

ADDRESSES+ v 1.0

(version française disponible sous le nom de **ADRESSES+** v 1.0)

Introduction

This model came out of the need to organise phone and addresses of the people I had to call as a volunteer for an non-profit organisation. I wanted to be able to search for particular groups of people and sort them according to particular criteria. I wanted for example people from a certain city, or only males or females, or only certain levels of income etc. I thus used the great versatility of FMP to achieve my ends, learning in the bargain how to construct models. I believe that other organisations or small businesses could use such a model without having to pay for more elaborate and specialised software.

I'm fully aware that there exist already other models of the kind. But those I have seen have one or all of the three following flaws: 1) lettering is too small (even in the free FMP models provided by Claris), 2) the interface looks rather dull due mainly to a lack of different colour, 3) you have to navigate through many panels to get various kind of informations. I thus tried to improve on those aspects. I hope I succeeded and that your feedback will help me to improve it even more.

Shareware notice

As you might have seen, there is no password for that model. I trust your sense of responsibility for the work which has been put into that project.

If you find it usefull and use it for your work, in a business or in some other kind of organisation, send, with the registration letter, 10\$ US or the equivalent in your national currency.

Group usage is priced as follows:

Σ between 2 and 10 users, 5\$US per person;

Σ 11 users and more: 50\$US plus 1\$ for every user passed 10

(example: 12 users = 50\$ + 2 \$ = 52\$)

Mode of paiement:

The simplest way is to send me cash (well wrapped to avoid inquiring eyes) in an envelope at the following address:

Alain Antinori
138 Argyle
Kirkland, Québec
Canada H9H 3J1

Payment by checks **for Canadians only**. It will be too expensive to exchange foreign checks. Again, sending cash is really the simplest way.

International money orders.

General Help

I assume you are familiar with FMPro. Let me just mention the difference between sorting and searching. Sorting will sort all the cards currently available. If you launch a search, you can sort only the set of cards resulting from the search. Consult your manual or the online help for more detailed info.

Σ The programmed envelope is a 4 1/8 X 9 1/2 inches (or 10,4cm X 24,1cm) envelope. **Be sure to enter the sender's address.**

Σ The programmed labels are Avery Laser 05260.

Comments & suggestions

Send me your comments and suggestions so that I can improve the model. If you decide to change it yourself, make sure you work out of a copy, especially if you are new to FMPro.

If you want to translate it in a language other than French or English, I would appreciate that you inform me so that we can work out an agreement.

Alain Antinori: <alain.a.g@sympatico.ca>
