Operation

Program Description

What is *WinZip® Self-Extractor*?

WinZip Self-Extractor is a utility program that creates native Windows self-extracting Zip files. These self-extracting Zip files are ideal for Internet file distribution because they: (1) can contain multiple compressed files, ensuring that important files do not become separated from the rest of the package; (2) allow the receiver to use a familiar Windows interface to decompress files, without owning or knowing how to use a separate unzip utility; and (3) optionally run a "setup" or "installation" program, which may be included by the developer when the files are decompressed.

WinZip Self-Extractor is a more powerful version of <u>WinZip Self-Extractor Personal Edition</u>, which is included with WinZip®, an award winning utility to manipulate Zip files.   For more information on WinZip see the section titled <u>About WinZip</u>.

For information describing Zip files and self-extracting Zip files, the benefits of self-extracting Zip files, and a brief overview of *WinZip Self-Extractor* operation, see the section titled <u>About Self-Extracting Zip Files</u>

Summary Of Key *WinZip Self-Extractor* Features

- Easy distribution of one or more compressed files.
- Low overhead (as little as 12k depending on options).
- Optional support for 32-bit (Windows 95 and Windows NT) self-extracting Zip files, including support for Microsoft® Authenticode™ technology.
- Optional support for Windows+MS-DOS self-extracting Zip files, so users without Windows can unzip your files.
- Use your own icon for self-extracting Zip files.
- An optional command is run when the unzip operation completes, making it easy to run a SETUP program included in a self-extracting Zip file.
- Any folder information in the Zip is automatically restored.
- 100% compatible with the Zip 2.0 standard.

Awards and Magazine Quotes

"WinZip Self-Extractor: Another five-star gem" ZDNet AnchorDesk, 1/13/97

"All Star Award", MultiMedia World, 6/96

"Finalist", 1995 Ziff-Davis Shareware Awards

"Recommended Download", Windows Magazine 6/95

"Unzipping self-extracting files is as easy as double clicking on an icon", PC Magazine, 5/16/95

About Self-Extracting Zip Files

This topic describes Zip files and self-extracting Zip files, discusses the benefits of self-extracting Zip files, and briefly describes how self-extracting Zip files work.

What is a Zip file?

The Zip file format is an industry standard for compressing and grouping files.   One Zip file can contain multiple files.   Files contained in a Zip are usually compressed.

Typical uses for Zip files include:

- Most files available in "file areas" on bulletin boards and electronic services like CompuServe and the Internet are distributed as Zip files.   Two benefits of using Zip files for electronic file distribution are that only one file transfer operation ("download") is required to obtain all related files, and file transfer time is minimized because the files in a Zip are compressed.

- It is often useful to send a group of related files to an associate.   Rather than distributing individual files it is often easier to distribute the files as a Zip file to benefit from the file grouping and compression.

Zip files are created using a Zip utility like WinZip® or the PKZIP® utility from PKWARE®.

What is a Self-Extracting Zip File?

A self-extracting Zip file is an executable program file (.EXE file) that includes a Zip file and software to extract or "unzip" the contents of the Zip file.   Users can run (execute) a self-extracting Zip file just as they run any other program.

When a self-extracting Zip file created by *WinZip Self-Extractor* is run, a dialog box is displayed.   This dialog box makes it easy for the user to change the "unzip to" folder and change other options before extracting or "unzipping" the files in the self-extracting Zip file.

Self-extracting Zip files created by *WinZip Self-Extractor*   are

- 100% compatible with the Zip 2.0 file format, so they can be unzipped by standard unzip utilities like WinZip and PKUNZIP.

- Only about 12k larger than a regular (not self-extracting) Zip file when using default options.

What are the advantages to Self-Extracting Zip Files?

Users can extract or "unzip" files from a self-extracting Zip file without running a separate unzip utility or knowing how to use an unzip utility.   Thus self-extracting Zip files are particularly suited for distribution of software to beginning users who are not familiar with the concept of Zip files.

Self-extracting Zip files created by *WinZip Self-Extractor* are native Windows programs so they are easy to use even for users with no MS-DOS experience.

How Does it Work?

There are two parts to *WinZip Self-Extractor*:

1) The *WinZip Self-Extractor* program creates self-extracting Zip files.

2) When *WinZip Self-Extractor* creates a self-extracting Zip file it includes part of itself in the self-extracting Zip file.   The part of *WinZip Self-Extractor* included in the self-extracting Zip file is what makes it possible to unzip the files by simply running the self-extracting Zip file.

The person who creates the self-extracting Zip file runs *WinZip Self-Extractor* once, specifying the name of the Zip file and options, including the default "unzip to" folder and a program to be run automatically when the unzip operation completes.   *WinZip Self-Extractor* stores this information in the self-extracting Zip file so it is available when the self-extracting Zip file is run.   See the section titled Creating Self-Extracting Zip Files for details on the procedure, and the section titled Copyright/License/Warranty for information on licensing.

Copyright/License/Warranty

Copyright

WinZip® Self-Extractor Copyright © 1995-1997 by Nico Mak Computing, Inc.
All rights reserved.

License Agreement

You should carefully read the following terms and conditions before using this software.   Unless you have a different license agreement signed by Nico Mak Computing, Inc., your use of this software indicates your acceptance of this license agreement and warranty.

For information on distributing the evaluation version of *WinZip Self-Extractor* see the section titled <u>Evaluation License</u>.

Registered Version

Each registered copy of *WinZip Self-Extractor* may be used at a single workstation to create an unlimited number of freely distributable royalty-free self-extracting Zip files, subject to the following conditions:

- A separate registered copy of *WinZip Self-Extractor* must be obtained for each workstation on which *WinZip Self-Extractor* will be used to create self-extracting Zip files, even if such use is only temporary.   This is not a "concurrent use" license.

- Self-extracting Zip files created by *WinZip Self-Extractor* contain, among other things, a portion of *WinZip Self-Extractor*, including copyrighted software, proprietary notices, and identifying information (the "Extraction Software").   No registered user, nor anyone else, may alter or modify the Extraction Software.   You cannot give anyone else permission to modify the Extraction Software.

All rights not expressly granted in this license agreement are reserved entirely to Nico Mak Computing, Inc.

Governing Law

This agreement shall be governed by the laws of the State of Connecticut.

Disclaimer of Warranty

THIS SOFTWARE AND THE ACCOMPANYING FILES ARE SOLD "AS IS" AND WITHOUT WARRANTIES AS TO PERFORMANCE OR MERCHANTABILITY OR ANY OTHER WARRANTIES WHETHER EXPRESSED OR IMPLIED.   Because of the various hardware and software environments into which *WinZip Self-Extractor* may be put, NO WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE IS OFFERED.

