE. MAC addresses added to the static MAC address table can be authorized to access specified ports on the switch.

When Port Security is enabled on any port, only authorized MAC addresses are able to access the management features of the ES8510-XTE on enabled ports. Ports with security disabled block all attempts to access the ES8510-XTE's management features. To globally disable port security you must disable the feature on each individual port.

Remove

The *Port Security* page allows you to enable *Port Security* and configure Port Security entry.

Port Security Page	
Port Security State	Select Enable to change the state of the Port Security State for this port.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.
Add Port Security Entry	Select the port, and enter the VID and MAC address. The format of the MAC address is xxxx.xxxx.xxxx, for example: 00c0.4e30.0101. The maximum volume of one port is 10. The system can accept a total of 100 Port Security MAC addresses.
Add	Adds a port security entry.
Port Security List	This table shows you enabled port security entries.
Remove	Removes the selected port security entry.

IP Security

Use the *Security IP* page to set up specific IP addresses to grant authorization for management access to this ES8510-XTE through a web browser or Telnet.

IP Security Page	
IP Security	Select Enable and Apply to enable the IP security function.
Add Security IP	You can assign specific IP addresses and then click Add . Only these IP addresses can access and manage ES8510-XTE through a web browser or Telnet. The maximum security IP is 10.
Security IP List	This table shows you added the security IP addresses.
Remove	Click Remove to delete a highlighted entry.

802.1x Configuration

IEEE 802.1x is the protocol that performs authentication to obtain access to IEEE 802 LANs. It is port-based network access control. With the function, the ES8510-XTE could control which connection is available or not.

802.1x Port-Based Network Access Control Configuration

System Auth Control

Authentication Method

RADIUS Server

RADIUS Server IP	192.168.10.100
Shared Key	radius-key
Server Port	1812
Accounting Port	1813

Local RADIUS User

Username	Password	VID
<input type="text"/>	<input type="text"/>	<input type="text"/>

Secondary RADIUS Server

RADIUS Server IP	<input type="text"/>
Shared Key	<input type="text"/>
Server Port	<input type="text"/>
Accounting Port	<input type="text"/>

Local RADIUS User List

Username	Password	VID

IEEE 802.1x Page	
System Auth Control	Enable or Disable the IEEE 802.1x authentication.
Authentication Method	RADIUS is an authentication server that provides a key for authentication. When you use this method, you must connect the switch to the server. If you select Local for the authentication method, the switch uses the local user database that can be created in this page for authentication.
RADIUS Server	
RADIUS Server IP	The IP address of the RADIUS server.
Shared Key	The password used to communicate between the ES8510-XTE and the RADIUS Server.
Server Port	The UDP port of the RADIUS server.
Accounting Port	The port for packets that contains the account login or logout information.
Secondary RADIUS Server	
RADIUS Server IP	You can set a Secondary RADIUS Server, if the primary RADIUS server goes down.
Shared Key	The password used to communicate between the ES8510-XTE and the secondary RADIUS Server.
Server Port	The UDP port of the secondary RADIUS server.
Accounting Port	The port for packets that contains the account login or logout information for the secondary server.

IEEE 802.1x Page (Continued)	
Local RADIUS User	<p>You can add an Account/Password for local authentication.</p> <ul style="list-style-type: none"> • User name: The user name of the local RADIUS user. • Password: The password of the local RADIUS user. • VID: The VLAN ID (VID) of the local RADIUS user. <p>Click the Add button to add a local RADIUS user.</p>
Local RADIUS User List	<p>Shows the account information, select Remove to remove a selected account.</p> <ul style="list-style-type: none"> • User name: The user name of the local RADIUS user. • Password: The password of the local RADIUS user. • VID: The VLAN ID (VID) of the local RADIUS user.

802.1x Port Configuration

After configuring the RADIUS Server or Local user list, you also need to configure the authentication mode, authentication behavior, applied VLAN for each port, and permitted communications.

802.1x Port-Based Network Access Control Port Configuration

802.1x Port Configuration

Port	Port Control	Reauthentication	Max Request	Guest VLAN	Host Mode	Admin Control Direction
1	Force Authorized	Disable	2	0	Single	Both
2	Force Authorized	Disable	2	0	Single	Both
3	Force Authorized	Disable	2	0	Single	Both
4	Force Authorized	Disable	2	0	Single	Both
5	Force Authorized	Disable	2	0	Single	Both
6	Force Authorized	Disable	2	0	Single	Both

802.1x Timeout Configuration

Port	Re-Auth Period(s)	Quiet Period(s)	Tx Period(s)	Supplicant Timeout(s)	Server Timeout(s)
1	3600	60	30	30	30
2	3600	60	30	30	30
3	3600	60	30	30	30
4	3600	60	30	30	30
5	3600	60	30	30	30
6	3600	60	30	30	30

802.1x Port Configuration Page	
Port control	Force Authorized means that this port is authorized; the data is free to move in/out. Force unauthorized is just the opposite, the port is blocked. To control this port with a RADIUS server, select Auto for port control.
Reauthentication	If this field is enabled, the ES8510-XTE requests the client to re-authenticate. The default time interval is 3600 seconds.
Max Request	This is the maximum times that the ES8510-XTE allows a client request.
Guest VLAN	The permitted range for this field is 0 to 4094. If this field is set to 0, that means the port is blocked after an authentication failure. Otherwise, the port is set to Guest VLAN.
Host Mode	If there is more than one device connected to this port, set the Host Mode to Single , which means only the first PC to authenticate successfully can access this port. If this port is set to Multi , all of the devices can access this port once any one of them passes the authentication.
Admin Control Direction	Use this to determine which devices can only send data or both send and receive data.
Apply	Click Apply to apply the settings.
Initialize Selected	Click to set the authorization state of the selected port to initialize status.
Reauthenticate Selected	Click to send an EAP Request to the requestor to request reauthentication.
Default Selected	Click to reset the configurable IEEE 802.1x parameters of selected port to the default values.
802.1x Timeout Configuration	
Re-Auth Period(s)	Controls the re-authentication time interval (seconds), you can enter a range of 1 - 65535.
Quiet Period(s)	When authentication fails, the ES8510-XTE waits for a period and then tries to communicate with the RADIUS server again.
Tx Period(s)	The time interval of the authentication request.
Supplicant Timeout(s)	The timeout for the client authentication.
Sever Timeout(s)	The timeout for the server response for authentication.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

802.1x Port Status

Use the 802.1x Port Status page to observe the port status for Port Control Status, Authorize Status, Authorized Supplicant, and Oper Control Direction for each port.

802.1x Port-Based Network Access Control Port Status

Port	Port Control	Authorize Status	Authorized Supplicant	Oper Control Direction
1	Force Authorized	AUTHORIZED	NONE	Both
2	Force Authorized	AUTHORIZED	NONE	Both
3	Force Authorized	AUTHORIZED	NONE	Both
4	Force Authorized	AUTHORIZED	NONE	Both
5	Force Authorized	AUTHORIZED	NONE	Both
6	Force Authorized	AUTHORIZED	NONE	Both

Reload

Warning

The ES8510-XTE provides several types of warning features for you to remotely monitor the status of the attached devices or changes in your network. The features include Fault Relay, System Log, and SMTP Email Alert.

The following web pages are included in this group:

- [Fault Relay](#)
- [Event Selection](#) on Page 107
- [SysLog Configuration](#) on Page 108
- [SMTP Configuration](#) on Page 109

Optionally, you can use the CLI for configuration, see [Warnings \(CLI\)](#) on Page 167.

Fault Relay

The ES8510-XTE provides 2 digital outputs (also called relay outputs). The relay contacts are energized (open) for normal operation and closes under fault conditions. Fault conditions include **Digital Input (DI) State, Dry Output, Power Failure, Link Failure, Ping Failure, and Super Ring Failure**. You can configure these settings in this **Fault Relay Setting**. Each Relay can be assigned one fault condition.

Relay 1: Click the check box for **Relay 1** then select the **Event Type** and its parameters.

Relay 2: Click the check box for **Relay 2** then select the **Event Type** and its parameters.

Event Type: Includes **DI State, Dry Output, Power Failure, Link Failure, Ping Failure, and Super Ring Failure**. Each event type has its own parameters of which you need to configure. Currently each relay can have one event type.

Event Type: DI State

DI Number: Select **DI 1** or **DI 2** to determine which DI you want to monitor.

DI State: Select whether you want to an event thrown when the voltage on the DI is **High** or **Low**.

How to configure: Select the DI number and DI State you want to monitor. For example when DI 1 and High are selected it means when DI 1's voltage high the system shorts the relay output and light the DO LED.

Fault Relay Setting

The screenshot shows the 'Fault Relay Setting' interface. It contains two relay configuration blocks. The first block, 'Relay 1', has a checked checkbox and an 'Event Type' dropdown menu set to 'DI state'. The second block, 'Relay 2', has an unchecked checkbox and an 'Event Type' dropdown menu also set to 'DI state'. Below these blocks is a grey 'Apply' button.

This is a detailed view of the 'Relay 1' configuration. It shows a checked checkbox for 'Relay 1'. Below it are three dropdown menus: 'Event Type' is set to 'DI state', 'DI Number' is set to 'DI 1', and 'DI State' is set to 'High'.

Event Type: Dry Output

On Period (Sec): Type the period time to turn on relay output. The valid range is from 0 to 4294967295 seconds.

Off Period (Sec): Type the period time to turn off relay output. The valid range is from 0 to 4,294,967,295 seconds.

How to configure: If you enter a turn on period or a turn off period when either specified time is reached the system turns on or off the relay output. If you connect the Digital Output (DO) to a DI of the other terminal unit the setting allows you to change the DI state. If you connect the DO to the power set of other units you to turn on or off the attached unit.

<input checked="" type="checkbox"/> Relay 1	
Event Type	Dry Output
On Period(Sec)	5
Off Period(Sec)	10

Relay turns on for 5 seconds and then off for 10

How to turn On/Off the other device: Type 1 into the **On Period(Sec)** field and 0 into the **Off Period(Sec)** field and apply the settings. The relay is then configured to form as a close circuit. To turn off the relay just type 0 into the **On Period(Sec)** field and 1 into **Off Period(Sec)** field and apply the settings. The relay is configured to form as an open circuit. This function is also available in the CLI and SNMP interfaces. See the following setting:

<input checked="" type="checkbox"/> Relay 1	
Event Type	Dry Output
On Period(Sec)	1
Off Period(Sec)	0

Turn on the relay

<input checked="" type="checkbox"/> Relay 1	
Event Type	Dry Output
On Period(Sec)	0
Off Period(Sec)	1

Turn off the relay

Event Type: Power Failure

Power ID: Select **Power 1** or **Power 2**. When the power is shut down or broken for the selected input the system shorts the relay out and light the DO LED.

<input checked="" type="checkbox"/> Relay 1	
Event Type	Power Failure
Power ID	Power 1

Event Type: Link Failure

Link: Select the port ID you want to monitor.

How to configure: Select the check box of the Ethernet ports you want to monitor. You can select one or more ports. When the selected links are down or broken the system shorts the relay output and light the DO LED.

