

THE UNIVERSE OF DREW by Drew Henry

I hope that you had a nice vacation because now that it's over it's time to get back to work. The situation in this, your fifth mission, is that you have been given the task of figuring out a series of values, as described below.

In order for you to go on to your next mission, you will have to tell me what the sum of those values are. If you know your functions you should have no trouble at all.

You really shouldn't need any help on this one, but if you do, press [Alt] [A] for the solution or to start over. Select "Let Me Try" to begin this mission.

\*\*\*\*\*

I. Future value of an annuity if:

Payment = \$2000  
Interest = 8.8%  
Terms = 120 months

II. Present value of an annuity if:

Payment = \$2000  
Interest = 8.8%  
Terms = 120 months

III. Payment on a mortgage if:

Principal = \$110,000  
Interest = 11.5%  
Terms = 360 months

Now page down once.

\*\*\*\*\*

You have a twofold task with respect to the values of the functions listed above. You will need to tell me what the amount of the future value less the present value is. Then you will have to tell me what your mortgage payment is.

Sheet1

If you think that you know what the answers are, press [Alt] A. You will first be prompted for the future/present value amount and then for the mortgage payment amount. The only way you can go on to the next mission is by telling me what both amounts are.