Good data processing procedure dictates that any program be thoroughly tested with non-critical data before relying on it.   The user must assume the entire risk of using the program.   ANY LIABILITY OF THE SELLER WILL BE LIMITED EXCLUSIVELY TO PRODUCT REPLACEMENT OR REFUND OF PURCHASE PRICE.

Evaluation License

Evaluation and Registration

This is not free software.   You are hereby licensed to use the evaluation version of *WinZip Self-Extractor* for evaluation purposes without charge for a period of 21 days.   If you use this software after the 21 day evaluation period a registration fee is required, as described in the *WinZip Self-Extractor* <u>order form</u>.

Under no circumstances are you licensed to distribute self-extracting Zip files created by the evaluation version of *WinZip Self-Extractor*.

Unregistered use of *WinZip Self-Extractor* after the 21-day evaluation period is in violation of U.S. and international copyright laws.

Distribution of *WinZip Self-Extractor*

You are hereby licensed to make as many copies of the evaluation version of this software and documentation as you wish; give exact copies of the original evaluation version to anyone; and distribute the evaluation version of the software and documentation in its unmodified form via electronic means. There is no charge for any of the above.

You are specifically prohibited from charging, or requesting donations, for any such copies, however made; and from distributing the software and/or documentation with other products (commercial or otherwise) without prior written permission.

Order Form

WinZip® Self-Extractor 2.1 Registration Form/Invoice

To print this order form, click on **Print Topic** in the File pull-down menu**.**

New: You can place secure credit card orders via the World Wide Web using the Order link on the WinZip home page: **http://www.winzip.com**.

Customer information is considered confidential and will not be shared or distributed to any third party.

Ordering by check: To order by check send this order form and a check to "WinZip Self-Extractor", Nico Mak Computing, Inc., P.O. Box 540, Mansfield, CT 06268, USA.   Payments must be in US dollars drawn on a US bank, or you can send international postal money orders in US dollars.

Credit card ordering: For information on ordering by MasterCard, Visa, American Express, or Discover by phone, FAX, or CompuServe email, or postal mail, click here: Credit Card Ordering.

CompuServe Registration: To have the registration fee added to your CompuServe bill type GO SWREG at the ! prompt and register product ID 4866.

Credit Card Ordering Information

To print this order form, click on **Print Topic** in the File pull-down menu**.**

You can place secure credit card orders via the World Wide Web using the Order link on the WinZip home page: http://www.winzip.com.   You can also place MasterCard, Visa, American Express, and Discover orders for **WinZip Self-Extractor** through PsL.   The best way to reach PsL is by fax to 1-713-524-6398 or by CompuServe mail to 71355,470 or Internet mail to 71355.470@compuserve.com.   You can also call PsL at 1-800-242-4PsL(4775) or 1-713-524-6394 between the hours of 8:30 am and 5:00 pm CST Monday-Friday, except holidays.

Credit card orders can be mailed to PsL at P.O. Box 35705, Houston, TX 77235 USA.

PsL requires the following information:

```
Credit Card [ ] MasterCard [ ] VISA [ ] AMEX [ ] Discover

Credit Card Number:  _____

Expiration Date:     _____

Name On Card:        _____

Billing Address:     _____

                     _____

                     _____
```

PLEASE INCLUDE THE STANDARD WINZIP SELF-EXTRACTOR ORDER FROM THE PREVIOUS PAGE WITH YOUR ORGANIZATION NAME ETC

Nico Mak Computing, Inc. cannot be reached at the numbers above.

These numbers are for PsL, a credit card order taking service only.

Any questions about the status of the shipment of an order, refunds, registration options, product details, technical support, volume discounts, dealer pricing, site licenses, etc., must be directed to Nico Mak Computing, Inc., P.O. Box 540, Mansfield, CT 06268, USA or by CompuServe mail to 70056,241 or by Internet mail to 70056.241@compuserve.com.

Purchase Orders

Purchase orders (net 30 days) are accepted only from government and accredited educational institutions and major corporations, provided that they are submitted on purchase order forms with a purchase order number.   Purchase orders should be sent to Nico Mak Computing, Inc., P.O.   Box 540, Mansfield, CT 06268.   Please be sure to include the standard WinZip Self-Extractor order form with a purchase order. The Federal Tax Id for Nico Mak Computing, Inc. is 06-1378727. Due to the extra work involved in processing purchase orders you are encouraged to use a credit card, CompuServe's SWREG registration service, petty cash, or an expense account when possible for small orders.

About WinZip®

WinZip is an award-winning utility that brings the convenience of Windows to the use of Zip files.   WinZip includes built-in PKZIP compatible ZIP and UNZIP, so PKZIP and PKUNZIP are not needed for basic archive operations, and features an intuitive point and click interface for viewing, running, extracting, adding, deleting, and testing files in archives.   Optional virus scanning support is included.

The WinZip product includes *WinZip Self-Extractor **Personal Edition***.   For more information, see the section titled Differences between WinZip Self-Extractor and the Personal Edition.

WinZip won the 1997 Home Office Computing "Editor's Pick" Award, 1996 PC Week Labs "Analyst Choice" Award (December 9), PC Magazine 1996 Best Utility Shareware Award, the Windows Magazine 1996 WIN100 Award, was a finalist for the PC Computing 1995 MVP Awards at Comdex, and was voted "Best Utility" at the 1994 Shareware Industry Awards. *WinZip Self-Extractor* was a finalist for the 1995 Ziff-Davis Shareware Awards.

Magazine quotes include:

- "Easy to learn yet robust enough to satisfy power users", PC Magazine, 4/8/97
- "For working with .ZIP archives, there's no better tool than WinZip", Windows Sources, 3/97
- "It's rare to find one product in a hard-fought market category that bests its competition in nearly every respect.   WinZip 6.2 is one of these products.   It towers over the rest of the market."   PC Week 12/9/96
- "Of the many file-compression and extraction utilities out there, this one is the best - and the easiest to use" Windows Magazine, 11/96
- "The best data-compression and archiving utility around" PC Computing 7/96

You can download an evaluation copy of WinZip from the WinZip home page (http://www.winzip.com) or the GO WINZIP area on CompuServe.

Differences between WinZip Self-Extractor and the Personal Edition

WinZip Self-Extractor **Personal Edition** is included with <u>WinZip®</u>.   **WinZip Self-Extractor 2.1**, a $49 add-on to WinZip, includes the following features not available in the Personal Edition:

- Features to automate and customize software installation, such as the ability to specify an icon and text for the main self-extractor dialog box, and to delete temporary files after running a setup program.   It includes support for the InstallShield 3.0 SETUP program.
- Ability to run a command when the unzip operation completes.
- Self-Extracting files can be created from the command line.
- An option to create a single self-extracting Zip file that runs under either MS-DOS or Windows.
- All versions can be created with English or German messages.
- Ability to automatically extract files when the EXE file is run.
- A Wizard to simplify the process of building self-extracting files.
- Support for password protected Zip files.
- All 32-bit self-extracting Zip files support Microsoft® Authenticode™ technology.
- User-specified icons.
- An option to create self-extracting Zip files that unzip automatically.

