```

1.2 Introduction

```
                                        Introduction
        _____
```

HTML-TEXT comes with ABSOLUTELY NO
          WARRANTY
                    This program is free software; you can redistribute it ↔
                        under
certain
          ~conditions~
          .

About...
          HTML-TEXT is a program that will take a
      .html file and strip all marks from the file, it
      will then write a new file that will contain the
      plain text.

Features...
          oHTML-TEXT uses a graphic user interface (GUI), so it
           is easy to use.
          oHTML-TEXT features the use of locale.library and has
           the following catalogs included:

                    English
                    Svenska by Roger Andersson
                    Deutsch by

          oHTML-TEXT can keep href's in the text output.
          oHTML-TEXT can write an icon to the out file.

          Check the
           reasons~to~register
           , for more features.

System Requirements...

      Any Amiga with OS 2.x or above

1.3 Installing

                        Installing

      _____

          The installation of this software is very simple.
      The program consist of one file and can be put in any directory
      of your choice.

          As an example, if you wanted the program in your SYS:c/
      directory you would do the following:

                    1. Unarc the file HTML-TEXT.lha
                    2. copy the file HTML-TEXT to SYS:c/

          There are no config files to track, so the program can

really be placed anywhere that you like.

1.4 Usage

                                       Usage

_____

            The operation of HTML-TEXT is very straight forward, and
        any seasoned Amiga User should be capable of using the software
        right away.

File Options...

        IN: Click on this button and a load requester will open.
            Select the file you want to convert and click OK.
            You may also type in, the string gadget, the file to
            be converted.

       OUT: Click on this button and a save requester will open.
            Enter the file name you want as the converted file.
            You may also type in, the string gadget, the file to
            be saved to.

Save Options...

      HREF: This is a checkmark gadget, and is used to keep those HREF's
            from an .html file in your converted text.
            As an example, lets say a file had this line of text+marks:

                You can reach him at <A HREF = "mailto:dloeser@iglou.com">
                dloeser@iglou.com</A>

            In the saved file you would see:

                You can reach him at [HREF = "mailto:dloeser@iglou.com"]
                dloeser@iglou.com

            The HREF is in side of the '[' and ']'
            If the gadget is not selected the above example would look like
            this, in your save file:

                You can reach him at dloeser@iglou.com

      ICON: This gadget allows the save file to be saved with an icon.
            The icon has its default tool set to SYS:utilities/MultiView
             Convert...

            After selecting an in file and a out file you can click CONVERT
            and the .html file will be converted to text. There is a
progress
            bar there to let you know the status.

?...
            This is the about gadget... you don,t have to read it.

Quit...

        If your finished...

1.5 Distribution

                                        Distribution
_____

      This program is NOT PUBLIC DOMAIN or PD. It is SHAREWARE and if you
      use this program please fill out the
              REGISTRATION
               for an enhanced
      version of the program. The UNREGISTERED version may be distributed
      if the guidelines below are followed.

      TO DISTRIBUTE HTML-TEXT THESE FILES MUST BE IN THE DISTRIBUTION:

                    HTML-TEXT   (THE PROGRAM)
                    HTML-TEXT.GUIDE   (WHAT YOUR READING)

      NO FILES WILL BE ALTERED!!!!

1.6 Registering

                                        Registering
_____

Why bother...

      Here are a list of reasons to register.

              oPrice only $5.00 US.
              oFree updates.

IN THE REGISTERED VERSION

      oNo annoying requester when quiting the program.
      oMulti Selection of files to convert.

How to register...
