1.1 Main

MClock 1.1 - released 950420
©1995 Niklas Mattsson

Introduction

Legal stuff

Usage

History

1.2 Introduction

MClock is a small BBS Cli-door to show the user date and time. It also shows the city/board etc the user is logged into and it may display a small note. I wrote it much just to write a cli-door but as it developed it's rather usefull and I hope you will like it!

1.3 Legal stuff

This is NetMailWare - meaning you may spread and copy it as long as you do not charge any more then reasonable copycost. If you use it YOU must write me a netmail at mattsson@academy.bastad.se or FIDO 2:203/807 and tell me that you are using it. I will then notify you about every update I release.

I can not be made responsible for any damage caused by this program. Use at your own risk!

1.4 Usage

The program should be started as a CLI door and this is the template: MClock [LOCATION] -[MODE] *[CHAR] /[TEXT] where LOCATION is the only one that GOT to be there. LOCATION is, as you might understand, where the user is logged in. MODE can be one of: o - original mode d - digital mode t - thin digital mode CHAR is the character to use in the numbers (default=#) and TEXT is a text that should be displayed as a little note. Shouldn't be longer than a couple of lines since the screen will otherwise flow over.

Here are a couple of example usages:

"MClock Halmstad -d *- /dh0:text", will display the location as Halmstad, the numbers with digital font and using the letter "-". It will also display dh0:text as a note.

"MClock Sweden -t", will display the location as Sweden, the numbers will be digital font and using the letter "#".

1.5 History

Version history only from version 1.02 and up...

1.1 950420 Note-function. Nicer doc! Rewritten parameter system.

1.02 950420 New font - the thindigital. Small bugfixes.
