ppleScript™ Scripts

Quick Look

Use this document and the scripts provided to set up your system and try out the scripts.

This collection of AppleScript scripts was developed from users' suggestions. Use them as is, or if you're familiar with scripting, open them in the AppleScript Script Editor and modify them to suit your needs.

For background information on Apple Events scripting, see the "Preview of Apple Events Scripting with QuarkXPress" booklet included in the QuarkXPress box. For information about writing scripts, see the "Apple Events Scripting with QuarkXPress" document on your QuarkXPress Apple Events disk.

Getting Started

Press Cmd - 2 or click the right arrow on the Horizontal scroll bar to find out how to use this document and quickly access the information you need — including how to print and move around the document. As you move, the chapter indicator in the lower left corner of the screen will tell you where you are.

Use the Vertical scroll bar to see more information. If there is nothing more to read in a chapter, the vertical scroll bar will not be available.
