Editor Preferences

Size Window

This is a popUp menu that sets the size of the HTML.edit application window to either a standard screen size, or a minimized or maximized state. See also Sizing Windows.

Remember Window Location

When checked, remembers the location of the HTML.edit application window between sessions. This location is reset if HTML.edit is run on a different sized monitor.

Text Font

Allows a selection of editor text fonts and sizes, selected from the Font and Size popup

Display Tool Palette When in Editor

When checked, enables automatic display of the tool palette upon entering the Editor window.

Simplified Tool Palette

When checked, uses a simplified version of the HTML.edit Tools palette. Some of the popUp menus of the simplified Tools palette have fewer commands, as well as no hilighting or indexing commands. When unchecked, uses the standard Tool Palette.

Hilight Style

This is a popUp menu that sets the hilight style to either bold or underline for use with the hilight commands such as Hilight HTML.

Report Template

This is a popUp menu that sets the Report Template for printing using the File menu's Print Text command. The choices are US Letter, US Legal, and A4 Letter.

Arrow Keys in Text

When checked, enables the cursor keys to be used to navigate within a text field rather than card-to-card.

Wrap Editor Text

When checked, automatically wraps the text within the bounds of the editor field. When unchecked, each return-delimited paragraph creates a new line. This option does not change the content of the document, only its display within HTML.edit.

Maintain Selection after Style Change

When checked, maintains the text selection after making an HTML style change. Because some HTML commands (such as list commands) intersperse tags into the text selection, this option does not work on all HTML commands.

Back to Preferences, on to HTML Preferences, or return to HTML.edit Features.