Note: some of these features may be included in future versions of WinZip Self-Extractor Personal Edition.

Version History

WinZip® Self-Extractor 2.1 is a superset of versions 2.0 and 1.0.   Everything that worked with earlier versions works the same way with 2.1, but new features are available, including:

- Password support: all types of self-extractors except "Compact" and "MS-DOS + Windows" support industry standard Zip encryption.

- All 32-bit self-extracting Zip files support Microsoft® Authenticode™ technology.   In earlier versions, the self-extracting Zip file's integrity check conflicted with Authenticode.   (For information on Authenticode, visit the Microsoft home page, click the "Search" button and search for "authenticode code signing".)

- User-specified icons: you can use an icon of your choice for all types of self-extractors except "Compact" and "MS-DOS + Windows".   These icons are displayed in the Explorer (in version 2.0, user-specified icons were only used in the dialog box of self-extractors for software installation).

- While version 2.0 made it possible to build 32-bit self-extracting Zip files, the program that created these 32-bit files was actually a 16-bit program.   A 32-bit version (wzipse32.exe) is now included.

- You can now create self-extracting Zip files that unzip automatically.   (In version 2.0 the end-user had to specify /auto on the command line while running the self-extracting file to unzip automatically.)   Use this new feature with caution: if you are planning to post this file on the Internet or an online service like CompuServe or AOL, you should be aware that some sysops refuse to accept files that unzip without a prompt.

- The "Mail Self-Extracting Zip File" button in the final wizard panel makes it easy to send a self-extractor to another user by e-mail (this feature is available only if your system supports MAPI, the standard Mail Application Program Interface).

Version 2.0 added these features:

- Options to create self-extracting ZIP files with new headers:

  - 32-bit Win32 headers

  - 16-bit Windows headers with Windows 95 long filename support

  - MS-DOS support (one EXE works on either MS-DOS or Windows)

- Improved automation and customization for software installation, such as the ability to specify an icon and text for the main dialog box, and to delete temporary files after running a setup program. Includes support for InstallShield Corporation's SETUP program.

- All versions can be created with English or German messages.

- Ability to automatically extract files when EXE file is run.

- An optional progress meter while unzipping.

- An uninstall facility for the *WinZip Self-Extractor* package.

- Command lines options can be included in a file using the @filename syntax, for example "winzipse <some options> @"continued_options.inp".

- A Wizard to simplify the process of building self-extracting files.

Acknowledgments

Many people have helped make *WinZip® Self-Extractor* what it is, by making suggestions, helping test, reporting bugs, etc., but particular thanks goes to Ted Abell, John Conde, Joel Diamond, Chris Dunford, Gregg Hommel, Oyvind Kaldestad, Kevin Kearney, Jim Larkin, Steve Queen, Mark Stern, Nick Sweeting, Mike Tajmajer, and Hans Top.

Special thanks to Edward Stumpf for many suggestions and lots of good feedback.

WinZip Self-Extractor incorporates compression code by the **Info-ZIP** group, which is used with their permission.   Special thanks to the entire Info-Zip group, in particular to Jean-loup Gailly, Greg Roelofs, and Mark Adler. The original Info-Zip sources are freely available from CompuServe in the pcprog forum and by anonymous ftp from the Internet site ftp.uu.net:/pub/archiving/zip. We will also, upon request, mail you the Info-Zip sources if you send a self-addressed stamped envelope to the address in the WinZip Self-Extractor "About" dialog box.

Technical Support

Technical support is available at no charge.   Support options are:

CompuServe:	enter GO WINZIP and leave a message in the WinZip section, or send email to 70056,241
Internet:	send email to support@winzip.com
Postal Mail:	write to "Technical Support", Nico Mak Computing, Inc., P.O. Box 540, Mansfield, CT 06268 USA

        Solutions to Common Problems
        Hints and Tips
        Tips for Creating Self-Extractors for Software Installation

Solutions To Common Problems

1) If someone downloads a self-extracting Zip file and reports that they get the system message "out of memory" when trying to run it, the reason is usually that the file was corrupted during the file transfer.   Both DOS and Windows often issue "out of memory" errors when you attempt to execute invalid executable files.   Usually the best solution to this problem is for the user to obtain another copy of the self-extracting Zip file.

2) If the WinZip Self-Extractor dialog box is not displayed when a user runs a self-extracting Zip file, the reason is usually that an EXE, FON, DLL, or DRV file with the same name is already running on the user's system.   For example, if you create an EXE file called USER.EXE, you will not be able to run it because Windows automatically loads a file called USER.EXE, and Windows does not allow you to run two different files with the same name.   WinZip Self-Extractor checks for conflicts on **your** machine when you create a self-extracting Zip file, but it is of course impossible to check for conflicts on your users machine.   A simple solution to this problem is to rename the self-extracting Zip file.

3) If you have trouble getting a Self-Extracting Zip file for Software Installation to work, see the section Tips for Creating Self-Extractors for Software Installation.

Hints and Tips
Tips for Creating Self-Extractors for Software Installation

Hints and Tips

1. When running WinZip Self-Extractor from a BAT file or "make" file under Windows 95 you can wait for WinZip Self-Extractor with the command
START /WAIT WINZIPSE.EXE -y [other options] filename.zip
To avoid the 127 character command line length limit, you can use the "@-response file syntax" described in the section titled Command Line Options.

2. If you are running a self-extracting Zip file from another program, you can specify the /auto parameter to unzip the files without user interaction.   This option has the same effect as clicking the Unzip button when the main dialog box is displayed, and, if the unzip operation is successful, clicking the Close button.   You can specify a folder name to unzip files into that folder, for example, if modem.exe is a self-extracting file, the command

   modem.exe /auto c:\modem

   will automatically extract files into the c:\modem folder.

3. To make the default **Unzip To** the folder containing the self-extracting zip file, specify "." (a single period, with no quotes) as the folder name when creating the self-extracting zip file.

4. If you create a 32-bit self-extractor and specify a file inside your Zip file as the "command to issue when the unzip operation completes", insert the characters ".\" in front of the command.   This will ensure that the command in the Zip file is run, even if a file with the same name exists in the directory containing the self-extractor.   For example
   `.\setup.exe`

5. You can use the -ST command line switch to specify text for the title bar of your self-extracting Zip file.   For example, the command
winzipse **-st"Installation Program"** filename.zip
will put the text **Installation Program** in the initial dialog displayed when your self-extractor is executed.

