# DASY*Lab 3.5*  Data-Acquisition and Analysis

## Demostration Disk - without Interface to AD-Boards

This Demo-Software does not require any data-acquisition-hardware. Analog and digital inputs are simulated by software-generated sine and square waves with various frequencies and amplitudes. It´s only purpose is to demonstrate the great functionality of  DASY*Lab* .

### How to install the DASY*Lab* Demo

Required hardware:     AT-compatible PC with at least 8 MByte RAM,
                                      Intel 80486 or better CPU.
                                      Harddisk with 6 MByte of free disk space
                                      Mouse.

Required software:     MS-DOS or PC-DOS  version 5 or higher
                                      Microsoft Windows 3.1, Windows 3.11 or Windows 95.

Installation:                          To install the DASY*Lab* Demo under Windows 3.x or
                                      Windows 95 execute the following steps :

- insert the demo disk into your floppy drive

- start Windows and execute the setup.exe file using the capabilities of the
    program manager

- DASY*Lab* will be installed

- Windows creates the subdirectory "DLABDEMO" , which contains all files, necessary to run the demo version. If you don´t need them anymore you can easily remove the whole directory. Moreover the installation program creates a new program group

- To start DASY*Lab* just double click the DASY*Lab* ICON

DEMO-setups   Using the FILE and OPEN commands you can load the Demo-setups, which are included in this demo-package. Furthermore you can start and modify them. Every setup is shortly explained. You can read the information about the setup using the information button in the control bar.

Help          Use the integrated help system to get information about all Icons and modules.

P.S.:         Please feel free to copy this disk and give it to colleagues and friends, which might also be  interested.
