

AGENCY NEWS

OBJECTIVE

Agency news is a multi-user software system for receiving, storing, distributing, browsing, searching and retrieving agency news. The system is composed of client and server software modules. Server software receives and processes news, while client software enables a user to browse, search and retrieve the news in a very sophisticated way.

The screenshot displays the 'Agency News' application window. At the top, there is a 'Search Time Period' section with buttons for 'today', 'yesterday', '2 days ago', '3 days ago', '4 days ago', '5 days ago', and '6 days ago'. Below this, there are input fields for 'From: 15/06/1994' and 'To: 15/06/1994'. A 'Search expression:' field is also present. Two buttons, 'Search' and 'All news', are located below the search fields. The main area of the window contains a list of news items, each with a timestamp, source, title, and category.
