1.3 disc

This distribution is Copyright (c) 1995
MNT

This program is FREeware. You may freely use and distribute this program ↔
if you meet the following conditions:

-No modifications are made into the program, this guide and their icons

and all the files are spread together. (Archiving is allowed.)
-No money but nominal copying fees is charged for its distribution.

THIS PROGRAM IS PROVIDED "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED. THE AUTHOR WILL NOT BE LIABLE FOR ANY DAMAGES, DIRECT, INDIRECT, INCIDENTAL OR CONSEQUENTIAL, RESULTING FROM THE USE OF THE PROGRAM. THE ENTIRE RISK AS TO THE USE OF THIS PROGRAM IS ASSUMED BY THE USER.

If you need an

offsetcode

you will have to include a disk with the appropriate tracker, you want the code for. I will then return a letter with an perfect fitting code

:)

back to you.

BUT ONLY if you have included enough money for the stamps of the returnletter. This should be 4-5 DM (German Marks).

PT_Prefs was written using AMOS_PRO and the AMIPS-Extension by 'The Software Society'.

to Main

1.4 info

This little tool lets to change the picture, pointer and font of most Protrackers, Soundtrackers, Noisetrackers, Startrekkers, ...

It converts the stuff that your trackers uses to standart IFF pictures, which can then be edited by your favourite painting program. If the pictures fits your personal taste, you can put them back into the tracker. The next time you start that program, it will use that stuff

:)

that you have patched in.

Kick 2.04 or newer and Reqtools.library (© Nico François) needed!

Quick introduction

1.5 quick

This is a step-by-step quick course in how to use PT_Prefs.

1. Make a copy of your tracker disk, if you own no Harddisk, or just duplicate your tracker executable. Then set the "Replace old" cycle gadget in the PT_Prefs

main window
to "Don't!".

-OR-

Set the "Replace old" cyclegadget in the PT_Prefs
main window
to "as .bak". Doing so, the tracker executeable will always be ←
copied to
and backup-file before it will be modified that is called like the normal
executeable, but with appended letters ".bak".

2. Select the "Settings" button.

3. Fill the integergadgets with
offsetcodes
that fit
to the tracker version you use. (The version has to be EXACTLY
the same, or your tracker may crash after the patch!)

4. Click on the fileselectorbutton (right from the pt path stringgadget)
and select the tracker executeable, you want to modify.
Or enter the name directly in the stringgadget, cause in most cases
the tracker can be found in "st-00:pt4.50" or something.

5. If you want to use these settings permanently click on SAVE.
(they will be saved into envarc.) After that click on USE.

6. Click on SCREEN, POINTER and/or FONT in the
RIP-section
(left!).

The screen/pointer/font of your tracker will be ripped out and
be converted to a normal IFF picture. After that a filerequester asks
you for the filename of the picture(s).

7. Modify the picture you saved before with your favourite paint program,
and save it.

8. Click on SCREEN, POINTER and/or FONT in the
PLACE-section
(right!).

A filerequester will ask you for the picture you've modified.
The picture will be reconverted to binary and your tracker will be
directly patched with it.

9. Start the tracker you've selected.

- If you face a guru meditation or you only see weird stuff,
you've used the wrong parameters or your tracker is crunched.
(At this point, you will damn yourself if you've made no copy!)
- If NOT you will face a totally new looking tracker. (Cowabunga!)

If your code was wrong and a code for your tracker is not in the list,
look in the

disclaimer
-section how to get your personal code.
