

About PostNet!

PostNet! is a type 1 font that lets you print POSTNET bar coding on your mail. By using PostNet!, not only will your mail be processed more quickly, but you will also be eligible for significant postage discounts from the United States Postal Service (USPS).

Because PostNet! is a font, you work directly from within the database program you already own. This eliminates the need for purchasing dedicated bulk mail/mail list software. If you own Claris FileMaker Pro, you can even use the FileMaker Pro template that is included with this shareware package to manage your mail list.