<input checked="" type="checkbox"/> Relay 1					
Event Type	Link Failure				
Link	1	2	3	4	5
	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
	6	7	8	9	10
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Event Type: Ping Failure

IP Address: Enter the IP address of the target device you want to ping.

Reset Time (Sec): The amount of time to wait before shorting the relay output.

Hold Time (Sec): Waiting time to ping the target device for the duration of remote device boot.

How to configure: After selecting **Ping Failure** event type the system turns the relay output to short state and continuously ping the target device. When the ping failure occurs the switch turns the relay output to open state for a period of **Reset Time**.

After the **Reset Time(Sec)** timeout the system turns the relay output to a closed state. After the **Hold Time(Sec)** timeout the switch system starts to ping the target device.

For example if **Reset Time** is set to 5 seconds and **Hold Time** is set to 50 seconds off the ping failure occurs the switch system turns the relay output to an open state to emulate power switch off for 5 second periods. After **Reset Time** timeout the switch starts to ping the target device every 50 seconds. The period of time is for target device system booting. During this period the switch system does not ping the target device until the **Hold Time** timeout.

<input checked="" type="checkbox"/> Relay 1	
Event Type	Ping Failure
IP Address	192.168.11.2
Reset Time(Sec)	5
Hold Time(Sec)	50

Event Type: Super Ring Failure

Select **Super Ring Failure** and when the Redundant Ring topology is changed the system shorts the relay out and light the DO LED.

Once you finish configuring the settings click the **Apply** button to apply your configuration.

<input checked="" type="checkbox"/> Relay 1	
Event Type	Super Ring Failure

Event Selection

Event Types can be divided into two basic groups: System Events and Port Events. System Events are related to the overall function of the switch, whereas Port Events are related to the activity of specific ports.

Warning - Event Selection

System Event Selection

- Device Cold Start
- Device Warm Start
- Power1 Failure

Apply

System Event	Warning is sent when....
Device Cold Start	Power is cut off and then reconnected.
Device Warm Start	Reboot the device by CLI or web user interface.
Power 1 Failure	Select this if you want the ES8510-XTE to send notification of a PW1 failure.
Power 2 Failure	Select this if you want the ES8510-XTE to send notification of a PW2 failure.
Authentication failure	An incorrect password or SNMP Community String is entered.
Time Synchronize Failure	Accessing the NTP Server is failing.
Fault Relay	Fault Relay has occurred.
DI1 Change	The Digital Input#1 status has changed.
DI2 Change	The Digital Input#2 status has changed.
Ring Event	A ring event has occurred.
Loop Protection	A loop protection event has occurred.

System Event	Warning Event is sent when....
SFP DDM Failure	The information read from the DDM SFP transceiver is over temperature or out the range of TX/RX power.
Port Event	Warning is sent when.....
Link-Up	The port is connected to another device.
Link-Down	The port is disconnected. For example, the cable is pulled out or the opposing devices is down.
Both	The link status changed.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

SysLog Configuration

The System Log provides the system administrator ES8510-XTE events history. There are two System Log modes provided by the ES8510-XTE, **Local** mode and **Remote** mode.

Warning - SysLog configuration

Syslog Mode	Disable
Remote IP Address	

Note: When enabled Local and Both mode, you can monitor the system logs in the [\[Monitor and Diag\]/\[Event Log\]](#) page.

Apply

Warning - SysLog Configuration Page	
Syslog Mode	There are two system logs available: <ul style="list-style-type: none"> Local Mode: The ES8510-XTE prints the events that have been selected in the Event Selection page to the System Log table of the ES8510-XTE. You can monitor the system logs in the <i>Monitor and Diag / Event Log</i> page. Remote Mode: Assign the IP address of the System Log server. The ES8510-XTE sends the events that occurred in the selected in <i>Event Selection</i> page to System Log server that you assign. Both: This enables both Local and Remote modes.
Remote IP Address	The IP address of the System log server.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

When enabling **Local** or **Both** modes, you can monitor the system logs in the *Monitor and Diag / Event Log* page.

SMTP Configuration

The ES8510-XTE supports an Email Alert feature. The ES8510-XTE sends the events that have occurred to a remote email server. The email warning conforms to the SMTP standard.

The E-mail Alert page allows you to assign the SMTP Server IP, Sender E-mail, and Receiver E-mail. If the SMTP server requests authentication, you can set up the user name and password.

Warning - SMTP Configuration

Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Monitor and Diag

The ES8510-XTE provides several web user interface pages for you to monitor the status of the switch or diagnostics when encountering problems related to the ES8510-XTE. The features include MAC Address Table, Port Statistics, Port Mirror, Event Log, and Ping.

The following web pages are included in this group:

- [MAC Address Table](#)
- [Port Statistics](#) on Page 112
- [Port Mirroring](#) on Page 113
- [Event Log](#) on Page 114
- [Topology Discovery \(LLDP\)](#) on Page 115
- [Ping Utility](#) on Page 116

Optionally, you can use the CLI for configuration, see [Monitor and Diag \(CLI\)](#) on Page 170.

MAC Address Table

The ES8510-XTE provides 8K entries in the MAC Address Table. You can change the Aging time, add Static Unicast MAC Address, monitor the MAC address or sort them by different packet types and ports.

MAC Address Table

Aging Time (Sec)

Static Unicast MAC Address

MAC Address	VID	Port

MAC Address Table Page	
Aging Time (Sec)	<p>Each switch fabric has a size limit to write the learnt MAC address. To save more entries for a new MAC address, the switch fabric ages out a non-used MAC address entry per the Aging Time timeout.</p> <p>This value determines the interval that an automatically learnt MAC address entry remains valid in the forwarding database, since its last access as a source address, before being purged. The value should be increments of 15 in seconds.</p> <p>The minimum age time is 15 seconds. The maximum age time is 3825 seconds or almost 64 minutes. The default Aging Time is 300 seconds.</p> <p>If the value is set to 0, the aging function is disabled and all learned addresses remain in the database forever.</p>
Static Unicast MAC Address	<p>Some applications may require that you type in the static Unicast MAC address to its MAC address table. Type the MAC address (format: xxxx.xxxx.xxxx), select its VID, and Port ID, and then click Add to add it to MAC Address Table.</p>
MAC Address Table	<p>This displays all the MAC addresses learnt by the switch fabric.</p> <p>The packet types include Management Unicast, Static Unicast, Dynamic Unicast, Static Multicast, and Dynamic Multicast.</p> <p>The table allows you to sort the address by the packet types and port.</p>
Address Types	<ul style="list-style-type: none"> • Management Unicast means the MAC address of the switch. It belongs only to the CPU port. • Static Unicast MAC addresses can be added and deleted. • Dynamic Unicast MAC is a MAC address learnt by the switch Fabric. • Static Multicast can be added by the CLI and can be deleted using the web user interface and CLI. • Dynamic Multicast appears after you enabled IGMP and the switch learnt IGMP report. • Management Multicast - multicast address that is configured for management purposes, such as GVRP and so on. Management entries are read-only. <p>Dynamic and static entries can be removed.</p>
Remove	<p>Click to remove the static Unicast/Multicast MAC address.</p>
Reload	<p>Click to reload to refresh the table. The new learnt Unicast/Multicast MAC address are updated in the MAC Address Table.</p>
Apply	<p>Click Apply to apply the settings.</p> <p>Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.</p>

Port Statistics

Use this page to view operation statistics for each port. The statistics that can be viewed include Link Type, Link State, Rx Good, Rx Bad, Rx Abort, Tx Good, Tx Bad and Collisions.

Note: *If you see an increase of Bad, Abort or Collision counts, that may mean the network cable is not properly connected or the network performance of the port is poor. Check your network cable, the network interface card of the connected device, the network application, or reallocate the network traffic.*

The following information provides a view of the current port statistic information.

Port Statistics

Port	Type	Link	State	Rx Good	Rx Bad	Rx Abort	Tx Good	Tx Bad	Collision
1	100BASE	Down	Enable	27178	0	0	517	0	0
2	100BASE	Up	Enable	1165469	0	0	14133	0	0
3	100BASE	Down	Enable	0	0	0	0	0	0
4	100BASE	Down	Enable	0	0	0	0	0	0
5	100BASE	Down	Enable	0	0	0	0	0	0
6	100BASE	Down	Enable	0	0	0	0	0	0
7	100BASE	Down	Enable	0	0	0	0	0	0
8	100BASE	Down	Enable	0	0	0	0	0	0
9	100BASE	Down	Enable	0	0	0	0	0	0
10	100BASE	Down	Enable	0	0	0	0	0	0

Port Statistics Page	
Type	Indicates the port type.
Link	Indicates the link status; Up or Down .
State	Indicates the link state; Enable or Disable .
RX Good	The count of good frames received, which is the total number of received unicast, broadcast, multicast, and pause frames.
RX Bad	The count of bad frames received, which is the total number of undersize, fragment, oversize, jabber, receive errors (RxErr), and frame check sequence errors (FCSErr) frames.
RX Abort	The count of abort frames received, which is the total number of discarded and filtered frames.
TX Good	The count of good frames transmitted, which is the total number of transmitted unicast, broadcast, multicast and pause frames.
TX Bad	The count of FCSErr frames transmitted.
Collision	The count of collision frames, including single, multiple, excessive, and late collisions frames.
Clear Selected	Click to clear selected port counts.
Clear All	Click to clear all counts.
Reload	Click to reload all counts.

Port Mirroring

Port mirroring (also called *port spanning*) is a tool that allows you to mirror the traffic from one or more ports onto another port, without disrupting the flow of traffic on the original port. Any traffic that goes into or out of the **Source Ports** is duplicated at the **Destination Ports**. This traffic can then be analyzed at the Destination Port using a monitoring device or application. The network administrator typically utilizes this tool for diagnostics, debugging, or fending off attacks

Port Mirror Mode ▼

Port Selection

Port	Source Port		Destination Port	
	Rx	Tx	Rx	Tx

Port Mirroring Mode Page	
Port Mirror Mode	Select Enable or Disable to enable/disable port mirroring.
Source Port	This is also known as <i>Monitor Port</i> . These are the ports that you want to monitor. The traffic of all source/monitor ports is copied to destination/analysis ports. You can choose a single port, or any combination of ports, but you can only monitor them in Rx or TX only. Click the check box of the Port ID, RX, Tx or both to select the source ports.
Destination Port	This is also known as <i>Analysis Port</i> . You can analyze the traffic of all the monitored ports at this port without affecting the flow of traffic on the port or ports being monitored. Only one RX/TX of the destination port can be selected. The network administrator typically connects a LAN analyzer or Netxray device to this port.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Event Log

The System Log feature was introduced in [SysLog Configuration](#) on Page 108. When **System Log Local** mode is selected, the ES8510-XTE records events that occurred in the local log table. This page shows this log table. The entry includes the index, occurred data and time, and content of the events.

Click **Clear** to clear the entries. Click **Reload** to refresh the table.

System Event Logs

Index	Date	Time	Event Log
1	Jan 1	02:27:13	Event: Link 1 Down.
2	Jan 1	02:27:12	Event: Link 2 Down.
3	Jan 1	02:27:09	Event: Link 1 Up.
4	Jan 1	02:27:08	Event: Link 2 Up.
5	Jan 1	02:26:55	Event: Link 1 Down.
6	Jan 1	02:26:54	Event: Link 2 Down.
7	Jan 1	02:26:49	Event: Link 2 Up.

