

Mono FM Sound Demodulator for TV Systems

Description

The U2861B is an alignment-free FM sound demodulator for all TV FM standards from 4.5 MHz up to 6.5 MHz (standard M, B/G, I, D/K). The circuit includes two

switchable audio inputs and volume control. With a 5-V supply voltage, the U2861B is suitable for TV, VCR and Multimedia applications.

Features

- Completely alignment-free
- PLL demodulator for FM intercarrier sound IF signals (mono)
- Complete SCART interface for audio signals
- Input for external audio signals (AM audio signal in multistandard TV sets)
- Sound IF input provided for ceramic filters
- Very few external components
- Volume control by DC voltage
- 5-V supply voltage; low-power consumption

Ordering Information

Extended Type Number	Package	Remarks
U2861B – MDP	DIP14	
U2861B – MFP	SO14	Delivery in taped form

Circuit Description

Sound IF Limiter Amplifier

The intercarrier signal coming from the sound filter is fed to a 7-stage limiter amplifier. This guarantees high input sensitivity and excellent AM suppression.

PLL – FM Demodulator

The alignment-free "Phase-Locked-Loop" (PLL) FM demodulator covers a wide frequency range of 4.5 MHz up to 6.5 MHz with excellent noise performance. Due to the fact that the voltage-to-frequency characteristic is linear, a low harmonic distortion can be achieved. The free-running frequency of the internal VCO circuit is about 5.5 MHz.

The demodulated FM signal is led via de-emphasis and buffered to Pin 12. The de-emphasis low pass filter consists of an internal 5-k Ω series resistor and an external capacitor at Pin 14. The FM muting is possible by switching Pin 5 to ground.

External Audio Input

The first audio switch (Pin 13) has inputs for the demodu-

lated FM signal and the external AF1 signal from Pin 1. For multistandard purposes, it is possible to handle internal FM and external AM audio signals. The audio output of this switch is permanently available at Pin 12 (e. g. for SCART interface).

SCART – Audio Processing

The second audio switch (Pin 11) has inputs for the audio signal from switch 1 and the external AF2 signal at Pin 10. The switched AF signal is fed to output Pin 8. The output voltage can be controlled by a DC voltage at Pin 9.

SCART Control Switch

The common selector switch is controlled by a DC voltage at Pin 11. In "internal mode" the demodulated signal is selected. For the selection of the audio signal supplied via SCART socket, the "external mode" has to be switched on.

Internal Voltage Stabilizer

The internal bandgap reference ensures constant performance independent of supply voltage and temperature.

Pin Description

Pin	Symbol	Function
1	$v_{i,AF1}$	Audio input 1 (e.g. AM signal)
2	C_{dec}	Decoupling capacitor
3	$v_{i,SIF}$	FM sound IF input
4	GND	Ground
5	V_{mute}	FM mute switch
6	C_{ref}	Internal reference voltage
7	V_s	Supply voltage
8	$v_{o,AF2}$	Switched audio output 2
9	V_{vol}	Volume control
10	$v_{i,AF2}$	Audio input 2 (e.g. from SCART)
11	V_{sw2}	Audio switch 2
12	$v_{o,AF1}$	Switched audio output 1
13	V_{sw1}	Audio switch 1
14	C_{dem}	De-emphasis and mute switch

Control voltage for "mute on"	V_{mute}	AF "off"	0		1.5	V

Notes:

5. This parameter is given as an application information and is not tested during production.
6. Without control voltage at Pin 13, the internal FM demodulation mode is automatically switched on.
7. Without control voltage at Pin 11, the internal FM or external audio signal is automatically switched on.
With $V_{11} < 1.5$ or $V_{11} > 4.0 \text{ V}$ SCART input Pin 10 is selected.
8. Without control voltage at Pin 5, the mute function is not active.

Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

TEMIC TELEFUNKEN microelectronic GmbH semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

TEMIC can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

We reserve the right to make changes to improve technical design and may do so without further notice.

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
