1.2 Introduction

Ever wanted to convert Amigaguide-files to the HTML format?
Ok, you could use...

-Guide2html: Needs some work, crashes for unknown reasons
-GuideToHtml: Very slow, because its written in Perl.
-Guidehtml: Only knows @NODE @ENDNODE and @{ link }

HTMLit! has the following advantages:

- It knows nearly all V40-Amigaguide-commands.
- Converts even Bold and Italic-Styles
- Can insert Text or Image buttons for previous,next,index and contents-nodes.
- It is fast
- and has a nice,fontsensitiv gui.
- Can use <! >-HTML-Remarks for \$VER and so on...

1.3 Requirements

Needed for operation:

- Minimum Kick 2.x
- Lots of free memory,if you convert very big guides
- reqtools.library

(Anything a normal Amiga-user normally has)
