PasteUp Features

EASY TO USE

§ As easy to use as a drawing program or a word processor. Designed specifically for NEXTSTEP. Full WYSIWYG display, including headers, footers, and graphics.

PARAGRAPH CONTROL

§ Text can be aligned left, right, center, and justified with indents (margins) for left, right, & first line. Full PostScript® font control. Vertical space before, between & after paragraphs can be set.

§ Font Attributes: bold, italic, superscript, subscript, single & double underline, word underline, redline, strikeout.

§ Left, right, center, and decimal tabs.

§ Automatic or fixed line spacing.

§ Bullet Style creates hanging bullets without tabs; bullets can be in any font and any color and moved relative to the paragraphs.

§ View and insertion of all available characters; date/time text and updating markers.

§ Copy Attributes transfers object attributes like word spacing, leading, font and color with copying and pasting.

TYPOGRAPHIC CONTROL

§ Hanging punctuation off left & right margins. Automatic ligature substitution of ﬁ for ‘f-i’, ﬂ for ‘f-l’. Automatic pairwise kerning. Smart Quotes substitution of “open & closed” quotes.

§ Case change operations (lower, UPPER, Capitalize).

§ Precise positive and negative tracking, leading and word spacing.

PARAGRAPH STYLES

§ Save frequently-used paragraph formats as named styles. Apply the format to paragraphs by drag & drop. Changes to a style are reflected across the document automatically.

TEXT COLUMNS

§ Auto Flow columns appear automatically on pages (lefthand, righthand, or all) and link from page to page. Manual columns can be drawn and manually linked in any configuration.

§ Column Layout Panel creates sets of linked columns. Specify number of columns, margins, gutters, position & size. Add or delete columns with automatic reflow of text. Manual column (page) break markers.

DRAWING TOOLS

§ Draw lines, rectangles, polygons and ovals with built-in tools. Fill shapes with any color from the Colors panel. Lines and outlines of any weight and color. Create dash patterns for outlined geometric shapes or line segments.

§ Apply built-in or custom arrowheads and terminators to a line.

§ Align and distribute objects, both horizontally & vertically. Group and lock selected objects. Create snap-to guidelines or snap to the ruler tick marks.

§ Copy Attribute transfers particular object attributes height, width, location and color by copying and pasting.

GRAPHICS PROCESSING

§ Automatic text runaround or overlay of Page-based graphics at fixed location. Fill and Frame colors drag-and-drop from standard color panel.

§ Graphic layering and locking of graphics and text.

§ Drag & drop graphics into text flows to embed special symbols or equations.

§ Crop any text or native or imported graphic object to a geometric shape drawn with drawing tools such as polygons, ovals, rectangles. Automatic cropping tool allows drag & drop graphics inside crop rectangle.

§ Perform scale, rotate & skew operations visually, by clicking and dragging or scale and rotate(to any angle) numerically.

IMPORT ART

§ Drag & drop TIFF, EPS, FAX, multi-page PS and Equation Builder files. Graphic Links panel displays information about graphics files that are linked by reference. Image Filter service support.

§ Object Link (Paste-and-Link) support for live updating

§ Place drop shadows behind text, graphics, or imported files, with full control over shadow color and offset. Unique feature sets correct drop shadows from imported EPS files.

GRAPHIC STYLES

§ Save frequently-used line, fill, dash & arrowhead combinations as named styles.

SPELL CHECK & HYPHENATION

§ Multiple languages per document are supported.

MASTER LAYERS

§ Graphic objects or text columns can be placed on the Master Layer. Specify where the objects will appear in the document: on even pages, odd pages or all pages. Useful for repeating elements, left and right pages, & page auto-numbering.

PRINTER SUPPORT

§ Full support for any NEXTSTEP-supported PostScript printer.

FULL COLOR SUPPORT

§ Generate four-color separations directly, including on-screen preview, for PostScript imagesetters.

§ Specify screen angles, bleed, crop marks, registration marks, and emulsion side.

§ Overprint support for native and imported graphics.

USER INTERFACE

§ Text selection from mouse and keyboard, forward delete and transpose operations. Full support for Intel/HP cursor and function keys. Function keys can be mapped by the user. Emacs keybindings.

§ The On-line Hypertext Help is wonderful.

DOCUMENT HANDLING

§ Standard file handling: new, open, save, save as, save to, revert to saved, and close.

§ Template document operations load, save, & new from template; default “New Document” preference.

§ Imports ASCII, RTFD, WriteNow (for Motorola only), WordPerfect, TIFF, and EPS files.

§ Multiple views of a document update simultaneously.

§ Page Navigator panel shows thumbnail pages of the document. Collapse (hide) ranges of pages for viewing or dragging objects between nonadjacent pages. Print all even or odd pages, or select specific pages for printing.

§ Automatic page numbering, Roman/Arabic.

§ Units: points, picas, inches and metric.

§ Specify custom document sizes with the Page Layout panel.

§ Zoom documents from 10% to 1600%

§ Headers/Footers: single or odd/even pages, option to exclude first page.

