## Chapter 1

# Render\_Toaster

### 1.1 Render: Toaster

The Toaster render module is used to transfer images directly from ImageFX to one of the Video Toaster framebuffers.

Bank: Framestore Bank to transfer to (DV1 or DV2).

Program Output: Determines what kind of Switcher action to take after transferring the image. "None" does nothing, "Take" performs a take switch, and "Auto" performs the current transition effect.

Transfer: Transfer image to the Video Toaster.

TAKE: Direct the Switcher to do a Take transition.

AUTO: Direct the Switcher to do an Auto transition.
