

About MYM2QIF

MYM2QIF is an application for converting Managing Your Money (MYM) reports to the QIF file format. The QIF file format can then be imported into other applications such as Quicken or Managing Your Money for Windows. Starting with version 4.0, MYM2QIF will import stock portfolios (see the section Stock Portfolios).

To install MYM2QIF, simply drag it to a folder on your hard drive. The Help file must either be in the same folder as MYM2QIF, or in the preferences folder in your System & folder.

If you downloaded MYM2QIF, you may need to first use BinHex to decode the file and one of the Stuffit translators to unstuff it.

Once you start MYM2QIF, you can print an invoice to pay your shareware fee. You can only convert approximately 15 transactions until you pay your shareware fee.
