

Why Choose ClarisWorks for Your Power Macintosh?

The number-one best-selling integrated software for Macintosh, ClarisWorks, is the first complete productivity solution accelerated for the Power Macintosh. There are five very good reasons why you should consider ClarisWorks for your Power Macintosh. ClarisWorks is:

- Complete—It has all the functionality you need to produce documents quickly
- Capable—Its document-centric user interface lets you work the way you want
- Compact—It requires less than 1/10 of the disk and 1/4 of the RAM of Microsoft Office
- Cost Effective—Overall cost of ownership is dramatically less than a suite
- Compatible—ClarisWorks coexists beautifully with your existing software.

Each of these points are now discussed in more detail.

Complete—ClarisWorks has all the functionality you need

ClarisWorks includes a powerful word-processor with outliner, 120,000 word spell checker and 600,000 word thesaurus, spreadsheet with charting, graphics, database, slide show presentations, and electronic communication capabilities. ClarisWorks provides you with all the features you need to produce polished memos and letters, budgets, contact lists, presentations, professional sales flyers, “form” letters, and mailing labels faster than you can imagine. Plus, ClarisWorks eliminates the need for clumsy page previews. With ClarisWorks you always work in a WYSIWYG view so you can see your work displayed exactly as it will print.

Capable—ClarisWorks’ document-centric user interface works the way you want

ClarisWorks takes integration and ease of use to a new level. Rather than stitching together separate applications which force you to switch back and forth between different screens while you’re working, ClarisWorks lets you create documents naturally. With ClarisWorks you always work within a single application. Simply select the appropriate tool to write text, create tables, analyze numbers, or produce charts or graphics. The tools work consistently enabling you to produce polished documents or presentations incorporating any combination of text, graphics, tables, spreadsheets, and charts. ClarisWorks does the work of five dedicated applications, but with its superior integration you will be consistently more productive.

Compact—ClarisWorks requires much less computer resources than Office

ClarisWorks requires only 800K of disk space and easily runs in under 1 megabyte of RAM. ClarisWorks literally needs only 1/10th the disk space of Microsoft Office. You’ll actually have disk space left for your own files!

Cost Effective—Overall cost of ownership is dramatically less than with Office

Would you be surprised to know that ClarisWorks consistently outsells Microsoft Office? ClarisWorks is less expensive to purchase initially and you only upgrade a single program instead of four or five. Since it’s only a single streamlined application it requires significantly less training and ongoing support. ClarisWorks also enables you to contain your hardware expenses by requiring only base level RAM and disk configurations. Adding up all the cost savings yields a very attractive return on investment figure.

Compatible—ClarisWorks coexists beautifully with your existing software

Claris understands that you cannot purchase new software in a vacuum. To ensure that ClarisWorks will work with your already installed software it reads and writes Excel and Word files. Plus over 35 other import and export file filters are provided supporting the most popular Macintosh, Windows and DOS applications.

Try ClarisWorks out yourself!