Topology Discovery (LLDP)

The ES8510-XTE supports topology discovery or LLDP (IEEE 802.1AB Link Layer Discovery Protocol) functionality that can help to discovery multi-vendor’s network devices on the same segment by a network monitoring system (NMS) that supports LLDP functionality.

Topology Discovery

LLDP ▼

LLDP Configuration

LLDP timer	<input type="text" value="30"/>
LLDP hold time	<input type="text" value="120"/>

LLDP Port State

Local Port	Neighbor ID	Neighbor IP	Neighbor VID
fa1	00:C0:4E:33:00:00	192.168.11.10	1

With LLDP functionality, NMS can easily maintain the topology map, display port ID, port description, system description, and VLAN ID. Once a link failure occurs, the topology changes the events that can be updated to the NMS as well. The LLDP Port State can display the neighbor ID and IP learnt from the connected devices.

Topology Discovery Page	
LLDP	Select Enable/Disable to enable/disable LLDP function.
LLDP Configuration	
LLDP timer	This is the interval time of each LLDP in seconds; valid values are from 5 to 254. The default is 30 seconds.
LLDP hold time	The Time to Live (TTL) timer. The LLDP state expires when the LLDP is not received by the hold time. The default is 120 seconds. and the range is from 10 to 255.
LLDP Port State	
Local Port	The current port number that linked with network device.
Neighbor ID	The MAC address of the peer device on the same network segment.
Neighbor IP	The IP address of the peer device on the same network segment.
Neighbor VID	The VLAN ID of the peer device on the same network segment.
Apply	Click Apply to apply the settings. Note: You must Save the settings (Page 118), if you want to maintain these settings if the ES8510-XTE is powered off.

Ping Utility

This page provides a **Ping Utility** to ping a remote device and check whether the device is alive or not.

Type the **Target IP** address of the target device and click **Start** to start the ping.

After few seconds, you can see the result in the **Result** field.

Ping

Target IP

Result

```
PING 192.168.11.250 (192.168.11.250): 56 data bytes
64 bytes from 192.168.11.250: icmp_seq=0 ttl=64 time=10.0 ms
64 bytes from 192.168.11.250: icmp_seq=1 ttl=64 time=0.0 ms
64 bytes from 192.168.11.250: icmp_seq=2 ttl=64 time=0.0 ms
64 bytes from 192.168.11.250: icmp_seq=3 ttl=64 time=0.0 ms
64 bytes from 192.168.11.250: icmp_seq=4 ttl=64 time=0.0 ms

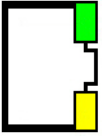

--- 192.168.11.250 ping statistics ---
5 packets transmitted, 5 packets received, 0% packet loss
round-trip min/avg/max = 0.0/2.0/10.0 ms
```

Device Front Panel

The **Device Front Panel** allows you to see the LED status of the ES8510-XTE.

Device Front Panel

LED Name	LED On/Link Up	LED Off/Link Down
Power 1 Power 2	Green	Black: No power
DO1 (Digital Output) DO2 (Digital Output)	Green: DO activated	Black: DO not activated
DI1 (Digital Input) DI2 (Digital Input)	Green: DI activated	Black: DI not activated
R.M. (ring master)	Green: Ring Master	Black: Ring function disabled
1 - 7  Link/ Speed	Green: Linked to another device	Black: Not connected
8 - 10 SFP RJ45	Green: Connected Gray: Plugged in but not linked up	Black: Not connected

Note: There is not a CLI command for this feature. If you can view the physical LEDs, you can use the [LED Descriptions](#) on Page 13, which provide detailed LED information.

Save to Flash

The **Save Configuration** pages allows you to save any configuration you made to the flash.

Powering off the switch without clicking **Save Configuration** causes loss of the new settings. Applying changes on web user interface pages do not save the changes to the flash.

After selecting **Save Configuration**, click **Save to Flash** to save your new configuration.

Save to Flash

Note: This command will permanently save the current configuration to flash.

Optionally, you can use the CLI, see [Saving to Flash \(CLI\)](#) on Page 173.

Logout

The ES8510-XTE provides two logout methods.

- The CLI connection logs out of configure terminal mode, if you do not input any command after 30 seconds.
- The **Logout** option in the web user interface allows you to manually logout the web connection. Click **Yes** to logout, **No** to remain the web user interface.

Optionally, you can use the CLI, see [Logging Out \(CLI\)](#) on Page 173.

Configuration Using the Command Line Interface (CLI)

Overview

The ES8510-XTE provides in-band and out-band configuration methods:

- Out-band management means that you configure the ES8510-XTE using the RS-232 console cable and the Command Line Interface (CLI) to access the ES8510-XTE without attaching an admin PC to the network. You can use out-band management if you lose the network connection to the ES8510-XTE.
- In-band management means that you connect remotely using the ES8510-XTE IP address through the network. You can remotely connect with the ES8510-XTE embedded Java applet web user interface or a Telnet console and the CLI.

If you are planning on using in-band management, you need to program the ES8510-XTE IP address to meet your network requirements. The easiest way to configure the IP address is using a Windows system and NetVision, which is discussed in [Programming Network Information](#) on Page 18.

If you want to use the web user interface for configuration, see [Configuration Using the Web User Interface](#) on Page 23.

Use the following procedures to access the ES8510-XTE using the CLI:

- [Using the Serial Console](#)
- [Using a Telnet Console](#)

This section contains information about the following groups of commands:

- [Basic Settings \(CLI\)](#) on Page 132
- [Port Configuration \(CLI\)](#) on Page 138
- [Network Redundancy \(CLI\)](#) on Page 141
- [VLAN \(CLI\)](#) on Page 150
- [Private VLAN \(CLI\)](#) on Page 153
- [Traffic Prioritization \(CLI\)](#) on Page 157
- [Multicast Filtering \(CLI\)](#) on Page 160
- [SNMP \(CLI\)](#) on Page 164
- [Security \(CLI\)](#) on Page 165
- [Warnings \(CLI\)](#) on Page 167
- [Monitor and Diag \(CLI\)](#) on Page 170
- [Saving to Flash \(CLI\)](#) on Page 173
- [Logging Out \(CLI\)](#) on Page 173
- [Service \(CLI\)](#) on Page 173

Using the Serial Console

Control provides one RS-232 RJ45 console cable with the ES8510-XTE.

Note: A system COM port is required to use a serial console connection. If you do not have an available COM port, use the [Using a Telnet Console](#) procedure on [Page 121](#).

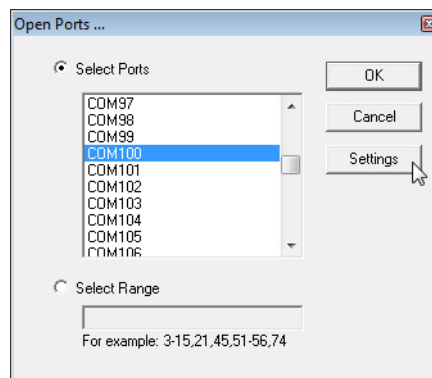

1. Attach the RS-232 DB9 connector to your PC COM port and connect the other end to the **Console** port of the ES8510-XTE. If you misplace the cable, you can use this console cable pin assignment or purchase a null-modem cable.

RJ45 Pin	DB9F Pin
1	7
2	9
3	4
4	5
5	1
6	3
7	2
8	8

2. Start a terminal program such as HyperTerminal or the Control Test Terminal program. You can download Test Terminal from the [FTP site](#).

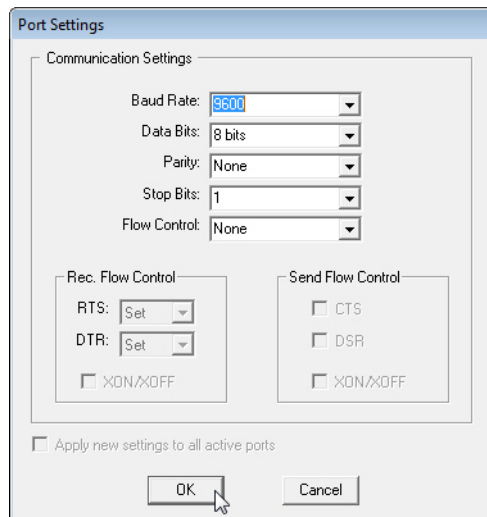

- [Test Terminal](#) - WCom2 (Windows XP through Windows 7)
 - Unzip Test Terminal and place it in a location that you can execute an application.
 - Execute **Wcom2.exe**.
 - Click the **File** menu, the **Open Port** option and then click the appropriate COM port number.

- Click **Settings**, use the values in the following table, and then click **Ok**.

Serial Settings	Value
Baud Rate	9600
Data bits	8
Parity	None
Stop Bit	1
Flow Control	None

- Click **Ok**.
- Press the cursor in the Terminal window and press the **Enter** key.

- HyperTerminal (Windows XP, *unless installed manually*)
 - *Windows XP*: Go to **Start -> Program -> Accessories -> Communications -> HyperTerminal**
 - Enter a name for the new console connection and click **OK**.
 - Enter the IP address in the **Host Address** text box.
 - Select **TCP/IP (Winsock)** in the **Connect using** drop-list and click **Ok**.
 - Set the serial settings using the [Serial Settings](#) table (above).
 - Press the **Enter** key in the Terminal window.
 - After it is connected, you can see the *Switch login* request, go to [Step 3](#).
3. Log in to the switch. The default user name is **admin**, password, **admin**.

```
Switch login: admin
Password:

Switch (version 2.7-20130314-15:23:41) .

Switch>
```

4. If necessary, configure the IP address for your network. The following example shows how to program an IP address of 192.168.11.252 with a Class B subnet mask (255.255.0.0).

```
Switch> enable
Switch# configure terminal
Switch(config)# int vlan1
Switch(config-if)# ip address 192.168.11.252/16
```

Using a Telnet Console

The ES8510-XTE supports a Telnet console or SSH console with the Command Line Interface (CLI), which is the same as what you see using the RS-232 console port. The SSH connection can secure all the configuration commands you send to the ES8510-XTE.

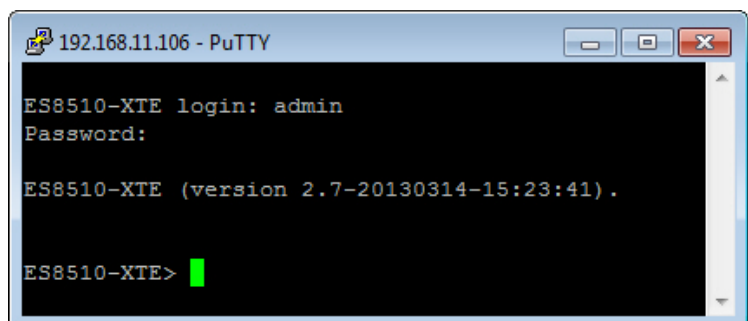

SSH is a client/server architecture while the ES8510-XTE is the SSH server. When you want to make SSH connection with the ES8510-XTE, you may need to download an SSH client tool.

