Calepin

1.1 Documentation of Calepin

```
                    Calepin V1.3 12-11-1996) (c) 95/96 Mathias 'HCL' Delantes
           ----------------------------------------------------------
```

```
              About Calepin

              Distribution

              Install

              How its works

              History

              Thanks & Contact the author

              About MUI
             !! Note: In order to use your old data of Calepin use
            ConvertCalepin
             !!
        And that, before using Calepin V1.3 with your old data files
        Data created before V1.2 MUST be converted
```

1.2 About Calepin

```
              Calepin is a little tool to keep address, telephone number, E- ←
                   mail
etc.. of your friends. I saw many tools like this,but no one was the
one I was waiting for, so I decided to code one myself.
Calepin is not very powerful, it will only do its job and not more.

You will need OS 2.0 (I think)  and the MUI package installed to run
Calepin. Some word about  MUI: MUI is a library (a powerful library)
to draw GUI.This library is fantastic for the programmer and for the
```

```
users...so I use it ;-) See
                mui
                Sorry for my (very) bad english,and the not really good  ←
                   explications
I hope you understand the documentation, and like the tool (?)
```

1.3   Distribution

```
                Calepin is FreeWare and ...
"is © Copyright 1995/96 Mathias Delantes, all Rights Reserved.
It may be freely distributed, provided that no charge is made, other
than a reasonable fee for media/copying.
It may not be uploaded to BBSs which claim copyright on any uploaded
material.It may not be distributed on coverdisks without the written
permission of the author.
When distributing Calepin, distribute ALL files together, preferably
as the original archives you received (if you did). None of the files
may be modified, and  none may be removedfrom the archives.If you add
new icons to the package please send me copies of icons so that I can
add them to the next release.
As always,Fred Fish has permission to include Calepin on his AmigaLib
CDs/floppies...

Calepin uses the
                 MUI.library
                MUI is © Copyright 1994,95,96 Stefan Stuntz."
```

1.4   Install

```
  Calepin uses the MUI.library, so you need it ! It is not provided with
the package.

There are two versions of Calepin: Calepin and Calepin020 (for 68020 :-)

The best way is to use the installer script, but if it's easy to install
with the CLI if you like...
```

1.5   Main Window & Menus

```
                Two things will be explained here: The Main Window and The Menus

The Main Window:

  There are two windows: one to show the names (List) and another one to
add, modify or delete informations (Edition).

Cycle "List":
```

If you double click a name, or select it and click the button "Ok", you
will see the others informations about this person (adress, telephone,
E-mail ...). Then if you double click in the window or click Ok you will
be back to the list.

Cycle "Edition":

In this part you could add, modify, or delete informations about someone
You have a cycle to select " Add Someone ","Change SomeThings" or "Erase
SomeBody !!!"

  Cycle "Add Someone":

  If you want to Add Someone, you will just have to complete the strings
  and then press "Ok, I agree". This new person will be add to the list,
  and save to calepin.data when you quit.

  Cycle "Change Something":

  If you want to Change Something you have to select someone in the list
  (Window List) and then select in the window Edition, the cycle "Change
  Something"; Easy!
  Now you can modify what you want and click "Ok, I agree" to save these
  changes. They will be save in calepin.data when you exit.

  Cycle "Erase SomeBody !!!":
  In order to Delete Someone,you must select someone in the list (Window
  List) and then select in the window Edition the cycle "Delete Someone"
  Now the name,surname and the rest of the information will appear,click
  "Ok, I agree" and the information will be deleted.It will be record in
  calepin.data when you exit.

!! All the changes will be save, when you exit, in calepin.data and not
   before (they will appear but not recorded) !!

