

[More On Using The Problem List Window:](#)

Once a file or files have been selected, the Fix and Get Info buttons become active.

Selecting the Get Info button will bring up a new window that shows all of the relevant information about each problem found with the selected file.

Use the Fix button to have Alert! fix all of the problems that it can within the selected file or files. You will be prompted as necessary when a decision is required in order to fix something.
