

Edit

Undo

- Undoes the last change made to the active movie.

Cut

- Clears the selected segment of the active movie, or, if none, the current frame.
- Saves it to the clipboard for use with Paste, Add, Replace and Add Scaled.

Copy

- Saves the selected segment of the active movie, or, if none, the current frame to the clipboard for use with Paste, Add, Replace and Add Scaled.

Tip: Hold down option to turn this command into Append.

— Append pastes the selected segment of the active movie onto the contents of the clipboard.

Paste

- Inserts the contents of the clipboard (obtained from Cut or Copy) after the current frame of the active movie.

Tip: Hold down option to turn this command into Replace.

— Replace inserts the contents of the clipboard
· unlike Paste, this overwrites the current selection.

Clear

- Clears the current movie selection, without saving it to the clipboard.
- Pressing the delete key has the same effect.

Select All

- Selects all of the active movie.

Tip: Hold down option to turn this command into Select None.

— Select None deselects any selection in the active movie.

Add

- Inserts the contents of the clipboard as a separate movie track
 - the added movie track starts at the current frame,
 - this is useful for adding a soundtrack to an existing movie.

Add Scaled

- Inserts the contents of the clipboard as a separate movie track
 - the added movie track starts at the current frame,
 - this is useful for adding a soundtrack to an existing movie,

- the duration of the added movie track is scaled to fit the selection
 - (stretching or squeezing the clipboard contents to fit).

Crop

- Clears the parts of the movie that are not selected
 - it reduces the movie to the current selection.

Copy Frame

- Saves the current frame as a PICT image to the clipboard.

Export Sound

- Saves the movie soundtrack as an AIFF sound file.

The following diagram summarises these editing operations.
