

About this patch...

This patch cannot work properly while virus detection software is running. Please make sure that you have disabled any virus detectors before applying the patch.

This patch is based on modifications to WabbitDA.145 and requires that you have a copy of Wabbit bearing the original name. The copy that this patch will produce by default, WabbitPunch, retains the version number 1.4.5.

If you want to replace the original Wabbit (for instance, you want to ensure that existing aliases point to the new Wabbit), you must use the exact name of the existing Wabbit in the Save dialog that follows. Otherwise, the patch produces a new copy of Wabbit, as mentioned above.

If you happen not to have an original copy of Wabbit, and you don't have the archive, you may be able to download one using the Anarchie bookmark included with this patch.

This patch application was made with ResCompare, a free resource comparison and patch-generation utility. ResCompare can be FTP'ed from most Macintosh archive sites. Send e-mail inquiries regarding ResCompare to Michael_Hecht@mac.sas.com.