The following subsections provide information for [Telnet](#) or an [SSH Client](#).

Telnet

The following shows how to open a Telnet connection to the ES8510-XTE using Windows XP.

1. Go to **Start -> Run -> cmd** and then press **Enter**.
2. Type **Telnet 192.168.250.250** (or the IP address of the ES8510-XTE) and then press **Enter**.
3. Enter the *Login Name* and *Password*. The default login name and password are **admin**.

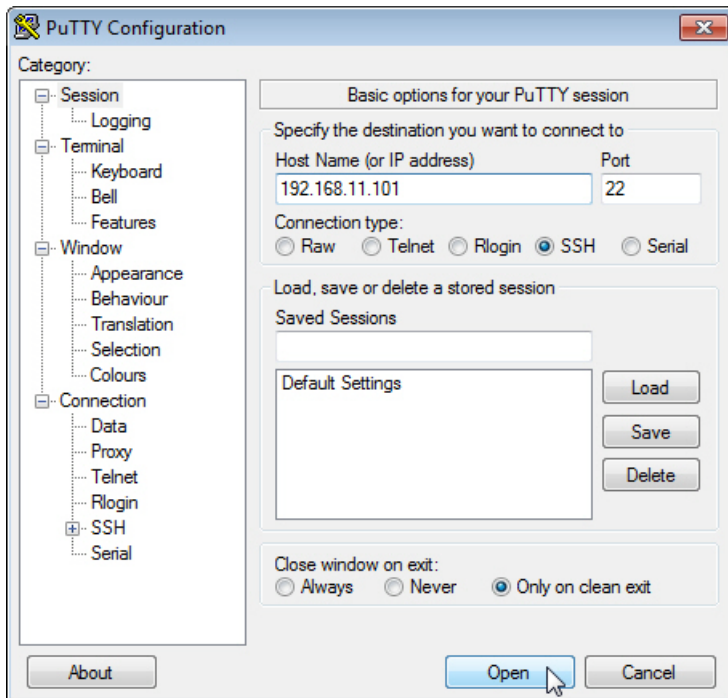

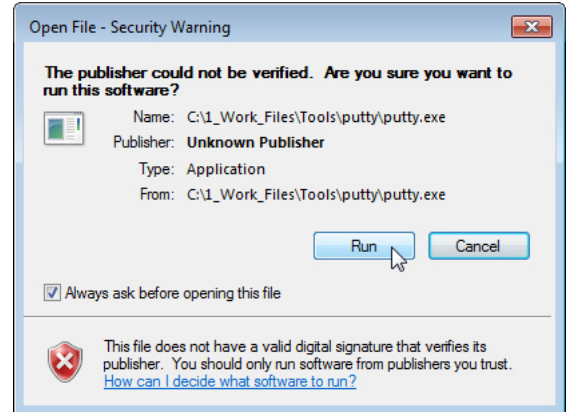

All the commands you see in SSH are the same as the CLI commands you see through the RS-232 console.

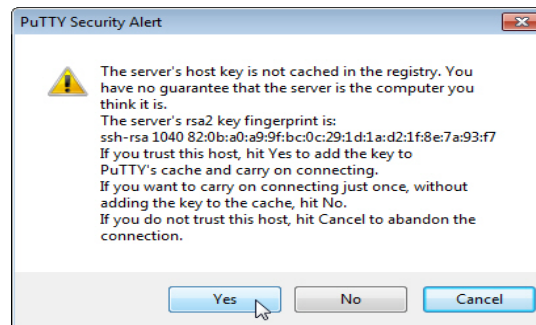

SSH Client

There are many free, sharewares, trials or charged SSH clients you can find on the internet. For example, PuTTY is a free and popular Telnet/SSH client. The following procedures shows how to login with SSH and PuTTY.

1. Download PuTTY (the Telnet and SSH client itself) from:
<http://www.chiark.greenend.org.uk/~sgtatham/putty/download.html>
2. Click **Run** to start PuTTY.
3. In the **Session** configuration, enter the **Host Name** (IP address of the ES8510-XTE), **Port number** (default = 22), click **SSH** for the protocol, and then click **Open** to start the SSH session console.

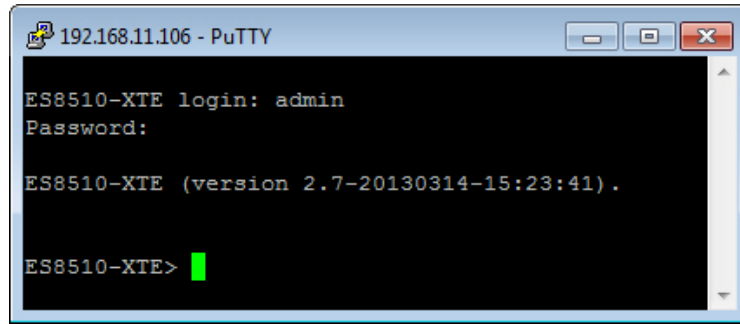

4. After click **Open**, you the cipher information displays in the popup screen. Click **Yes** to accept the Security Alert.

After few seconds, the SSH connection to the ES8510-XTE opens.

5. Enter the *Login Name* and *Password*. The default login name and password are **admin**.

All the commands you see in SSH are the same as the CLI commands you see through the RS-232 console.

Command Line Interface Introduction

The Command Line Interface (CLI) is the user interface to the ES8510-XTE embedded software. You can view the system information, show the status, configure the switch, and receive a response back from the system by keying in a command.

There are several different command modes. Each command mode has its own access ability, available command lines and uses different command lines to enter and exit. These modes are:

- [User EXEC Mode](#) on Page 123, which includes commands to ping or telnet to a remote device, and show some basic information and to access *Privileged EXEC* mode
- [Privileged EXEC Mode](#) on Page 126, which provides a view current configuration, reset default, reload switch, show system information, save configuration, and access *Global Configuration* mode
- [Global Configuration Mode](#) on Page 127, which you can use configure all ES8510-XTE features and access to one of the *Interface Configuration* modes
- [\(Port\) Interface Configuration](#) on Page 128, which can be used to configure port settings
- [\(VLAN\) Interface Configuration](#) on Page 129, which can be used to configure the settings for a specific VLAN

Refer to [Configuration Using the Command Line Interface \(CLI\)](#) on Page 119 to access the CLI.

User EXEC Mode

When you login to the ES8510-XTE with the CLI, you are in *User EXEC* mode.

In User EXEC Mode, you can ping, telnet to a remote device, and show some basic information.

Type the command and press **Enter**:

- **enable** to access *Privileged EXEC* mode ([Privileged EXEC Mode](#) on Page 126).
- **exit** to logout.
- **?** to see the command list.
- **list** to review the *User EXEC* mode commands and corresponding options.

Switch>	
enable	Turn on privileged mode command
exit	Exit current mode and down to previous mode
list	Print command list
ping	Send echo messages
quit	Exit current mode and down to previous mode
show	Show running system information
telnet	Open a telnet connection
traceroute	Trace route to destination

For the complete list of commands with options, refer to [User EXEC Mode](#) on Page 175.

Accessing the Options for a Command

The following example illustrates how to view the description and options for a command. This example illustrates the **show** command and the firmware version displayed may not reflect your firmware version.

Note: The **?** does not appear on the screen.

1. If you type **show?** (without a space between **show** and the **?**; do not press the **Enter** key) the ES8510-XTE provides a basic description of that command.

```
Switch login: admin
Password:

Switch (version 2.7 -20130314 - 15:23:41)
switch> show
      show Show running system information
```

2. If you type **show ?** (with a space between **show** and the **?**; do not press the **Enter** key) the ES8510-XTE provides information about the options for that command.

```
Switch> show
      arp          ARP table
      gvrp         GARP VLAN Registration Protocol
      ip           IP information
      version      Displays ISS version
Switch> show
```

3. Type **show ip ?** (with a space between **show** and the **?**, do not press the **Enter** key) to review the options for **ip**.

```
Switch> show ip
      forwarding  IP forwarding status
      route       IP routing table
```

4. Type **show ip route** and press the **Enter** key to view the IP routing tables for the ES8510-XTE.

```
Switch> show ip route
Codes: K - kernel route, C - connected, S - static, R - RIP, O - OSPF,
      B - BGP, > - selected route, * - FIB route

S>* 0.0.0.0/0 [1/0] via 192.168.250.1, sw0.1
C>* 127.0.0.0/8 is directly connected, lo
C>* 192.0.0.0/8 is directly connected, sw0.1
```

5. If you type **list** and press **Enter**, the ES8510-XTE provides you information about all of the commands and options for a mode. The following example shows the available commands and their options for *User EXEC* mode.

```
ES8510-XTE> list
enable
exit
list
ping A.B.C.D
ping X:X::X:X
quit
show arp
show gvrp statistics [IFNAME]
show ip forwarding
show ip route
show ip route A.B.C.D
show ip route A.B.C.D/M
show ip route supernets-only
show version
telnet WORD
telnet WORD PORT
traceroute WORD
```

Privileged EXEC Mode

If you type **enable** in *User EXEC* mode, you can access *Privileged EXEC* mode. In this mode, the ES8510-XTE allows you to view current configuration, reset default, reload switch, show system information, save configuration, and enter *Global Configuration* mode.

Type the following commands and press the **Enter** key:

- **configure terminal** to access *Global Configuration* mode ([Global Configuration Mode](#) on Page 127).
- **exit** to close the CLI.
- **?** to see the command list.
- **list** to review the *Privileged EXEC* mode commands and corresponding options.

For the complete list of commands and options, refer to [Privileged EXEC Mode](#) on Page 176.

```
Switch>enable
Switch#
archive      manage archive files
clear        Reset functions
clock        Configure time-of-day clock
configure    Configuration from vty interface
copy         Copy from one file to another
debug        Debugging functions
disable      Turn off privileged mode command
dot1x        IEEE 802.1x standard access security control
end          End current mode and change to enable mode
exit         Exit current mode and down to previous mode
list         Print command list
no           Negate a command or set its defaults
pager        Terminal pager
ping         Send echo messages
quit         Exit current mode and down to previous mode
reboot       Reboot system
reload       copy a default-config file to replace the current one
show         Show running system information
telnet       Open a telnet connection
terminal     Set terminal line parameters
traceroute   Trace route to destination
write        Write running configuration to memory, network, or terminal
```

Global Configuration Mode

If you type **configure terminal** in *Privileged EXEC* mode, you can then access *Global Configuration* mode. In *Global Configuration* mode, you can configure all ES8510-XTE features. Type the following commands and press the **Enter** key:

- **interface IFNAME/VLAN**, to access the corresponding *Interface Configuration* mode.
- **exit** to return to *Privileged EXEC* mode.
- **?** to see the command list.
- **list** to review the *Global Configuration* mode commands and corresponding options.

