

Communication Suite

Black Night introduces the Communication Suite to supplement Apple's Required and Core Suites. The Communication Suite introduces three new commands:

- send
- listen for
- wait until

and nine new classes:

- connection
- terminal
- transfer
- macro
- prompt
- search
- timer
- helper
- log

Between the Apple Suites and the Communication Suite, you can script just about every single function that Black Night can perform. For more information on the Communication Suite, please open the Black Night Dictionary by Dropping Black Night on the Script Editor Application.
