

# Window Manager

257522\_PixelRule.tiff ↵

Fig.9.tiff ↵

The Window Manager contains a list of all loaded images. This panel is useful if you want to apply an action to more than one image at a time. Just select the desired images in the Window Manager, select the desired action and click on Apply.

You can add images to the Window Manager without loading them by just dragging them from the Workspace into the panel. Images that are not loaded are shown in red print or bold on monochrome machines.

When you apply an action to images that are not loaded, the ;Queue Scheduler.rtf; ↵ **Queue Scheduler** will appear.