The following is a list of available command lists of *Global Configuration* mode. For the complete list of commands and options, refer to [Global Configuration Mode](#) on Page 181..

```
Switch# configure terminal
Switch(config)#
  administrator      Administrator account setting
  arp                 Set a static ARP entry
  auth               Authentication
  clock              Configure time-of-day clock
  default             Set a command to its defaults
  dot1x              IEEE 802.1x standard access security control
  end                 End current mode and change to enable mode
  ethertype          Ethertype
  exit               Exit current mode and down to previous mode
  gvrp               GARP VLAN Registration Protocol
  hostname           Set system's network name
  interface           Select an interface to configure
  ip                 IP information
  ipv6               IP information
  lacp               Link Aggregation Control Protocol
  list               Print command list
  lldp               Link Layer Discovery Protocol
  log                Logging control
  loop-protect       Ethernet loop protection
  mac-address-table  Mac address table
  mirror             Port mirroring
  modbus             Modbus TCP slave
  nameserver         DNS Server
  netvision          NetVision protocol
  no                 Negate a command or set its defaults
  ntp                Configure NTP
  qos                Quality of Service (QoS)
  redundant-ring     Configure redundant ring
  relay              relay output type information
  router             Enable a routing process
  service            System service
  sfp                Small form-factor pluggable
  smtp-server        SMTP server configuration
  snmp-server        SNMP server
  spanning-tree      spanning tree algorithm
  trunk              Trunk group configuration
  vlan               Virtual LAN
  warning-event      Warning event selection
  write-config       Specify config files to write to
```

(Port) Interface Configuration

When you type **interface IFNAME** in *Global Configuration* mode, you can access *Interface Configuration* mode. In this mode you can configure port settings.

The port interface names for the Fast Ethernet ports are fa1 through fa10

Type the following commands and press the **Enter** key:

- **exit** to return to *Privileged EXEC* mode.
- **?** to see the command list.
- **list** to review the *Interface Configuration* mode commands and corresponding options. The following list is the available commands for the *Port Interface Configuration* mode.

For the complete list of commands and options, refer to [Port Interface Configuration Mode](#) on Page 186.

```
Switch(config)# interface fa1
Switch(config-if)#
  acceptable          Configure 802.1Q acceptable frame types of a port
  auto-negotiation    Enable auto-negotiation state of a given port
  description         Interface specific description
  dot1x              IEEE 802.1x standard access security control
  duplex             Specify duplex mode of operation for a port
  end                End current mode and change to enable mode
  exit               Exit current mode and down to previous mode
  flowcontrol        Set flow-control value for an interface
  garp               General Attribute Registration Protocol
  ingress            IEEE 802.1Q ingress filtering features
  lacp               Link Aggregation Control Protocol
  list               Print command list
  loopback           Specify loopback mode of operation for a port
  mdix               Enable mdix state of a given port
  no                 Negate a command or set its defaults
  qos                Quality of Service (QoS)
  quit               Exit current mode and down to previous mode
  rate-limit         Rate limit configuration
  sfp                Small form-factor pluggable
  shutdown           Shutdown the selected interface
  spanning-tree      spanning-tree protocol
  speed              Specify the speed of a Fast Ethernet port
  switchport         Set switching mode characteristics
```

(VLAN) Interface Configuration

If you type **interface VLAN VLAN-ID** in *Global Configuration* mode, you can access *VLAN Interface Configuration* mode. In this mode, you can configure the settings for the specific VLAN.

The VLAN interface name of VLAN 1 is VLAN 1, VLAN 2 is VLAN 2.

Type **exit** to return to the previous mode. Type **?** to see the available command list.

For the complete list of commands and options, refer to [VLAN Interface Configuration Mode](#) on Page 188.

```
Switch(config)# interface vlan 1
Switch(config-if)#
  description  Interface specific description
  end          End current mode and change to enable mode
  exit        Exit current mode and down to previous mode
  ip          Interface Internet Protocol config commands
  ipv6       Interface Internet Protocol config commands
  list        Print command list
  no         Negate a command or set its defaults
  quit       Exit current mode and down to previous mode
  shutdown   Shutdown the selected interface
```

Command Mode Summary

This table is a summary of the five command modes.

Mode: Main Function	Access and Exit Mode	Prompt
User EXEC: This is the first level of access. You can ping, telnet a remote device, and show some basic information.	<ul style="list-style-type: none"> Access <i>User EXEC</i> mode: Login successfully. Exit: exit to logout. Next mode: Type enable to enter <i>Privileged EXEC</i> mode. 	Switch>
Privileged EXEC: Allows you to view current configuration, reset the default values, reload the switch, show system information, save configuration and enter <i>Global Configuration</i> mode.	<ul style="list-style-type: none"> Access <i>Privileged EXEC</i> mode: Type enable in <i>User EXEC</i> mode. Exec: Type disable to exit to <i>User EXEC</i> mode. Type exit to logout. Next mode: Type configure terminal to enter <i>Global Configuration</i> mode. 	Switch#
Global Configuration: Configure all of the features that the ES8510-XTE provides.	<ul style="list-style-type: none"> Access <i>Global Configuration</i> mode: Type configure terminal in <i>Privileged EXEC</i> mode. Exit: Type exit or end or press Ctrl-Z to exit. Next mode: Type interface IFNAME/ VLAN VID to enter <i>Interface Configuration</i> mode. 	Switch(config)#
Port Interface Configuration: Configure port related settings.	<ul style="list-style-type: none"> Access <i>Port Interface Configuration</i> mode: Type interface IFNAME in global configuration mode. Exit: Type exit or Ctrl+Z to <i>Global Configuration</i> mode. Type end to return to <i>Privileged EXEC</i> mode. 	Switch(config-if)#

Mode: Main Function	Access and Exit Mode	Prompt

The following are useful commands to save you typing time and to avoid typing errors.

Press **?** to see all of the available commands in a mode. It helps you to see the next command you can type.

```
Switch(config)# interface (?)
IFNAME      Interface's name
vlan        Select a vlan to configure
```

Type a *Character?* (shown below) to see all of the available commands starting with this character.

```
Switch(config)# a?
administrator Administrator account setting
arp              Set a static ARP entry
```

Press the **Tab** key, which helps you to input the command quicker. If there is only one available command in the next, click the **Tab** key to help finish the typing.

```
Switch# co (tab) (tab)
Switch# configure terminal

Switch(config)# ad (tab)
Switch(config)# administrator
```

Key Combination	Function
Ctrl+C	To stop executing the unfinished command.
Ctrl+S	To lock the screen of the terminal - you cannot input any command.
Ctrl+Q	To unlock the screen which is locked by Ctrl+S .
Ctrl+Z	To exit <i>Configuration</i> mode.

VTY Configuration Locked (Error Message)

An alert message appears when multiple users are attempting to configure the ES8510-XTE. If the administrator is in *Configuration* mode, then the web users cannot change settings. The ES8510-XTE allows only one administrator to configure the switch at a time.

Basic Settings (CLI)

The Basic Setting group provides you with the ability to configure switch information, IP address, User name/ Password of the system. It also allows you to do firmware upgrade, backup and restore configuration, reload factory default, and reboot the system.

Optionally, you can use the web user interface for configuration, see [Basic Settings](#) on Page 37.

This table provides detailed information about the CLI commands for basic settings.

Switch Setting	
System Name	<pre>Switch(config)# hostname DWORD Network name of this system Switch(config)# hostname ES8510-XTE Switch(config)#</pre>

Factory Default	
Factory Default	Switch# reload default-config file Reload OK! Switch# reboot
System Reboot	
Reboot	Switch# reboot

Port Configuration (CLI)

The Port Configuration group allows you to enable/disable port state, or configure port auto-negotiation, speed, duplex, flow control, rate limit control, and port aggregation settings. It also allows you to view port status and aggregation information.

Optionally, you can use the web user interface for configuration, see [Port Configuration](#) on Page 58.

This table provides detailed information about the CLI commands for port configuration.

Port Control	
Port Control - State	Switch(config-if)# shutdown -> Disable port state Port1 Link Change to DOWN interface fastethernet1 is shutdown now.
	Switch(config-if)# no shutdown -> Enable port state Port1 Link Change to DOWN Port1 Link Change to UP interface fastethernet1 is up now. Switch(config-if)# Port1 Link Change to UP
Port Control - Auto Negotiation	Switch(config)# interface fa1 Switch(config-if)# auto-negotiation Auto-negotiation of port 1 is enabled!
Port Control - Force Speed/ Duplex	Switch(config-if)# speed 100 Port1 Link Change to DOWN set the speed mode ok! Switch(config-if)# Port1 Link Change to UP Switch(config-if)# duplex full set the duplex mode ok!

Port Control (continued)	
Port Control – Flow Control	<pre>Switch(config-if)# flowcontrol on Flowcontrol on for port 1 set ok! Switch(config-if)# flowcontrol off Flowcontrol off for port 1 set ok!</pre>
Port Status	
Port Status	<pre>Switch# show interface fa1 Interface fastethernet1 Administrative Status : Enable Operating Status : Connected Duplex : Full Speed : 100 Flow Control :off Default Port VLAN ID: 1 Ingress Filtering : Disabled Acceptable Frame Type : All Port Security : Disabled Auto Negotiation : Disable Loopback Mode : None STP Status: forwarding Default CoS Value for untagged packets is 0. Mdx mode is Disable. Medium mode is Copper.</pre> <p>Note: <i>Administrative Status -> Port state of the port. Operating status -> Current status of the port. Duplex -> Duplex mode of the port. Speed -> Speed mode of the port. Flow control -> Flow Control status of the port.</i></p>
Rate Control	
Rate Control – Ingress or Egress	<pre>Switch(config-if)# rate-limit egress Outgoing packets ingress Incoming packets</pre> <p>Note: <i>To enable rate control, you should select the Ingress or Egress rule first; then assign the packet type and bandwidth.</i></p>
Rate Control – Filter Packet Type	<pre>Switch(config-if)# rate-limit ingress mode all Limit all frames broadcast Limit Broadcast frames flooded-unicast Limit Broadcast, Multicast and flooded unicast frames multicast Limit Broadcast and Multicast frames</pre> <pre>Switch(config-if)# rate-limit ingress mode broadcast Set the ingress limit mode broadcast ok.</pre>
Rate Control – Bandwidth	<pre>Switch(config-if)# rate-limit ingress bandwidth <0-100> Limit in megabits per second (0 is no limit)</pre> <pre>Switch(config-if)# rate-limit ingress bandwidth 8 Set the ingress rate limit 8Mbps for Port 1.</pre>

Port Trunking	
LACP	<pre>Switch(config)# lacp group 1 fa1 Group 1 based on LACP(IEEE 802.3ad) is enabled! Note: The interface list is fa8-10. Ports with a different speeds cannot be aggregated together.</pre>
Static Trunk	<pre>Switch(config)# trunk group 2 fa6-7 Trunk group 2 enable ok!</pre>
Display – LACP	<pre>Switch# show lacp internal LACP group 1 internal information: LACP Port Admin Oper Port Port Priority Key Key State -----+-----+-----+-----+----- 8 1 8 8 0x45 9 1 9 9 0x45 10 1 10 10 0x45 LACP group 2 is inactive LACP group 3 is inactive LACP group 4 is inactive</pre>
Display – Trunk	<pre>Switch# show trunk group 1 FLAGS: I -> Individual P -> In channel D -> Port Down Trunk Group GroupID Protocol Ports -----+-----+----- 1 LACP 8(D) 9(D) 10(D) Switch# show trunk group 2 FLAGS: I -> Individual P -> In channel D -> Port Down Trunk Group GroupID Protocol Ports -----+-----+----- 2 Static 6(D) 7(P) Switch#</pre>

Network Redundancy (CLI)

It is critical for industrial applications that the network remains running at all times. The ES8510-XTE supports:

- Standard Rapid Spanning Tree Protocol (STP) and Rapid Spanning Tree Protocol (RSTP)
The ES8510-XTE supports RSTP versions IEEE 802.1D-2004, IEEE 802.1D-1998 STP, and IEEE 802.1w RSTP.
- Multiple Spanning Tree Protocol (MSTP)
MSTP implements IEEE 802.1s, which uses RSTP for rapid convergence, enables VLANs to be grouped into a spanning-tree instance, with each instance having a spanning-tree topology independent of other spanning-tree instances. This architecture provides multiple forwarding paths for data traffic, enables load balancing, and reduces the number of spanning-tree instances required to support a large number of VLANs. MSTP was originally defined in the IEEE 802.1s and later merged into the IEEE 802.1Q-2003 specification.
- Redundant Ring
The Redundant Ring features 0 ms for restore and about 5 ms for fail over for copper.
- Rapid Dual Homing (RDH)
Advanced RDH technology allows the ES8510-XTE to connect with a core managed switch easily and conveniently. With RDH technology, you can also couple several Rapid Super Rings or RSTP groups together, which is also known as Auto Ring Coupling.