6. If you have trouble getting a Self-Extracting Zip file for Software Installation to work, see the section Tips for Creating Self-Extractors for Software Installation.

Solutions to Common Problems
Tips for Creating Self-Extractors for Software Installation

Tips for Creating Self-Extractors for Software Installation

Self-Extracting Zip file for Software Installation take a bit more work to set up than Standard Self-Extracting Zip File, but provide a more professional looking installation.   If you are having trouble getting a Self-Extracting Zip file for Software Installation to work, try these tips:

1) Try building a Standard Self-Extracting Zip File.   If a Standard Self-Extracting Zip files works, check the **Wait for** field in the Wizard, or the -wait parameter if you are using command line options.   If you are using InstallShield, be sure you have version 3.0 and have included the file _isdel.exe in your Zip file.

2) Keep in mind that a Self-Extractor for Software Installation is designed to work with installation programs that would normally copy all files from a floppy disk or CD-ROM.   A Self-Extractor for Software Installation unzips files to a temporary directory, runs the command you specify, and when that command completes, it DELETES ALL THE TEMPORARY FILES, without regard to any further processing you have planned for the extracted files.   Therefore, it is necessary for the setup command to make permanent copies of files extracted from the self-extracting archive before they terminate, if permanent copies are needed, just as the setup command would need to copy files from a floppy disk or CD-ROM.   Self-Extractors for Software Installation ALWAYS unzip to a temporary directory; if you need to unzip to a specified directory, you must use a Standard Self-Extracting Zip File.

3) The following applies only if you are using Visual Basic's Application Setup Wizard.   This Setup Wizard creates a two-step installation process, similar in some ways to InstallShield's setup/_isdel pair of application setup programs.   Such a Visual Basic application installation begins when the program named "setup" runs.   The setup program launches, in turn, a program named setup1 (or, if you are using a 32-bit edition of Visual Basic, a program named setup132).   The setup1[32] program completes the application installation procedure.   If you wish to package such a Visual Basic application installation procedure in a software installation self-extractor, you will need to specify
setup
as the default command to execute after the unzip operation completes, and
setup1 (or setup132)
as the "Wait For" command, either in the appropriate WinZip Self-Extractor Wizard panel, or via the WinZip Self-Extractor command line options.   Failure to specify setup1 (or setup132) as the "Wait For" command could result in WinZip Self-Extractor prematurely deleting your application setup files, resulting in an incomplete installation or in some other error.

While it is possible that WinZip Self-Extractor will not be able to wait for your install program, please check the "WinZip Self-Extractor" page on the WinZip site for the latest information.   If you have questions, let us know.

Solutions to Common Problems

System Requirements

Documentation:

The documentation assumes you know how to use Windows, and know how to create Zip files.

Creating Self-Extracting Zip files:

WinZip® Self-Extractor does not create Zip files, so you need a utility like WinZip that creates Zip files.

Standard English language self-extracting Zip files without long filename support and MS-DOS support can be created under MS-DOS or Windows, as with WinZip Self-Extractor 1.0.   All other self-extracting files can only be created under Windows (3.1, 95, or NT).

Running Self-Extracting Zip files:

32-bit Win32 self-extracting files can only be run under Windows 95 and Windows NT.

Except the "compact" header, all 16-bit headers self-extracting Zip files support long filename under Windows 95.   The current versions of Windows NT do not let 16-bit applications access long filenames, so 32-bit self-extracting files are recommended if you use long filenames targeted for Windows NT.

WinZip Self-Extractor Distribution Files

Filename	Description
README.TXT	introductory information
LICENSE.TXT	license agreement/warranty
WINZIPSE.TXT	extracts from online documentation
WINZIPSE.HLP	documentation in online hypertext help format
WINZIPSE.EXE	required executable (for Windows 3.1, 95, and NT)
WZIPSE32.EXE	required executable for Windows 95 and NT
ORDER.TXT	order form
WHATSNEW.TXT	list of recent changes
FILE_ID.DIZ	brief description for bulletin boards
VENDOR.TXT	information on distribution of the evaluation version
SETUP.EXE	* 32-bit installation program helper
SETUP32.EXE	* installation program

Note: files marked with an asterisk are not copied to your hard disk.

Installation

To install *WinZip® Self-Extractor* simply run the SETUP program on the distribution disk and follow the prompts.   This will install the files and create a program group called *WinZip Self-Extractor*.

Uninstallation

WinZip Self-Extractor includes an "uninstall" facility.   You can run it as follows:

- Under Windows 3.1 and Windows NT 3.5 and 3.51: activate the Program Manager, select WinZip Self-Extractor from the Window menu, and double click on the "Uninstall WinZip Self-Extractor" icon.

- Under Windows 95 or Windows NT 4.0: from the Start menu select Programs->WinZip Self-Extractor->Uninstall WinZip Self-Extractor.

You can also uninstall WinZip Self-Extractor manually by following these instructions:

1. Using the Windows File Manager, Explorer, or some other utility, delete the *WinZip Self-Extractor* folder and all of the files it contains.

2. Delete *WinZip Self-Extractor*'s icons and program group.   Under Windows 3.1 or NT 3.51, activate the *WinZip Self-Extractor* group and then press the Delete key repeatedly until all of the icons have been deleted. After the group is empty, you can press the Delete key one more time to delete the group itself.   Under Windows 95 or NT 4.0, select Settings->Task Bar from the Start menu, click the Start Menu Programs tab, click Remove, select *WinZip Self-Extractor*, then push the Remove button.

3. If you have specified WinZip Self-Extractor as the "Make EXE" program in WinZip, activate WinZip, select Program Locations from WinZip's Options menu, then blank out the **Make Exe** field.

Creating Self-Extracting Zip Files

To create a self-extracting Zip file first run *WinZip® Self-Extractor*.   You can do this in one of three ways:

1. Start *WinZip Self-Extractor* like any other Windows program:
   Under Windows 95: select Start->Program Files->WinZip Self-Extractor->WinZip Self-Extractor
   Under Windows 3.1: double click on the *WinZip Self-Extractor* icon in the *WinZip Self-Extractor* program group

2. Run *WinZip Self-Extractor* directly from WinZip 6.0 or later.   Just select **Make EXE File** from the WinZip Options menu and use the WinZip Self-Extractor Wizard.   Before doing this you must first specify the full filename (including folder information) of *WinZip Self-Extractor* in the **Make EXE** field in the WinZip Options/Program Locations dialog box.   When *WinZip Self-Extractor* is run for the first time on your system it will offer to do this for you if it detects WinZip installed on your system.

