

README file for TOPTOOLS

TOPTOOLS is a utility to be used with CorelDraw in Windows 3.1. It was written in Visual Basic 2.0.

TOPTOOLS adds a float button bar in your desktop. It performs the main functions of CorelDraw menus. Its goal is to speed up the use of CorelDraw, once the user does not need to navigate in menus.

To install TOPTOOLS, copy the file TOPTOOL3.EXE (for CorelDraw 3.0) or TOPTOOL4.exe (for CorelDraw 4.0) in your windows utility directory (or where else you want). Then, using File Manager, drag the file into the group you want the TOPTOOLS icon to stay.

The files Anibuton.vbx, Threed.vbx and Vbrun200.dll are needed by TOPTOOLS to run, but they are supplied by Visual Basic 2.0. If you already don't have them in your windows directory, copy them to the \WINDOWS or \WINDOWS\SYSTEM directory. These files are very common and used by many VB (2.0) programs.

Then, to use TOPTOOLS, run CorelDRAW and TOPTOOLS.

Enjoy it.

Note: This program is a freeware. You can use and distribute it free, since you include all the files (including this README too).

The author just asks for opinions and suggestions. Please, post a letter or a card to:
