

Hi all. Here are new version of the remote control program. Please notice that this is only a beta release. The documentation is not finished, and there are a timing problem in the LEARN program (when learning new remotes the LEARN program creates pulse lengths that sometimes are a bit too small). I am trying to fix that. I am releasing it anyway so that people can test it. Hope you'll find it useful.

The most of the code is written in user rpl so it will be safe to use, even though it is a beta release. The parts that is in ml or system rpl are tested for about 2 months without any problems.