Optionally, you can use the web user interface for configuration, see [Network Redundancy](#) on Page 64.

This table provides detailed information about the CLI command lines for network redundancy.

Global (STP, RSTP, and MSTP)	
Enable	Switch(config)# spanning-tree enable
Disable	Switch(config)# spanning-tree disable
Mode	<pre>Switch(config)# spanning-tree mode rst the rapid spanning-tree protocol (802.1w) stp the spanning-tree prtocol (802.1d) mst the multiple spanning-tree protocol (802.1s)</pre> <pre>Switch(config)# spanning-tree mode Switch(config)# spanning-tree mode mst Spanning-Tree Mode change to be MSTP (802.1s)</pre> <pre>Switch(config)# spanning-tree mode stp Spanning-Tree Mode change to be STP(802.1d) .</pre> <pre>Switch(config)# spanning-tree mode rst Spanning-Tree Mode change to be RSTP(802.1w) .</pre> <pre>Switch(config)# spanning-tree mode mst Spanning-Tree Mode change to be MSTP(802.1s).</pre>

VLAN (CLI)

A Virtual LAN (VLAN) is a logical grouping of nodes for the purpose of limiting a broadcast domain to specific members of a group without physically grouping the members. The VLAN allows you to isolate network traffic so that only members of the VLAN could receive traffic from the same VLAN members. Basically, creating a VLAN from a switch is the logical equivalent of physically reconnecting a group of network devices to another Layer 2 switch, without actually disconnecting these devices from their original switches.

The ES8510-XTE supports IEEE 802.1Q VLAN, which is also known as Tag-Based VLAN. This Tag-Based VLAN allows a VLAN to be created across different switches. IEEE 802.1Q tag-based VLAN makes use of VLAN control information stored in a VLAN header attached to IEEE 802.3 packet frames. This tag contains a VLAN Identifier (VID) that indicates which VLAN a frame belongs to. Since each switch only has to check a frame's tag, without the need to dissect the contents of the frame, this also saves a lot of computing resources within the switch.

Optionally, you can use the web user interface for configuration, see [VLAN](#) on Page 78.

The following table provides detailed information about command lines for the VLAN.

VLAN Port Configuration	
VLAN Port PVID	Switch(config-if)# switchport trunk native vlan 2 Set port default vlan id to 2 success
Port Accept Frame Type	Switch(config)# inter fal Switch(config-if)# acceptable frame type all any kind of frame type is accepted! Switch(config-if)# acceptable frame type vlantaggedonly only vlan-tag frame is accepted!
Ingress Filtering (for Fast Ethernet Port 1)	Switch(config)# interface fal Switch(config-if)# ingress filtering enable ingress filtering enable Switch(config-if)# ingress filtering disable ingress filtering disable
Egress rule – Untagged (for VLAN 2)	Switch(config-if)# switchport access vlan 2 switchport access vlan - success
Egress rule – Tagged (for VLAN 2)	Switch(config-if)# switchport trunk allowed vlan add 2
Display – Port Ingress Rule (PVID, Ingress Filtering, Acceptable Frame Type)	Switch# show interface fal Interface fastethernet1 Administrative Status : Enable Operating Status : Not Connected Duplex : Auto Speed : Auto Flow Control :off Default Port VLAN ID: 2 Ingress Filtering : Disabled Acceptable Frame Type : All Port Security : Disabled Auto Negotiation : Enable Loopback Mode : None STP Status: disabled Default CoS Value for untagged packets is 0. Mdix mode is Auto. Medium mode is Copper.

VLAN Port Configuration (continued)

Display	<pre>Switch# show running-config ... ! interface vlan1 ip address 192.168.250.17/24 ip igmp no shutdown ! ...</pre>

Private VLAN (CLI)

A private VLAN helps to resolve the primary VLAN ID shortage, client ports' isolation and network security issues. The Private VLAN features provides primary and secondary VLANs within a single switch.

Primary VLAN: The uplink port is usually a member of the primary VLAN. A primary VLAN contains promiscuous ports that can communicate with Secondary VLANs.

Secondary VLAN: The client ports are usually defined within secondary VLAN. The secondary VLAN includes Isolated and Community VLANs. The client ports can be isolated VLANs or can be grouped in the same Community VLAN. The ports within the same community VLAN can communicate with each other, however, the isolated VLAN ports cannot.

Optionally, you can use the web user interface for configuration, see [Private VLAN](#) on Page 86.

The following table provides detailed information about command lines for private VLAN port configuration, VLAN configuration, and VLAN table display.

Private VLAN Configuration	
Create VLAN	<pre>Switch(config)# vlan 2 vlan 2 success Switch(config-vlan)# end End current mode and change to enable mode exit Exit current mode and down to previous mode list Print command list name Assign a name to vlan no no private-vlan Configure a private VLAN</pre>
Private VLAN Type	<p><i>Go to the VLAN you want configure first.</i></p> <pre>Switch(config)# vlan (VID)</pre>
Choose the Types	<pre>Switch(config-vlan)# private-vlan community Configure the VLAN as an community private VLAN isolated Configure the VLAN as an isolated private VLAN primary Configure the VLAN as a primary private VLAN</pre>
Primary Type	<pre>Switch(config-vlan)# private-vlan primary <cr></pre>

Traffic Prioritization (CLI)

Quality of Service (QoS) provides a traffic prioritization mechanism which allows you to deliver better service to certain flows. QoS can also help to alleviate congestion problems and ensure high-priority traffic is delivered first. This section allows you to configure Traffic Prioritization settings for each port with regard to setting priorities.

ES8510-XTE QoS supports four physical queues, weighted fair queuing (WRR) and Strict Priority scheme, that follows the IEEE 802.1p CoS tag and IPv4 TOS/DiffServ information to prioritize the traffic of your industrial network.

Optionally, you can use the web user interface for configuration, see [Traffic Prioritization](#) on Page 89. This table provides detailed information about command lines for traffic prioritization configuration

QoS Setting	
Queue Scheduling – Strict Priority	Switch(config)# qos queue-sched sp Strict Priority wrr Weighted Round Robin (Use an 8,4,2,1 weight) Switch(config)# qos queue-sched sp
Queue Scheduling - WRR	Switch(config)# qos queue-sched wrr
Port Setting – CoS (Default Port Priority)	Switch(config)# interface fa1 Switch(config-if)# qos cos DEFAULT-COS Assign an priority (7 highest) Switch(config-if)# qos cos 7 The default port CoS value is set 7 ok. <i>Note: When change the port setting, you should select the specific port first. fa1 means Fast Ethernet port 1.</i>
Port Setting – Trust Mode- CoS Only	Switch(config)# interface fa1 Switch(config-if)# qos trust cos The port trust is set CoS only ok.
Port Setting – Trust Mode- CoS First	Switch(config)# interface fa1 Switch(config-if)# qos trust cos-first The port trust is set CoS first ok.
Port Setting – Trust Mode- DSCP Only	Switch(config)# interface fa1 Switch(config-if)# qos trust dscp The port trust is set DSCP only ok.
Port Setting – Trust Mode- DSCP First	Switch(config)# interface fa1 Switch(config-if)# qos trust dscp-first The port trust is set DSCP first ok.
Display – Queue Scheduling	Switch# show qos queue-sched QoS queue scheduling scheme : Weighted Round Robin (Use an 8,4,2,1 weight)

QoS Setting (cont.)	
Display – Port Setting - Trust Mode	<pre>Switch# show qos trust QoS Port Trust Mode : Port Trust Mode -----+----- 1 DSCP first 2 COS only 3 COS only 4 COS only 5 COS only 6 COS only 7 COS only 8 COS only 10 COS only</pre>

Multicast Filtering (CLI)

For multicast filtering, the ES8510-XTE uses IGMP (Internet Group Management Protocol) Snooping technology. IGMP is an internet protocol that provides a way for internet device to report its multicast group membership to adjacent routers. Multicasting allows one computer on the internet to send data to a multitude of other computers that have identified themselves as being interested in receiving the originating computers data.

Multicasting is useful for such applications as updating the address books of mobile computer users in the field, sending out newsletters to a distribution list, and broadcasting streaming media to an audience that has tuned into the event by setting up multicast group membership.

In effect, IGMP Snooping manages multicast traffic by making use of switches, routers, and hosts that support IGMP. Enabling IGMP Snooping allows the ports to detect IGMP queries, report packets, and manage multicast traffic through the switch. IGMP has three fundamental types of messages, as shown in the following table.

Message	Description
Query	A message sent from the querier (an IGMP router or a switch) that asks for a response from each host that belongs to the multicast group.
Report	A message sent by a host to the querier to indicate that the host wants to be or is a member of a given group indicated in the report message.
Leave Group	A message sent by a host to the querier to indicate that the host has quit as a member of a specific multicast group.

You can enable **IGMP Snooping** and **IGMP Query** functions. This section illustrates the information of the IGMP Snooping function, including different multicast groups' VID and member ports, and IP multicast addresses that range from 224.0.0.0 to 239.255.255.255.

Optionally, you can use the web user interface for configuration, see [Multicast Filtering](#) on Page 92.

The following table provides detailed information about command lines for multicast filtering configuration.

IGMP Snooping	
IGMP Snooping - Global	Switch(config)# ip igmp snooping IGMP snooping is enabled globally. Specify on which vlans IGMP snooping enables
IGMP Snooping - VLAN	Switch(config)# ip igmp snooping vlan VLANLIST allowed vlan list all all existed vlan Switch(config)# ip igmp snooping vlan 1-2 IGMP snooping is enabled on VLAN 1-2.
Disable IGMP Snooping - Global	Switch(config)# no ip igmp snooping IGMP snooping is disabled globally ok.
Disable IGMP Snooping - VLAN	Switch(config)# no ip igmp snooping vlan 3 IGMP snooping is disabled on VLAN 3.

