EXPLANATION OF FILES:

~~~~~

This documentation assumes you are using the Elysium Dos Driver. You must have the Script Bit SET on the H&S.SC file for this to work. You can alter these scripts as necessary. I use a derivation of these scripts to execute \*ALL\* of my shell games.

Call the file with the .SH, in this case call H&S.SH, from the menu you wish execute the door. This file should be located in your DosDrivers: assignment. The .SCH file should also be located in the DosDrivers: assignment.

These scripts do checking to make sure the proper username is passed to the door. Even if two or more users attempt to access the same door, built in error correction should make sure the proper name is passed.

The following example will start the Hack and Slash Door w/ the supplied scripts. Assuming the Hack and Slash door is located in the DOORS:H&S assignment.

Start ----->

Option 'A':

```
Function MultiRundoor DOORS:ELYSIUM/H&S.SH
end
```

<----- End

---