3. Run *WinZip Self-Extractor* from the DOS prompt: Command line options are required for this choice.   For a list of options see the section titled Command Line Options.

Notes:

- When the self-extracting Zip file is run, any folder information stored in the Zip file will automatically be used.

- *WinZip Self-Extractor* does not handle password protected Zip files or Zip files that span disks.

Password Security

You can create all types of self-extractors except "Compact" and "MS-DOS + Windows" from Zip files encrypted with industry standard Zip password protection.   To create password protected Zip files you need WinZip or a compatible Zip utility.   Then you can use WinZip Self-Extractor to create an encrypted self-extracting Zip file from the encrypted Zip file, just as you would create a non-encrypted self-extracting Zip file from a non-encrypted Zip file.   A user is prompted for the password when the self-extracting Zip file is run.   Unless the correct password is supplied, the files will not be extracted.

WinZip uses the industry standard Zip 2.0 encryption format.   Password protecting files in a Zip provides a measure of protection against casual users who don't have the password and are trying to determine the contents of your files.   The Zip 2.0 encryption format, however, is not as secure as DES and the RSA public key formats used by programs such as PGP, and does not provide absolute protection against determined individuals with advanced cryptographic tools.   Note: there are two reasons WinZip does not implement a more secure encryption format: (1) a different format would not be compatible with the Zip 2.0 standard, so other Zip utilities would not be able to decrypt the files, and (2) there are currently severe U.S. government restrictions on the export of encryption technology.   If you require strong encryption, we recommend you use a specialized encryption software instead of the Zip 2.0 encryption format.

The Main *WinZip Self-Extractor* Window

*** OBSOLETE *** REPLACED BY WIZARD ***

When you start *WinZip® Self-Extractor* a dialog box with the following fields is displayed:

- The name of the Zip file to turn into a self-extracting Zip file.   You can either type the name, or press the **Browse** button and use the standard Open dialog box to select a Zip file.   Alternately, you can use the standard File Manager drag and drop interface to drop a Zip file onto *WinZip Self-Extractor*, or, if you have installed *WinZip Self-Extractor* in WinZip, simply select **Make .EXE File** from a WinZip window.

- The default target folder for the unzip operation.   If left blank the folder specified by the user's TEMP= environment variable is used.   This is generally the best choice if your Zip file contains a SETUP program that will copy the unzipped contents of the Zip file to another folder.   If you do not have a SETUP program you will probably want to choose a name related to the contents of the Zip.   For example, you might use "c:\modem" for a Zip containing a help file called "modem.hlp".   This field is the equivalent of the -d command line option.

- The optional command to execute when the unzip operation completes.   This command will be issued from the user's **Unzip To Folder**, so folder information is generally not needed in this command.   The command can be a program already installed on the user's machine, such as NOTEPAD or WINHELP, or it can be a program you have included in the Zip file, such as your own SETUP.EXE.   (Technical note for interested software developers: the optional command is run via the WinExec API function, not the ShellExecute API function.)   **You must specify a command name, not just a filename.**   Typical commands are:

  - SETUP - to run the SETUP program in the Zip file

  - WINHELP myfile.HLP - to start the Windows HELP engine on a file in the Zip

  - NOTEPAD myfile.TXT - to start NOTEPAD on a file in the Zip

  This field is the equivalent of the -c command line option.

- Four types of self-extracting Zip files can be created:

  1. Compact 16-bit Windows: This option creates self-extracting Zip files without long filename support or a progress meter.   If long filenames are not used, these files work under Windows 3.1, Windows 95, and Windows NT.   (Historical note: these files are almost identical to those created by WinZip Self-Extractor 1.0).

  2. Standard 16-bit Windows: This option creates self-extracting Zip files with long filename support and a progress meter.   However, if long filenames are used and the self-extracting Zip is run on a system that does not support the 16-bit long filename APIs (e.g. the current version of Windows NT), a message box is displayed warning the user of potential problems, and any long filenames will be truncated.   This message box is displayed after the optional comment message box.

  3. MS-DOS and 16-bit Windows: This option creates self-extracting Zip files that can be run either from Windows or from the MS-DOS prompt.   Long filenames are not supported, since MS-DOS does not support them.

  4. 32-bit Windows 95 and NT: This option creates self-extracting Zip files that include long filename support under Windows 95 and Windows NT.   Because these self-extracting files are full 32-bit programs they will not run under Windows 3.1.

  These options correspond to the -compact, -standard, -dos, and -win32 command line options.

- Whether English language or German language self-extracting Zip files should be built.

- Whether the CTL3D.DLL should be used to generate 3D effects for the self-extracting Zip file. CTL3D.DLL is used by many applications to generate 3D effects so there is a good chance it will exist on a lot of target systems.   If this option is specified WinZip will try to load CTL3DV2.DLL, and if not found, will try to load CTL3D.DLL.   Note that there is no way for *WinZip Self-Extractor*

to guarantee that the CTL3D*.DLL on the target system will function properly.   This field is the equivalent of the -3 command line option.

Press the **Make EXE** button to create the self-extracting Zip file.   Be sure to test the Zip file before distributing it.

Command Line Options

Command line options can be used to automate the processing of self-extracting Zip files via bat files and "make" files.   When command line options are specified the main WinZip Self-Extractor Window is normally not displayed.

The command line format is:

```
winzipse[.exe] filename[.zip] [options]
```

Due to system limits, the total length of the command line is limited to 127 characters.   To specify a long command line, you can put command line options into a file, and specify the filename using the "@-sign response file syntax".   For example, if the ASCII text file "standard.inp" contains the lines

```
-compact -d c:\modem
-m c:\folder\greeting.txt
-nooverwrite
```

You can use the command

```
winzipse filename.zip @standard.inp
```

To build a self-extracting Zip file with the options in the file standard.inp.

For detailed command line syntax, see the sections titled Command Line Options for Standard Self-Extracting Zip Files and Command Line Options for Self-Extracting Zip Files for Software Installation.

_____

Note: If you run a self-extracting Zip file from another program, you can pass the /auto parameter to unzip the files without user interaction.   This option has the same effect as clicking the Unzip or Setup button when the main dialog box is displayed, and, if the unzip operation is successful, clicking the Close button. You can specify a folder name to unzip files into that folder when using standard self-extracting Zip files. For example, if modem.exe is a self-extracting file, the command

```
modem.exe /auto c:\modem
```

will automatically extract files into the c:\modem folder.

