Kagi Online Order Processing Service: http://order.kagi.com/?GL&S

Please read the Frequently Asked Questions and Known Problems sections of this documentation before sending e-mail. Thank you.

Send your shareware registration form to Kagi Shareware. Their e-mail address is given on the customized form you create with the "Register" application, so if you do not have their e-mail address, you are doing something wrong...

While we welcome and attempt to answer all e-mail, the response to our shareware is quite overwhelming and our mailboxes fill up very quickly. Please forgive us if we do not always reply promptly to your messages. We assure you that we do read all incoming e-mail, and in particular, we keep track of all bugs that are reported. If you do not hear back from us, it most likely means that we do not have anything helpful to tell you yet. To make our job easier, please read through this documentation before e-mailing us. Also, please do not include screen shots or lists of all your system extensions as these take up a great deal of space and are usually not necessary. If we need such information, we will ask you for it. Thank you.

Kaleidoscope is a "Fat Binary" containing both 680x0 and PowerPC native code for optimum performance on both Macs and PowerMacs. In other words, Kaleidoscope is Accelerated for Power Macintosh. Kaleidoscope requires a 68020 or better, so in particular it will not work on a Mac Plus. Sorry.
