

Welcome to Clicker 3.0!

Well, this is a new version of my Control Panel "Clicker". Read the ReadMe File for more information about the new features.

There isn't much to set up. You can change on which actions Clicker should "Click". I recommend you use it all. But if you type very very fast (some 400 chars in one Minute), i think it's better to turn off the Key Down Options.

You don't have to reboot for changes take effect!!!

Clicker is MailWare. That means you have to send me E-Mail about what you think from it. You will receive a registration code then to disable the Messages. And read the ReadMe File! Thanks to the authors of ShowInItIcon!!