Command Line Options for Standard Self-Extracting Zip Files

Valid options when building Standard Self-Extracting Zip Files are:

-y	Required for operation from the command line. Automatically respond "yes" to the "overwrite file" prompt, and do not display password warning message.
-3	Use CTL3D.DLL for 3D effects if available on the target system.
-d \<folder>	Default "unzip to" folder.
-i \<fileid>	File containing icon for the self-extractor (standard .ico file format).
-m\<fileid>	Message (comment) file displayed when self-extracting Zip is run. The default is WINZIPSE.DIZ if it exists in the folder containing the Zip file.
-compact	Create compact 16-bit Windows file. This option creates self-extracting Zip files without long filename support or a progress meter. If long filenames are not used, these files work under Windows 3.1, Windows 95, and Windows NT. (Historical note: these files are almost identical to those created by WinZip Self-Extractor 1.0).
-standard	Create standard 16-bit Windows file. This option creates self-extracting Zip files with long filename support and a progress meter. However, if long filenames are used and the self-extracting Zip is run on a system that does not support the 16-bit long filename APIs (e.g. the current version of Windows NT), a message box is displayed warning the user of potential problems, and any long filenames will be truncated. This message box is displayed after the optional comment message box.
-dos	Create MS-DOS and 16-bit Windows file. This option creates self-extracting Zip files that can be run either from Windows or from the MS-DOS prompt. Some limitations apply to these files; see the section titled Limitations on "MS-DOS and 16-bit Windows" Self-Extractors for details.
-win32	Create 32-bit Windows 95 and NT file. This option creates self-extracting Zip files that include long filename support under Windows 95 and Windows NT. Because these self-extracting files are full 32-bit programs they will not run under Windows 3.1.
-le	Language English
-lg	Language German
-overwrite	Overwrite checkbox in self-extracting file is initially checked
-nooverwrite	Overwrite checkbox in self-extracting file is initially not checked
-auto	The "Unzip" button is automatically pressed when the self-extracting Zip file is run. Use this new feature with caution: if you are planning to post this file on the Internet or an online service like CompuServe or AOL, you should be aware that

	some sysops refuse to accept files that unzip without a prompt.
-st"<title>"	Specify the text for the title bar of the self-extracting Zip file. This option is ignored for Compact and MS-DOS+Windows self-extracting Zip files.
-c <command>	Default command to execute after unzip operation completes. If specified, this option must be last. This command will be issued from the user's **Unzip To Folder**, so folder information is generally not needed in this command. The Windows WinExec API is used to run this command. **You must specify a command name, not just a filename.**

Example of usage:

```
C> winzipse filename -d c:\modem -c winhelp modem.hlp
```

This command turns filename.zip into a self-extracting Zip file called filename.exe.   The default "unzip to" folder is "c:\modem" and the command that is automatically executed after the unzip operation completes is "winhelp modem.hlp".

Note:

You can place command line options into a response file as described in the topic Command Line Options.

Command Line Options for Self-Extracting Zip Files for Software Installation

Valid options when building <u>Self-Extracting Zip file for Software Installation</u> are:

-setup	Create a Self-Extracting Zip file for Software Installation.
-t <fileid>	File containing text for the main self-extractor dialog box
-i <fileid>	File containing <u>icon</u> for the self-extractor (standard .ico file format). This icon will be used for the EXE file and in the dialog box.
-a <fileid>	File containing extra text for the self-extractor "About" dialog box
-3	Use CTL3D.DLL for 3D effects if available on the target system.
-wait<name>	Wait for name instead of the command to complete. Name must be a filename when building 32-bit self-extracting Zip files, or a module name when building 16-bit self-extracting Zip files. See the section titled <u>Command To Issue When Unzip Operation Completes</u> for information on this option.
-ishield3	Special option required for <u>InstallShield</u> 3.0 and InstallShield 3.0 SDK Edition users. See the section titled <u>Command To Issue When Unzip Operation Completes</u> for information on this option.
-win32	Create 32-bit Windows 95 and NT file. This option creates self-extracting Zip files that include long filename support under Windows 95 and Windows NT. Because these self-extracting files are full 32-bit programs they will not run under Windows 3.1
-le	Language English
-lg	Language German
-auto	The "Unzip" button is automatically pressed when the self-extracting Zip file is run. Use this new feature with caution: if you are planning to post this file on the Internet or an online service like CompuServe or AOL, you should be aware that some sysops refuse to accept files that unzip without a prompt.
-st"<title>"	Specify the text for the title bar of the self-extracting Zip file.
-c <command>	Default command to execute after unzip operation completes. This option must be specified last. This command will be issued from the user's **Unzip To Folder**, so folder information is generally not needed in this command. The Windows WinExec API is used to run this command. **You must specify a command name, not just a filename.**

Notes:

- You can place command line options into a response file as described in the topic <u>Command Line Options</u>.

- To create a self-extractor for software installation via the command line without using the wizard interface, you must specify at least either

both the -setup and -c options

or

the -ishield3 option

other command line switctes are optional.

Running A Self-Extracting Zip File

To extract or "unzip" files in a self-extracting Zip file simply run the EXE file.   You can do this as follows:

- Under Windows 95 or Windows NT 4.0: select Run from the Start menu, type the full filename of the self-extracting Zip file, and press the Enter key.   Or type the full filename of the self-extracting Zip file at the system command prompt, then press the Enter key.

- Under Windows 3.1 and Windows NT 3.5 and 3.51: activate the Program Manager, select Run from the File pull-down menu, type the full filename of the self-extracting Zip file, and press the Enter key.   Or, activate the File Manager and double click on the self-extracting Zip file.

Details on running Standard Self-Extracting Zip files:

When a Standard Self-Extracting Zip File is run, a dialog box is displayed with options to control

- The folder to which files are unzipped.

- Whether files are overwritten automatically or whether prompts are issued before each file is overwritten.

- Whether to run the optional command which was specified when the Zip was created.   This check box is hidden if no optional command was specified.

The **Unzip** button unzips all files to the specified folder.

The **Run WinZip** button opens the self-extracting Zip file with WinZip (assuming WinZip is installed on your system).   This gives you the ability to extract and view individual members, create a program group, move the archive, etc.

The **Close**, **About**, and **Help** buttons close the Self-Extracting Zip, display copyright information, and display basic usage information, respectively.

Details on running Self-Extracting Zip files For Software Installation:

When a Self-Extracting Zip File for Software Installation is run, the resulting dialog box contains three push-buttons: **Setup**, **Cancel**, and **Help**.   These buttons will run the specified command in the Zip file, close the self-extracting Zip file, and display copyright and usage information, respectively.

Note: If you run a self-extracting Zip file from another program, you can pass the /auto parameter to unzip the files without user interaction.   This option has the same effect as clicking the Unzip or Setup button when the main dialog box is displayed, and, if the unzip operation is successful, clicking the Close button. You can specify a folder name to unzip files into that folder when using standard self-extracting Zip files. For example, if modem.exe is a self-extracting file, the command

        modem.exe /auto c:\modem

will automatically extract files into the c:\modem folder.