IGMP Snooping (cont.)	
Display – IGMP Snooping Setting	<pre>Switch# sh ip igmp interface vlan1 enabled: Yes version: IGMPv1 query-interval; 125s query-max-response-time: 10s Switch# sh ip igmp snooping IGMP snooping is globally enabled Vlan1 is IGMP snooping enabled Vlan2 is IGMP snooping enabled Vlan3 is IGMP snooping disabled</pre>

Force Filtering	
Enable	<pre>Switch(config)# mac-address-table force filtering Filtering unknown multicast addresses ok!</pre>
Disable	<pre>Switch(config)# no mac-address-table force filtering Flooding unknown multicast addresses ok!</pre>

SNMP (CLI)

Simple Network Management Protocol (SNMP) is a protocol used for exchanging management information between network devices. SNMP is a member of the TCP/IP protocol suite. The ES8510-XTE supports SNMP v1 and v2c and V3.

An SNMP managed network consists of two main components: agents and a manager. An agent is a management software module that resides in a managed switch. An agent translates the local management information from the managed device into a SNMP compatible format. The manager is the console through the network.

Optionally, you can use the web user interface for configuration, see [SNMP](#) on Page 95.

The following table provides detailed information about command lines for SNMP configuration.

SNMP Community	
Read Only Community	Switch(config)# snmp-server community public ro community string add ok
Read Write Community	Switch(config)# snmp-server community private rw community string add ok
SNMP Trap	
Enable Trap	Switch(config)# snmp-server enable trap Set SNMP trap enable ok.
SNMP Trap Server IP without specific community name	Switch(config)# snmp-server host 192.168.250.33 SNMP trap host add OK.
SNMP Trap Server IP with version 1 and community	Switch(config)# snmp-server host 192.168.250.33 version 1 private SNMP trap host add OK. Note: Private is the community name, version 1 is the SNMP version.
SNMP Trap Server IP with version 2 and community	Switch(config)# snmp-server host 192.168.250.33 version 2 private SNMP trap host add OK.
Disable SNMP Trap	Switch(config)# no snmp-server enable trap Set SNMP trap disable ok.
Display	Switch# sh snmp-server trap SNMP trap: Enabled SNMP trap community: public Switch# show running-config snmp-server community public ro snmp-server community private rw snmp-server enable trap snmp-server host 192.168.250.33 version 2 admin snmp-server host 192.168.250.33 version 1 admin

Security (CLI)

The ES8510-XTE provides several security features for you to secure your connection. Optionally, you can use the web user interface for configuration, see [Security](#) on Page 98. This table provides information about the command lines for security configuration.

Port Security	
Add MAC	Switch(config)# mac-address-table static 00c0.4e30.0101 vlan 1 interface fa1 mac-address-table unicast static set ok!
Port Security	Switch(config)# interface fa1 Switch(config-if)# switchport port-security Disables new MAC addresses learning and aging activities! Rule: Add the static MAC, VLAN and Port binding first, then enable the port security to stop new MAC learning.
Disable Port Security	Switch(config-if)# no switchport port-security Enable new MAC addresses learning and aging activities!
Display	Switch# show mac-address-table static Destination Address Address Type Vlan Destination Port ----- 00c0.4e30.0101 Static 1 fa1

User name/ password for authentication	Switch(config)# dot1x username chris passwd chris vlan 1

Warnings (CLI)

The ES8510-XTE provides several types of warning features for you to remotely monitor the status of the attached devices or changes in your network. The features include Fault Relay, System Log, and SMTP Email Alert.

Optionally, you can use the web user interface for configuration, see [Warning](#) on Page 104.

This table provides detailed information about the command lines of the warning configuration.

Fault Relay Output	
Relay Output	<pre>Switch(config)# relay 1 di DI State dry dry output ping ping failure port port link failure power power failure ring super ring failure</pre> <p><i>Note: Select Relay 1 or 2 first and then the event types</i></p>
DI State	<pre>Switch(config)# relay 1 di <1-2> DI number Switch(config)# relay 1 di 1 high high is abnormal low low is abnormal Switch(config)# relay 1 di 1 high</pre>
Dry Output	<pre>Switch(config)# relay 1 dry <0-4294967295> turn on period in second Switch(config)# relay 1 dry 5 <0-4294967295> turn off period in second Switch(config)# relay 1 dry 5 5</pre>
Ping Failure	<pre>Switch(config)# relay 1 ping 192.168.250.33 <cr> reset reset a device Switch(config)# relay 1 ping 192.168.250.33 reset <1-65535> reset time Switch(config)# relay 1 ping 192.168.250.33 reset 60 <0-65535> hold time to retry Switch(config)# relay 1 ping 192.168.250.33 reset 60 60</pre>
Port Link Failure	<pre>Switch(config)# relay 1 port PORTLIST port list Switch(config)# relay 1 port fal-5</pre>
Power Failure	<pre>Switch(config)# relay 1 power <1-2> power id Switch(config)# relay 1 power 1 Switch(config)# relay 1 power 2</pre>
Super Ring Failure	<pre>Switch(config)# relay 1 ring</pre>
Disable Relay	<pre>Switch(config)# no relay <1-2> relay id Switch(config)# no relay 1 (Relay_ID: 1 or 2) <cr></pre>

Fault Relay Output (cont.)	
Display	<pre>Switch# show relay 1 Relay Output Type : Port Link Port : 1, 2, 3, 4 Switch# show relay 2 Relay Output Type : Super Ring</pre>
Event Selection	
Event Selection	<pre>Switch(config)# warning-event coldstart Switch cold start event warmstart Switch warm start event linkdown Switch link down event linkup Switch link up event authentication Authentication failure event di Switch di event fault-relay Switch fault relay event loop-protect Switch loop protection event power Switch power failure event sfp Switch SFP event ring Switch ring event time-sync Switch time synchronize event</pre>
Example: Cold Start event	<pre>Switch(config)# warning-event coldstart Set cold start event enable ok.</pre>
Example: Link Up event	<pre>Switch(config)# warning-event linkup [IFNAME] Interface list, ex: fastethernet1 Switch(config)# warning-event linkup fastethernet1 Set fa5 link up event enable ok.</pre>
Display	<pre>Switch# show warning-event Warning Event: Cold Start: Enabled Warm Start: Disabled Authentication Failure: Disabled Link Down: fa4-5 Link Up: fa4-5 Power Failure: Ring: Disabled Fault Relay: Disabled Time synchronize Failure: Disabled SFP DDM: Enabled DI: Disabled</pre>

Syslog Configuration

Disable	Switch(config)# no log syslog local
SMTP Configuration	
SMTP Enable	Switch(config)# smtp-server enable email-alert SMTP Email Alert set enable ok.
Sender mail	Switch(config)# smtp-server server 192.168.250.100 ACCOUNT SMTP server mail account, ex: admin@control.com Switch(config)# smtp-server server 192.168.250.100 admin@control.com SMTP Email Alert set Server: 192.168.250.100, Account: admin@control.com ok.
Receiver mail	Switch(config)# smtp-server receipt 1 abc@control.com SMTP Email Alert set receipt 1: abc@control.com ok.
Authentication with user name and password	Switch(config)# smtp-server authentication username admin password admin SMTP Email Alert set authentication Username: admin, Password: admin <i>Note: You can assign string to user name and password.</i>
Disable SMTP	Switch(config)# no smtp-server enable email-alert SMTP Email Alert set disable ok.
Disable Authentication	Switch(config)# no smtp-server authentication SMTP Email Alert set Authentication disable ok.
Display	Switch# sh smtp-server SMTP Email Alert is Enabled Server: 192.168.250.100, Account: admin@control.com Authentication: Enabled Username: admin, Password: admin SMTP Email Alert Receipt: Receipt 1: abc@control.com Receipt 2: Receipt 3: Receipt 4:

Monitor and Diag (CLI)

The ES8510-XTE provides several types of features for you to monitor the status of the switch or diagnostic for you to check the problem when encountering problems related to the switch. The features include MAC Address Table, Port Statistics, Port Mirror, Event Log, and Ping.

Optionally, you can use the web user interface for configuration, see [Monitor and Diag](#) on Page 110.

This table provides detailed information about command lines of the Monitor and Diag configuration.

MAC Address Table	
Aging Time	<pre>Switch(config)# mac-address-table aging-time 350 mac-address-table aging-time set ok!</pre> <p>Note: The default aging timeout value is 300.</p>
Add Static Unicast MAC address	<pre>Switch(config)# mac-address-table static 00c0.4e30.0101 vlan 1 interface fastethernet5 mac-address-table ucast static set ok!</pre> <p>Rule: mac-address-table static MAC_address VLAN VID interface interface_name</p>
Add Multicast MAC address	<pre>Switch(config)# mac-address-table multicast 00c0.4e30.0101 vlan 1 interface fa3-4 Adds an entry in the multicast table ok!</pre> <p>Rule: mac-address-table multicast MAC_address VLAN VID interface_list interface_name/range</p>
Show MAC Address Table – All types	<pre>Switch# show mac-address-table ***** UNICAST MAC ADDRESS ***** Destination Address Address Type Vlan Destination Port ----- 00c0.4e30.ca3b Dynamic 1 fa1 00c0.4e30.0386 Dynamic 1 fa2 00c0.4e30.0101 Static 1 fa3 00c0.4e30.0102 Static 1 fa3 00c0.4e30.0100 Management 1 ***** MULTICAST MAC ADDRESS ***** Vlan Mac Address COS Status Ports ----- 1 00c0.4e30.0800 0 fa6 1 00c0.4e30.ffffa 0 fa4,fa6</pre>

Show MAC Address Table – Multicast MAC addresses	<pre>Switch# show mac-address-table multicast Vlan Mac Address COS Status Ports ----- 1 00c0.4e30.0800 0 fa5-6 1 00c0.4e30.ffffa 0 fa3,fa5-6</pre>

MAC Address Table (continued)	
Show MAC Address Table – Static MAC addresses	<pre>Switch# show mac-address-table static Destination Address Address Type Vlan Destination Port ----- 00c0.4e30.0101 Static 1 fa4 00c0.4e30.0102 Static 1 fa5</pre>
Show Aging timeout time	<pre>Switch# show mac-address-table aging-time the mac-address-table aging-time is 300 sec.</pre>
Port Statistics	
Port Statistics	<pre>Switch# show rmon statistics fa4 (select interface) Interface fastethernet4 is enable connected, which has Inbound: Good Octets: 178792, Bad Octets: 0 Unicast: 598, Broadcast: 1764, Multicast: 160 Pause: 0, Undersize: 0, Fragments: 0 Oversize: 0, Jabbers: 0, Discards: 0 Filtered: 0, RxError: 0, FCSError: 0 Outbound: Good Octets: 330500 Unicast: 602, Broadcast: 1, Multicast: 2261 Pause: 0, Deferred: 0, Collisions: 0 SingleCollision: 0, MultipleCollision: 0 ExcessiveCollision: 0, LateCollision: 0 Filtered: 0, FCSError: 0 Number of frames received and transmitted with a length of: 64: 2388, 65to127: 142, 128to255: 11 256to511: 64, 512to1023: 10, 1024toMaxSize: 42</pre>
Port Mirroring	
Enable Port Mirror	<pre>Switch(config)# mirror en Mirror set enable ok.</pre>
Disable Port Mirror	<pre>Switch(config)# mirror disable Mirror set disable ok.</pre>
Select Source Port	<pre>Switch(config)# mirror source fa1-2 both Received and transmitted traffic rx Received traffic tx Transmitted traffic Switch(config)# mirror source fa1-2 both Mirror source fa1-2 both set ok.</pre> <p>Note: Select source port list and TX/RX/Both mode.</p>
Select Destination Port	<pre>Switch(config)# mirror destination fa6 Mirror destination 6 set ok</pre>