If you exit using the Close button of the window it 'll save the change.
If you exit using the menu "Don't save & Quit" it 'll..yep you know ;-)

The Menus:

Well there are three menus:

Project:

  Load: you can select which data file you want
                        default is "progdir:calepin.data"
  Save As: you select the name of file of data
  About: nothing to say
  Don't Save and Quit: no more ;-)
  Save and Quit: same thing if you quit using the close gadget

Sort:

```
  by Name   : the list will be sorted by the name
  by SurName: the same but by the surname

Settings:

  Menu       : you will be able to define your own
               Menus
                 MUI       : call the MUI's preference tool

If you want to create another data file:
  Load a new file and give it the name you want then you will
  have a new file empty ready for news entries.

NB: if you "Load" or "Save As" a data file then it will be the default file
    for all the others operations, I mean that if you "Save and Quit" after
    having "Save As" as hd1:calepin/mydata (eg:) then "Save and Quit"  will
    save the file in hd1:calepin/mydata
```

1.6   config of your own menus

```
You can create you ownr menu (up to 4) and call a tool, parsing parametres
that are the "definition" of a person.

So here is a simple example: i will call the mailer elm
1. Give a name to the menu
2. In the second line, you have to put the action to be realised with
   the parameter(s). So here it is : elm %5 (%5 is for email)
3. Now, save it, and you will have a new menu Misc and with a sub-menu
   that have the name you had given.

Parameters must be written like that:
%1 is for  name
%2 is for  surname
%3 is for  telephone
%4 is for  fax
%5 is for  email
%6 is for  address1
%7 is for  address2
%8 is for  adress3
%9 is for  address4
%0 is for  note

eg: my_program %1 %2  means my_program <name> <surname>

I hope that i am enough clear (?), but it is very simple. Moreover
you have two menus in this part in order to help you.
```

1.7 Thanks & Contact

```
I want to thanks the fallowing persons:

Stefan Stuntz for MUI for his powerful library
Eric Totel for MUIBuilder (very helpfull)
Andreas Etzrodt for the dutsch locale file and his comments
Luc Dumaine for his general help
The beta testers of my tools
Fly for have look for the spelling mistake ( not to much man ! ) &
his commentS on this work!
Frank for many things :-)
My friends in the Amiga Community.
And not the least, Aminet.
You can join me for bug report, wish, or anything at:
Delantes Mathias
14, rue Rene Leynaud
69001 Lyon
France

or by e-mail: calepin@carbone.dedal.fr.net         (New E-Mail !!)

If you like this program or you have any suggest send me a mail !

If you want to realise a documentation, a locale file in your own
language, you have the "tool kit" in the archive.
Add your name in the "about" if you translate a .cd
If you dislike some english word in the doc, or Calepin feel free
to ask me to change that.
```

1.8 History

```
V1.0  (05-12-95) First Release.

V1.01 (10-12-95) Find an important bug when you select the sort by
                 Surname.

V1.1  (01-03-96) Add the possibility to  "Load", "save as"  so you
                 can now have different data file.

V1.2  (24-05-96) Add a new line for "address" and a line for "fax"
                 fix a bug with "Save As"
                 "Load" is now called "Open"
                 fix a bug in the shortcuts

V1.3  (12-11-96) Use the Locale catalog
                 You can define you own menus, to call a tool with
                 parameter(s) (up to 4).

*** Important Note About old Data ***

            If you use Calepin V1.2 you don't need to convert
            your data.
```

```
BUT if you use a version of Calepin that is infer
iour at 1.2 then you MUST convert your data. It's
simple: you have to type in a CLI:
        ConvertCalepin <name>
        where <name> is the name of the data file

You can know the version of your previous version
of Calepin using the menu "About"
ConvertCalepin is in the package.
Make a copy of your data before!!
```

1.9   MUI

```
              This application uses

          MUI - MagicUserInterface

      (c) Copyright 1993/94 by Stefan Stuntz
```

MUI is a system to generate and maintain graphical user interfaces. With
the aid of a preferences program, the user of an application has the
ability to customize the outfit according to his personal taste.

MUI is distributed as shareware. To obtain a complete package containing
lots of examples and more information about registration please look for
a file called "muiXXusr.lha" (XX means the latest version number) on
your local bulletin boards or on public domain disks.

```
      If you want to register directly, feel free to send

            DM 30.-  or  US$ 20.-

                  to

              Stefan Stuntz
         Eduard-Spranger-Straße 7
            80935 München
               GERMANY
```