Using the WinZip Self-Extractor Wizard

The WinZip Self-Extractor Wizard provides an easy-to-use system for building self-extracting Zip files. Just click the **Next** button to step through a series of panels that step you through the process of creating a self-extracting Zip file.   You can click **Back** at any time to change settings in a previous panel.   Click the **Help** button in any panel for details on the options controlled by that panel.

Two Kinds of Self-Extracting Files

Standard Self-Extractors

Standard Self-Extractors are easy to build and are ideal for sending documents, graphics, and other files to co-workers and associates.   They are also suitable for simple software installation.   Standard Self-Extractors are in 16-bit Windows, 32-bit Windows, and Windows+MS-DOS versions.   They can display a greeting message when they are run.   You can control the default **Unzip To** folder, whether the default **Overwrite files without prompting** box is checked, and can specify a command to run after the unzip operation completes.

Self-Extractors for Software Installation

Self-Extractors for Software Installation take a bit more work to set up, but provide a more professional looking installation. You can customize the icon and text displayed in the self-extracting Zip file's dialog box.   The self-extracting Zip file will create a temporary folder, unzip the files into the specified folder, run your setup program, wait for it to complete, then delete the temporary folder created in the first step.

For details on the differences, see the section titled <u>Detailed Differences Between the Two Kinds of Self-Extracting Files</u>

Which Zip file would you like to make into a self-extracting Zip?

WinZip Self-Extractor turns an existing Zip file (with a .zip file type or extension) into a self-extracting Zip file. The self-extracting Zip file will have the same filename as the original .ZIP file. The file type will be .EXE.

Type the full filename of the Zip file, or click the **Browse** button to search for a .Zip file.

Click the **Run WinZip** button if you would like to create a Zip file with WinZip. Then select **Make EXE** from WinZip's Actions menu to return to WinZip Self-Extractor.

Once you have selected a Zip file, click **Next** to specify options, or **Finish** to create a self-extracting Zip file with the default options.

Creating a Message File

Standard Self-Extracting Zip Files can display a greeting message box when they are run.   Leave this field blank if you do not want your self-extracting Zip file to display a greeting message.

Greeting messages can be up to 512 characters in length (512 characters is the longest message allowed by a standard Windows message box).   Formatting the text in this message box can be tricky: the exact size of the message window varies depending on your video configuration, so the text should only contain carriage returns and line feeds when you want a blank line to separate text.   One good way to create this file is as follows:

- Run Notepad

- Check the "Word Wrap" entry in the Edit pull-down menu if it is not already checked

- Type the text WITHOUT pressing the Enter key to end a line. In other words, let the "Word Wrap" feature wrap the text. Press the Enter key ONLY when you want a blank line to separate text; in that case press the Enter key TWICE.

- Resize the Notepad window to a few different sizes to be sure the text looks "right", then save the file.

This field is the equivalent of the -m command line option.

Click **Next** to specify options, or **Finish** to create a self-extracting Zip file with the default options.

Default Unzip Folder

You can specify the default target folder for the unzip operation.   If you leave this field blank the folder specified by the user's TEMP= environment variable is used.   This is generally the best choice if your Zip file contains a SETUP program that will copy the unzipped contents of the Zip to another folder.   If you do not have a SETUP program you will probably want to choose a name related to the contents of the Zip. For example, you might use "c:\modem" for a Zip containing a help file called "modem.hlp".

If you use this option and create a self-extractor for MS-DOS and Windows, you will receive a warning message stating that the Unzip Folder will be ignored if run under MS-DOS.

This field is the equivalent of the -d command line option.

Click **Next** to specify options, or **Finish** to create a self-extracting Zip file with the default options.

Command To Issue After Unzip Operation

You can specify the optional command to execute when the unzip operation completes.   If you leave this field blank no command will be issued.

The command will be issued from the user's **Unzip To** folder, so folder information is generally not needed in this command.   The Windows WinExec API is used to run this command.   **You must specify a command name, not just a filename.**   Typical commands are:

- WINHELP myfile.HLP - to start the Windows HELP engine on a file in the Zip
- NOTEPAD myfile.TXT - to start NOTEPAD on a file in the Zip

If you use this option and create a self-extractor for MS-DOS and Windows, you will receive a warning message stating that the command will be ignored if run under MS-DOS.

This field is the equivalent of the -c command line option.

Click **Next** to specify options, or **Finish** to create a self-extracting Zip file with the default options.

Icon For Self-Extracting Zip File

You can specify an icon to use for the self-extracting Zip file.   If you leave this field blank the default icon will be issued. This file must be in the standard Windows icon file format.   You can create files in this format with AppStudio, the ImagEdit program distributed with the Windows SDK, or with many third party graphics tools.

Technical details: WinZip Self-Extractor will copy the 32 by 32 pixel and 16 by 16 pixel images from the specified icon file.   Only 16-color images are used.   If your icon file does not include a 16 by 16 pixel image, and you view the resulting self-extracting Zip file in "Small Icon" view,   Windows will display a shrunken version of your 32 by 32 icon image.

This field is the equivalent of the -i command line option.

Type of Standard Self-Extractor

Four types of Standard Self-Extracting Zip Files can be created:

- **Standard 16-bit Windows** This option creates self-extracting Zip files with 16-bit long filename support and a progress meter.   If long filenames are used and the self-extracting Zip is run on a system that does not support the 16-bit long filename APIs (e.g. the current version of Windows NT), a message box is displayed warning the user of potential problems, and any long filenames will be truncated.   If long names are not used, these files work under all versions of Windows.

- **Compact 16-bit Windows** This option creates self-extracting Zip files without long filename support or a progress meter.   If long filenames are not used, these files work under Windows 3.1, Windows 95, and Windows NT.   (Historical note: these files are almost identical to those created by WinZip Self-Extractor 1.0).

- **MS-DOS and 16-bit Windows** This option creates self-extracting Zip files that can be run either from Windows or from the MS-DOS prompt.   Some limitations apply to these files; see the section titled Limitations on "MS-DOS and 16-bit Windows" Self-Extractors for details.

- **32-bit Windows 95 and NT** This option creates self-extracting Zip files that include long filename support under Windows 95 and Windows NT.   Because these self-extracting files are full 32-bit programs they will not run under Windows 3.1.

These options correspond to the -standard, -compact, -dos, and -win32 command line options.

Click **Next** to specify options, or **Finish** to create a self-extracting Zip file with the default options.

Limitations on "MS-DOS and 16-bit Windows" Self-Extractors

The following limitations apply to "MS-DOS and 16-bit Windows" Self-Extractors:

1. Long filenames are not supported, since MS-DOS does not support them.

2. When run under MS-DOS, the following options are ignored:

   - The "Unzip To" folder.   Files are always unzipped into the current working directory.