Port Mirroring (continued)	
Display	<pre>Switch# show mirror Mirror Status : Enabled Ingress Monitor Destination Port : fa6 Egress Monitor Destination Port : fa6 Ingress Source Ports :fa1,fa2, Egress Source Ports :fa1,fa2,</pre>
Event Log	
Display	<pre>Switch# show event-log <1>Jan 1 02:50:47 snmpd[101]: Event: Link 4 Down. <2>Jan 1 02:50:50 snmpd[101]: Event: Link 5 Up. <3>Jan 1 02:50:51 snmpd[101]: Event: Link 5 Down. <4>Jan 1 02:50:53 snmpd[101]: Event: Link 4 Up.</pre>
Topology Discovery (LLDP)	
Enable LLDP	<pre>Switch(config)# lldp holdtime Specify the holdtime of LLDP in seconds run Enable LLDP timer Set the transmission frequency of LLDP in seconds Switch(config)# lldp run LLDP is enabled!</pre>
Change LLDP timer	<pre>Switch(config)# lldp holdtime <10-255> Valid range is 10~255 Switch(config)# lldp timer <5-254> Valid range is 5~254</pre>
Ping	
Ping IP	<pre>Switch# ping 192.168.11.14 PING 192.168.11.14 (192.168.11.14): 56 data bytes 64 bytes from 192.168.11.14: icmp_seq=0 ttl=128 time=0.0 ms 64 bytes from 192.168.11.14: icmp_seq=1 ttl=128 time=0.0 ms 64 bytes from 192.168.11.14: icmp_seq=2 ttl=128 time=0.0 ms 64 bytes from 192.168.11.14: icmp_seq=3 ttl=128 time=0.0 ms 64 bytes from 192.168.11.14: icmp_seq=4 ttl=128 time=0.0 ms --- 192.168.11.14 ping statistics --- packets transmitted, 5 packets received, 0% packet loss round-trip min/avg/max = 1.3/1.3/1.4 ms</pre>

Saving to Flash (CLI)

Save Configuration allows you to save any configuration you just made to the flash. Powering off the switch without saving the configuration causes loss of the new settings.

Saving to Flash	
Save to Flash	<pre>SWITCH# write Building Configuration... [OK] Switch# copy running-config startup-config Building Configuration... [OK]</pre>

Logging Out (CLI)

The CLI connection logs out of configure terminal mode, if you do not input any command after 30 seconds.

Logging Out	
Logout	<pre>SWITCH> exit SWITCH# exit</pre>

Service (CLI)

The service command provides the ability to disable HTTP and Telnet.

Note: *There is not a web user interface page for the service command.*

Service	
Disable HTTP	<pre>Switch(config)# service http disable Switch(config)#</pre>
Enable HTTP	<pre>Switch(config)# service http enable Switch(config)#</pre>
Disable telnet	<pre>Switch(config)# service telnet disable Switch(config)#</pre>
Enable telnet	<pre>Switch(config)# service telnet enable Switch(config)#</pre>

Complete CLI List

This section provides the complete listing of RocketLinx ES8510-XTE commands with the supporting options:

- [User EXEC Mode](#)
- [Privileged EXEC Mode](#) on Page 176
- [Global Configuration Mode](#) on Page 181
- [Port Interface Configuration Mode](#) on Page 186
- [VLAN Interface Configuration Mode](#) on Page 188

User EXEC Mode

For information about accessing *User EXEC* mode, see [User EXEC Mode](#) on Page 175.

```
Switch> list
enable
exit
list
ping A.B.C.D
ping X:X::X:X
quit
show arp
show gvrp statistics [IFNAME]
show ip forwarding
show ip route
show ip route A.B.C.D
show ip route A.B.C.D/M
show ip route supernets-only
show version
telnet WORD
telnet WORD PORT
traceroute WORD
```

Privileged EXEC Mode

For information about accessing *Privileged EXEC* mode, see [Privileged EXEC Mode](#) on Page 176.

```

ModBus TCP /IP Support

This section provides the following information:

- [Modbus TCP/IP Function Codes](#) on Page 190
- [Error Checking](#) on Page 190
- [Exception Response](#) on Page 190
- [Modbus TCP Register Table](#) on Page 191
- [CLI Commands for Modbus TCP/IP](#) on Page 198

Overview

The ES8510-XTE supports Modbus TCP/IP communications through the CLI, which does not support Modbus ASCII or Modbus RTU. This functionality is not available on a web user interface page.

Modbus TCP/IP is commonly used to communicate over TCP/IP networks, connecting over Port 502. Modbus TCP/IP is used in industrial automatic communications systems and has become a standard protocol for industrial communications to transfer data to analog I/O devices or PLC systems.

Modbus TCP/IP defines a simple protocol data unit independent of the underlying data link layer. The Modbus TCP/IP packet includes three parts:

- MBAP header is used in the TCP/IP header to identify the Modbus application data unit. The MBAP header also includes a unit identifier to recognize and communicate between multiple independent Modbus end units.
- Function code
- Data payload

Modbus devices communicate using a master (client) /slave (server) architecture, only one device can initiate a transaction and the others respond to the master/client. The other devices (slave/server) respond by supplying the requested data to the master/client, or by taking the action requested in the query. The slave/server can be any peripheral device that processes information and sends the output data to the master using Modbus TCP/IP protocol.

The ES8510-XTE operates as slave/server device, while a typical master/client device is a host computer running appropriate application software, for example, a SCADA / HMI system. The ES8510-XTE can be

polled through Ethernet, thus the Modbus TCP/IP master can read or write to the Modbus registers provided by the Modbus TCP/IP.

The ES8510-XTE firmware provides Modbus TCP/IP registers that map to the ES8510-XTE operating system information which, includes the description, IP address, power status, interface status, interface information and inbound/outbound packet statistics. With the register support, you can read the information through the Modbus TCP/IP based progress/ display/ monitor applications and monitor the status of the switch easily.

Modbus TCP/IP Function Codes

Modbus TCP/IP devices use a subset of the standard Modbus TCP/IP function codes to access device-dependent information. Modbus TCP/IP function codes are defined in the following table.

Function Code	Name	Usage
01	Read Coils	Reads the state of a digital output.
02	Read Input Status	Reads the state of a digital input.
03	Read Holding Register	Reads the holding register in 16-bit register format.
04 (see note)	Read Input Registers	Reads data in 16-bit register format.
05	Write Coil	Writes data to force a digital output ON/OFF.
06	Write Single Register	Writes data in 16-bit register format.
15	Force Multiple Coils	Writes data to force multiple consecutive coils.
<p>Note: The ES8510-XTE supports Function Code 04, the Read Input Registers. With this support, the remote SCADA or other Modbus TCP/IP applications can poll the information of the device and monitor the major status of the ES8510-XTE.</p>		

Error Checking

The utilization of the error checking helps eliminate errors caused by noise in the communications link. In Modbus TCP/IP mode, messages include an error-checking field that is based on a Cyclical Redundancy Check (CRC) method. The CRC field checks the contents of the entire message. It is applied regardless of any parity check method used for the individual BYTE characters of the message. The CRC value is calculated by the transmitting device, which appends the CRC to the message. The receiving device recalculates a CRC during receipt of the message, and compares the calculated value to the actual value it received in the CRC field.

Exception Response

If an error occurs, the slave sends an exception response message to master consisting of the slave address, function code, exception response code and error check field. In an exception response, the slave sets the high-order bit (MSB) of the response function code to one.

Code	Name	Descriptions
01	Illegal Function	The message function received is not an allowable action.
02	Illegal Data Address	The address referenced in the data field is not valid.
03	Illegal Data Value	The value referenced at the addressed device location is not within range.
04	Slave Device Failure	An unrecoverable error occurred while the slave was attempting to perform the requested action.

Code	Name	Descriptions
05	Acknowledge	The slave has accepted the request and processing it, but a long duration of time is required to do so.
06	Slave Device Busy	The slave is engaged in processing a long-duration program command.
07	Negative Acknowledge	The slave cannot perform the program function received in the query.
08	Memory Parity Error	The slave attempted to read extended memory, but detected a parity error in the memory.

Modbus TCP Register Table

The ES8510-XTE v2.6 firmware provided the initial release of the Modbus TCP/IP client service support for factory automation applications. You can implement the modbus command using the command line interface in console and Telnet modes, which allows you to modify some parameters such as, idle time, number of Modbus masters, and the Modbus service port.

Note: The Modbus TCP client returns 0xFFFF to a Modbus master when pulling a reserved address.

CLI Commands for Modbus TCP/IP

The CLI commands for Modbus TCP/IP are listed in the following table.

Modbus TCP/IP Commands	
Enable	Switch(config)# modbus enable
Disable	Switch(config)# modbus disable
Set Modbus Interval Time between Request	Switch(config)# modbus idle-timeout <200-10000> Timeout value: 200-10000ms Switch(config)# modbus idle-timeout 200
Set Modbus TCP Master Communicate Session	Switch(config)# modbus master <1-20> Max Modbus TCP Master Switch(config)# modbus master 2
Set Modbus TCP Listening Port	Switch(config)# modbus port <1-65536> Port Number Switch(config)# modbus port 502

Technical Support

Control SFP Modules

Control provides a variety of SFP transceivers. These certified SFP transceivers can be identified by the RocketLinx ES8510-XTE and displayed in the web user interface. We recommend using [Control SFP transceivers](#) when configuring your RocketLinx ES8510-XTE.

Note: *Low quality SFP transceivers may result in poor network performance and may not meet claimed distance or temperature ratings.*

Control Private MIB

Control supports many standard MIBs for users to configure or monitor the switch configuration by SNMP. However, since some commands can't be found in standard MIBs, Control provides a Private MIB file. Compile the private MIB file with your SNMP tool. The private MIB can be found on the *RocketLinx Software and Documentation* CD or downloaded it from the [Control FTP site](#).

The Private MIB tree is the same as the web tree. This is easier to understand and use. If you are not familiar with a standard MIB, you can directly use the private MIB to manage /monitor the switch, without the need to learn or find where the OIDs of the commands are.

Control Support

You can use one of the following methods to contact Control.

Contact Method	Web Address or Phone Number
Support	http://www.control.com/pub/en/support
Downloads	ftp://ftp.control.com/html/ES8510_xte_main.htm
Web Site	http://www.control.com
Phone	763.957.6000
