PT_Prefs.guide $VER 1.16 (25.3.1996)

1.1   Title Page

```
            Protracker Preferences v1.12... by
         MNT
          1996
   Codes: 16 (25.3.1996)

           Disclaimer
             No Warranties

           What is it ?
             Read all about it!

           Quick introduction
             How to do-quick!

           Offset codes
             Which one?

           Main Window
             Have a look...

    PT_Prefs is *FREEWARE* and may NOT be sold.
```

1.2   Currently supported offsetcodes

```
        Note: The 'cursor' (the red box of the editfield in the middle of
   the patterns) is normally 92 bytes further from the pointer.
   Proceed with the Cursor just as with the Pointer,but add
   (see above) 92 to the pointer-value.
```

```
Abbreviations:   S-Screen  P-Pointer  F-Font
```

```
Protracker 1.1a:    S 123100
        P 146064
        F 169431

Protracker 1.1b:    S 123368
        P 146332

1.3 Disclaimer

                        This software has been tested on several amigas without any
problems.But NO software can be perfect (murphy...),so you use
it for your own risk.I will take no resposebility for any damage
caused by the use of this program.(eg. killed trackers,crashed
amigas...)

This software is Freeware.You can do anything with it,
exept altering any of the files.It may not be sold.

DAS GILT IM BESONDEREN FÜR: FA.MALLANDER!!!

PT_Prefs was written with help of the AMIPS-Extension by
'The Software Society' which has stopped the support of
the amiga.(No loss for the amiga.)

                        to Main

1.4 Thats it!

                        This little tool lets you replace the picture,pointer and font of
most Protrackers,Soundtrackers,Noisetrackers,Startrekkers with
your own ones.

It converts the stuff that your trackers uses to standart IFF
pictures,which can be edited by your favourite painting program.
If the pictures fit your personal taste,you can put them back
into the tracker.The next time you start that program,it will
(hopefully) use that stuff that has been patched in.

                        Back to main menu

                        Quick introduction

1.5 Quick course

                    This is a step-by-step quick course in how to use PT_Prefs.

1.Make a copy of your tracker disk,if you own no Harddisk,or just
  duplicate your tracker executable.Then set the "Replace old"
  cyclegadget in the PT_Prefs
                main window
                 to "Don't!".

  -OR-

  Set the "Replace old" cyclegadget ind the PT_Prefs
                main window
                  to "as .bak".Doing so,the tracker executeable will always be ←
                    copied to
  an backup-file before it will be modified that is called like the normal
  executeable,but with appended letters ".bak".

2.Select the "Settings" button.

3.Fill the integergadgets with
                offsetcodes
                 that fit
  to the tracker version you use. (The version has to be EXACTLY
  the same,our your tracker may crash/act strange after the patch!)

4.Click on the fileselectorbutton (right from the pt path stringgadget)
  and select the tracker executeable,you want to modify.
  Or enter the name directly in the stringgadget,cause in most cases
  the tracker can be found in "st-00:pt4.50" or something.

5.If you want to use these settings permanently click on SAVE.
  (they will be saved into envarc.) After that click on USE.

6.Click on SCREEN,POINTER and/or FONT in the
                RIP-section
                 (left!).
  The screen/pointer/font of your tracker will be ripped out and
  be converted to a normal IFF picture.After that a filerequester asks
  you for the filename of the picture(s).

7.Modify the pictures you saved before with your favourite paint program,
  and save them.

8.Click on SCREEN,POINTER and/or FONT in the
                PLACE-section
                 (right!).
  A filereqester will ask you for the picture you've modified.
  The picture will be reconverted to binary and directly patched into
  your tracker executable.

9.Start the tracker you've selected.
 -If you face a guru meditation or you only see weird stuff,
  you've used the wrong parameters or your tracker is crunched.
  (At this point,you will damn yourself if you've made no copy!)

```
    -If NOT you will face an totally new looking tracker. (Cowabunga!)

                    Main Menu
```