PasteUp™

Page Layout for NEXTSTEP

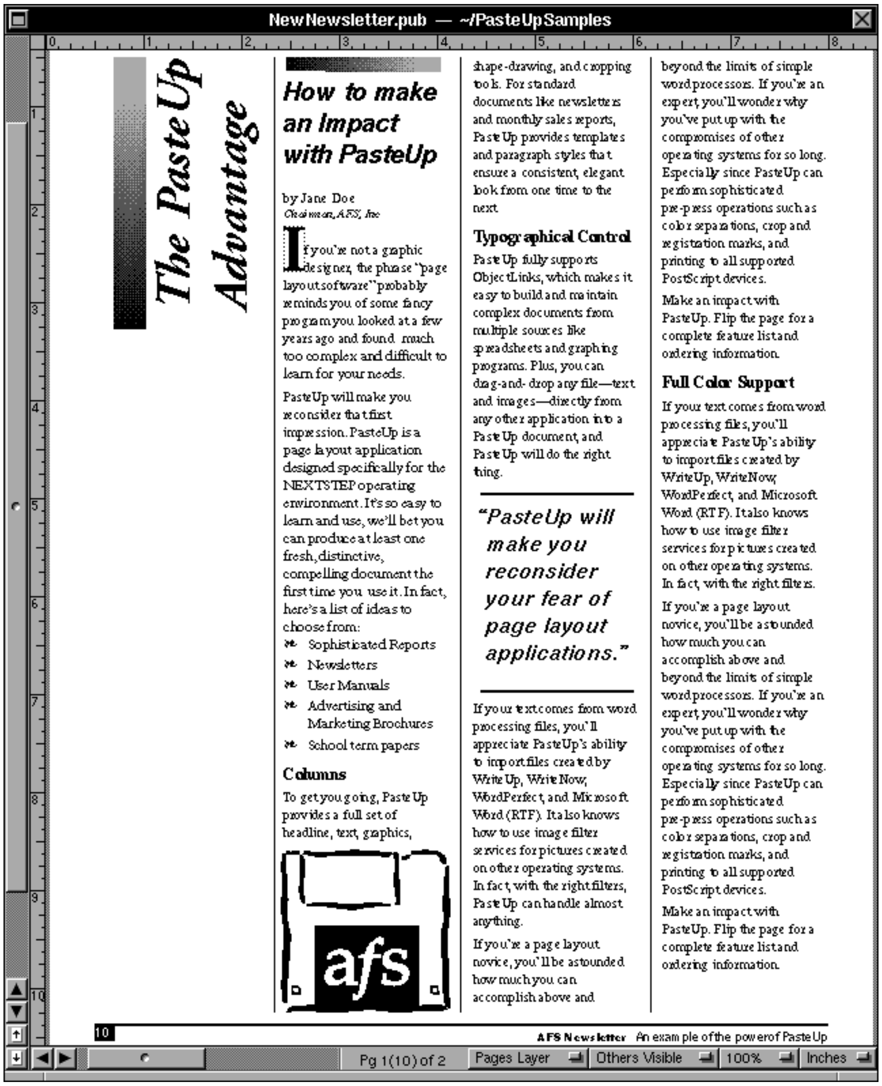
If you're not a graphic designer, the phrase "page layout software" probably reminds you of some fancy program you looked at a while back and found much too complex and difficult to learn for your needs.

PasteUp will make you reconsider that first impression. PasteUp is a page layout application designed specifically for the NEXTSTEP operating environment. It's so easy to learn and use, we'll bet you can produce at least one fresh, distinctive, compelling document the first time you use it. In fact, here's a list of ideas to choose from:

- Sophisticated Reports
- Newsletters
- User Manuals
- Advertising and Marketing Brochures
- School term papers
- A wild letter to your mom

To get you going, PasteUp provides a full set of headline, text, graphics, shape-drawing, and cropping tools. For standard documents like newsletters and monthly sales reports, PasteUp provides templates and paragraph styles that ensure a consistent, elegant look from one use to the next.

PasteUp fully supports ObjectLinks, which make it easy to build and maintain complex documents from multiple sources like spreadsheets and graphing programs. Plus, you can drag-and-drop any file—text and images—directly from any other application into a PasteUp document, and PasteUp will do the right thing.



The PasteUp Advantage

How to make an Impact with PasteUp

by Jane Doe

If you're not a graphic designer, the phrase "page layout software" probably reminds you of some fancy program you looked at a few years ago and found much too complex and difficult to learn for your needs.

PasteUp will make you reconsider that first impression. PasteUp is a page layout application designed specifically for the NEXTSTEP operating environment. It's so easy to learn and use, we'll bet you can produce at least one fresh, distinctive, compelling document the first time you use it. In fact, here's a list of ideas to choose from:

- Sophisticated Reports
- Newsletters
- User Manuals
- Advertising and Marketing Brochures
- School term papers

Columns

To get you going, PasteUp provides a full set of headline, text, graphics, shape-drawing, and cropping tools. For standard documents like newsletters and monthly sales reports, PasteUp provides templates and paragraph styles that ensure a consistent, elegant look from one time to the next.

Typographical Control

PasteUp fully supports ObjectLinks, which makes it easy to build and maintain complex documents from multiple sources like spreadsheets and graphing programs. Plus, you can drag-and-drop any file—text and images—directly from any other application into a PasteUp document, and PasteUp will do the right thing.

> *"PasteUp will make you reconsider your fear of page layout applications."*

If your text comes from word processing files, you'll appreciate PasteUp's ability to import files created by WriteUp, WriteNow, WordPerfect, and Microsoft Word (RTF). It also knows how to use image filter services for pictures created on other operating systems. In fact, with the right filters, PasteUp can handle almost anything.

If you're a page layout novice, you'll be astounded how much you can accomplish above and beyond the limits of simple word processors. If you're an expert, you'll wonder why you've put up with the compromises of other operating systems for so long. Especially since PasteUp can perform sophisticated pre-press operations such as color separations, crop and registration marks, and printing to all supported PostScript devices.

Make an impact with PasteUp. Flip the page for a complete feature list and ordering information.
