Chapter 1

SwazBlanker/Plazma

1.1 Plazma (08.12.94)

```

                                SWAZBLANKER : Plazma
=====

(C) 1992,93,94 David Swasbrook,
    All Rights Reserved.

                                Introduction
                                What it actually does

                                Interface
                                Configuration preferences

                                History
                                Bug fixes and updates
```

1.2 What it actually does...

```

Introduction
=====

This blanker draws a colorful plazma on the screen.
```

1.3 Configuration preferences...

```

Interface
=====

    Save - save and use the current settings.
```

Use - use the current settings.

Test - test the blanker under the current settings

Cancel - cancel all changes.

Color Gradient - this sets how the color is to be spread across the screen. Setting to low values will reduce the differences between colors, high values increase the differences giving more color bands on screen.
Default: 100.

Display Mode - the screen mode to use. If the preferred screen cannot be opened then the default screen mode will be tried, if this fails then the minimum screen mode required for this blanker will be tried, if that fails then the blanker will quit and let SwazBlanker choose an alternative blank method.
Default: High-Resolution Laced, 16 Colors.

1.4 Bug fixes and updates...

History
=====

None at the moment.
