

OTHER PROGRAMS:

I have written several other quality shareware utilities and games. They are described below, along with the price for each; price does not include disk or postage. To get all the latest versions to try out for yourself, send a formatted disk with a self addressed stamped return envelope, or send \$5 and I will supply the disk and pay postage.

GAMES:

Escape! - Escape is a simple strategy game that's mind-bogglingly similar to an old computer game called Daleks, though there's lots more goodies in this game! Control a guy as he runs around mazes trying to collect gems, weapons, mines and the occasional extra life, finding tunnels to pass through; while stupid, but persistent, robots attempt to smooch him. Simple, but addictive as all-get-out. (\$10)

ColorFall - A simple, yet very fun and addictive, new game! Blocks of 4 colors (or patterns for B&W) drop down; you position and rotate them where you want them and let 'em drop! Try to get 4 or more in a row down, across, diagonally or in a block... But that's not all! Random things happen during play to either help or hinder your progress, such as a falling weight, a bomb and other strange things! Try it! (\$10)

SideMinder! - SideMinder! is a challenging game played against the computer. Your mission is to place 3D game pieces on the board, matching as many sides as you can. The more sides you match, the higher the score! Many different options are available, such as various playing boards, tournament mode, rotating pieces, number of colors (or patterns for B&W), and level of difficulty! Try it, you won't be disappointed! (1.02 fixes a Scoring bug and adds new game boards!) I take no responsibility for time or sleep lost due to the habit forming effects of this game! (\$10)

PRODUCTIVITY:

QuickPop - QuickPop does just two things, but was designed to do them very well. This program performs functions that will benefit any Mac user and is extremely simple to set up and use. You can now define all those useless function keys on your extended keyboard (along with any other keys) to perform useful tasks!

[The first](#) is to allow you to assign "Hotkeys" to up to fifty (50) applications, documents, Apple Menu Items, control panels, FKEYs, monitor depth (colors) or speaker volume settings. When the "Hotkeys" are pressed from within most any application, the selected item will instantly launch (or change speaker or monitor settings).

[The second](#) is to allow you to have a menu pop up anywhere on the screen when you hold a key (option, command, control or shift in any combination)

and click and hold down the mouse button. From this pop-up menu you can launch your favorite documents, applications, control panels, FKEYs, Apple Menu Items, change monitor depth (colors) settings, change the speaker level or switch to any other running application.

[New Features in version 2.0:](#)

Can now use up to 50 "HotKeys". Users can now set up category folders in the QuickPop Folder for much better organization! Can now set "HotKeys" to switch between running applications (previous, next or by showing a list to choose from). Payment can now be made with VISA & MasterCard via email, FAX or standard mail. Much better documentation and a new registration application to make registering much easier.

[Some uses for QuickPop:](#)

- * Change monitor settings (for those games that require different monitor settings) and assign a single key to instantly switch to 16 colors, 256 colors or Black & white, whatever you need!
- * Have a key (or keys) to turn the speaker off or to a different level, no need to go to the Sound control panel anymore!
- * Launch your favorite application, document, control panel, FKEY or Apple menu item at the touch of a key (or keys).
- * Keep your favorite FKEYs in files rather than installing them in the System file. Place aliases of the FKEY files in the QuickPop Folder and you can launch the FKEYs with any key(s) you set up! (\$10)
