1.3 Introduction

Introduction
~~~~~

PathID is a small utility to ensure all of the file, message, and system directories have been created. If a missing directory is encountered PathID will prompt to create the missing directory if desired. This is an excellent utility for first time setups, and when creating new file or message areas.

## 1.4 Features

Features  
~~~~~

- recursively creates all directories
- checks all file, message, and system paths
- configurable operation
- ability to display detailed report of directories scanned

1.5 Installation

Installation
~~~~~

Simply copy PathID to your MEBBSNet:c/ directory or where desired.

Example:

```
1> Copy PathID MEBBSNet:c
```

## 1.6 Usage

Usage  
~~~~~

PathID is ONLY usable from the command line. There are several options listed below with their descriptions.

Options:

```
SYSTEM/S,MSGAREAS/S,FILEAREAS/S,ALL/S,MKDIRS/S,ASK/S,VERBOSE/S,QUIET/S
```

ALL - Specifies that ALL paths are to be scanned
SYSTEM - Specifies that the system paths are to be scanned.
MSGAREAS - Specifies that the message area paths are to be scanned.
FILEAREAS - Specifies that the file area paths are to be scanned.
MKDIRS - Specifies that missing directories are to be created. (RECURSIVELY)
ASK - Specifies that directories are to be confirmed before creation.
VERBOSE - Displays items being checked.
QUIET - Specifies that the "actions" are NOT to be displayed.

Example:

```
1> PathID ALL MKDIRS ASK
```

This example would check for missing directories and ask if they should be created if they are not found.

1.7 Comments and Suggestions

Comments and Bug Reports:
~~~~~

Call my BBS:

```
The Amiga Enterprise    717-223-8269    300-28800 Bps    24 Hours
```

Or send mail to:

```
JGouger@psu.edu      - Internet Address *  
gouger@cse.psu.edu  - Internet Address (Talk Cmd Supported) *  
Jason Gouger        - Fidonet 1:268/114
```

Jason Gouger - Proper Mebbs Echo

\* Internet addresses are the fastest method of communication

## 1.8 Other Doors by Jason Gouger

Other Doors by Me:

~~~~~

MQwkID [V1.00]

MQwkID is an external door for the MEBBSNet Profession BBS software that creates standard QWKMail packets. MQwkID has many features including autopacket naming, multiple message area downloads, hidden mode operation, and much more. MQwkID also serves as a reply packet tosser directly through the door or from the command line.

UserID [V2.01]

UserID keeps track of the past number of callers that YOU define. Also the output is 100% configurable. There are many text sequences (~u_) which display a callers actions while on-line. They include messages posted, download, and upload information. Every field can be configured to a specific length and can be left or right justified. UserID will create an environmental variable called User_X (X being the line number) which will hold the on-line user's name. This environmental variable can be used for shell games and other applications where the username is not readily available, see the included examples. The environmental variable is also used by the TimeOn door. The TimeOn door displays the total on-line time.

CDRomID [V1.02]

Allows users to search CD-Rom Index file(s) for a string, and of course it has the ability to the allow direct downloading of files from the CD-Rom. It also includes the ability to make file(s) FREE for download, or have them charged against the users account. It now has Multiple CD-Rom support, and a temporary download directory option has been added.
