Help ME

Of course, there are many ways of USING MacUpdate.   I'll give a few examples below, but before I do, let me say that YOU may try something that I never even considered in the design of MacUpdate.   I would really appreciate any success stories, failures, bug reports, or suggestions and comments of any sort.

To those of you who have sent in their experiences, either over E-Mail, or "SnailMail", I thank you.   You are helping me to improve my product, and so, in a sense, you are helping yourself.

If you find that you need to report a bug, be sure to include information such as: the model of Mac you are using, your system's "setup", and most especially, the setup and sequence of actions that cause the problem in MacUpdate (And ALL information in the error alert, if one is displayed).
