

Black Night Connection Set

Black Night's built-in connection tools have now been superceded by the Black Night Connection Set. The Connection Set includes:

- Black Night Serial Tool
- Black Night Modem Tool
- Black Night Telnet Tool

These are all Communication Toolbox Connection Tools and can be used with Black Night and any other CTB aware application. Currently they are only available as plug-in tools, but they will eventually be built into Black Night Pro (not released or even finished at the time I wrote this).

The Black Night Connection Set can be obtained from the Info-Mac and CompuServe archives (amongst other places).