   - The command to execute after unzipping.   Since MS-DOS and Windows commands are almost always incompatible, no attempt is made to run the specified command under MS-DOS.

   - The "Default to overwriting files without prompting" setting.   Files are always overwritten.

   - The "Unzip automatically" option.   The user is always prompted before unzipping.

   - The "Icon" option.   The default WinZip Self-Extractor icon is always used.

3. Password protected zip files are not supported.

Miscellaneous Standard Self-Extractor Options

You can control the following Standard Self-Extracting Zip File options in this panel:

- Whether the CTL3D.DLL should be used to generate 3D effects for the self-extracting Zip file. CTL3D.DLL is used by many applications to generate 3D effects so there is a good chance it will exist on a lot of target systems.   If this option is specified WinZip will try to load CTL3DV2.DLL, and if not found, will try to load CTL3D.DLL.   Note that there is no way for *WinZip Self-Extractor* to guarantee that the CTL3D*.DLL on the target system will function properly.   This field is the equivalent of the -3 command line option.

- Whether the **Overwrite files without prompting** checkbox in the self-extracting Zip file is on or off by default.   This is equivalent to the -overwrite and -nooverwrite command line options.

- Whether the self-extracting Zip file should unzip itself automatically.   This is equivalent to the -auto command line option. Use this new feature with caution: if you are planning to post this file on the Internet or an online service like CompuServe or AOL, you should be aware that some sysops refuse to accept files that unzip without a prompt.

- Whether English language or German language self-extracting Zip files should be built.   These radio buttons correspond to the -le and -lg command line options.

Click **Next** to view a summary of the selected options, or **Finish** to create a self-extracting Zip file immediately.

Ready to Create Self-Extracting Zip File

Click **Next** or **Finish** to build a self-extracting Zip file with the options shown.   If you would like to change some of the options, just click **Back** to move to the appropriate panel.

Self-Extracting Zip File Has Been Created

The self-extracting Zip file has been created with the options you specified.   Be sure to test it before distributing the file!   It is always a good idea to test under all target operating systems: for example, if your file is intended for all versions of Windows, test under Windows 3.1, Windows 95, and Windows NT. If the **Test self-extracting Zip file now** button is checked, the self-extracting file will be run when you click **Next**.

Command To Issue When Unzip Operation Completes

You must specify a command to execute (usually "setup.exe") when the unzip operation completes.

The self-extracting Zip file will perform the following steps when the user clicks the **Setup** button:

1. Create a temporary folder
2. Unzip all files in the Zip file to the temporary folder
3. Run the specified command using the Windows WinExec API
4. Wait for the command to complete
5. Remove all files in the temporary folder created in the first step

Notes:

These steps are designed to work with most setup programs, which copy files from a source folder (created in step 1 above) to a user-specified destination folder.

The self-extracting Zip file makes the temporary folder the "current working folder" before running the specified command, so you normally should not specify folder information in the **Command to issue** field.

Using the **Wait for** field:

The **Wait for** field is normally not needed, but some setup programs, including the one used by Sterling Software's InstallShield, launch another program to handle the installation, then terminate immediately. In these cases you need to use the **Wait For** field.   This tells the self-extractor that, before deleting the files in the temporary folder, it should wait for the program specified in **Command to issue** field, then for the name in the **Wait for** field.   When building 32-bit self-extracting Zip files, you must specify the file name of the EXE file you want the self-extracting Zip file to wait for.   For technical reasons, when building 16-bit self-extracting Zip files, you must specify the module name, not the file name.   The module name is often but not always the same as the file name.   One way to determine the module name of an EXE file is to use the Windows 95 QuickView utility to view the file.

Note: if you have trouble with this option, one alternative is to use a Standard Self-Extracting Zip File.

Configuration Files

This panel contains three input fields that control the appearance of the self-extracting Zip file:

1. You must specify the name of a file containing text for the dialog box.   The text in this file is limited to 256 characters.

2. You can specify an icon for the dialog box.   This file must be in the standard Windows icon file format.   You can create files in this format with AppStudio, the ImagEdit program distributed with the Windows SDK, or with many third party graphics tools.

3. You can specify the name of a file with additional text for the About box.   This text in this file is limited to 256 characters.

One way to create these text files is as follows:

- Run Notepad

- Check the "Word Wrap" entry in the Edit pull-down menu if it is not already checked

- Type the text WITHOUT pressing the Enter key to end a line. In other words, let the "Word Wrap" feature wrap the text. Press the Enter key ONLY when you want a blank line to separate text; in that case press the Enter key TWICE.

- Resize the Notepad window to a few different sizes to be sure the text looks "right", then save the file.

Miscellaneous Options

You can control the following options in this panel:

- Whether the CTL3D.DLL should be used to generate 3D effects for the self-extracting Zip file (Windows 95 and Windows NT 4.0 automatically generate 3D effects, even if this option is not specified).   CTL3D.DLL is used by many applications to generate 3D effects so there is a good chance it will exist on a lot of target systems.   If this option is specified WinZip will try to load CTL3DV2.DLL, and if not found, will try to load CTL3D.DLL.   Note that there is no way for *WinZip Self-Extractor* to guarantee that the CTL3D*.DLL on the target system will function properly.   This field is the equivalent of the -3 command line option.

- Whether a 16-bit or 32-bit self-extracting Zip file is built.   32-bit self-extracting Zip files can ONLY be run under Windows 95 or Windows NT.   This option corresponds to the -standard and -win32 command line options.

- Whether the self-extracting Zip file should unzip itself automatically.   This is equivalent to the -auto command line option. Use this new feature with caution: if you are planning to post this file on the Internet or an online service like CompuServe or AOL, you should be aware that some sysops refuse to accept files that unzip without a prompt.

- Whether English language or German language self-extracting Zip files should be built.   These radio buttons correspond to the -le and -lg command line options.

Notes for InstallShield Users

The following notes apply if you are building a Self-Extractor for Software Installation and plan to run the SETUP.EXE program from InstallShield Software Corporation's InstallShield 3 or the InstallShield SDK Edition (distributed with Microsoft's Visual C++ 4.x disk).

- When using InstallShield with Self-Extractors for Software Installation, you **must** include the InstallShield file _ISDEL.EXE in your self-extracting zip file.   _ISDEL is normally part of all distribution packages created with InstallShield 3.0, including the InstallShield SDK Edition on the Microsoft Visual C++ CD-ROM.   _ISDEL.EXE is **not** part of the InstallShield 2.x or with the InstallShield SDK Edition on the Win32 SDK, so you cannot use WinZip Self-Extractor to create Self-Extractors for Software Installation with these old versions of InstallShield.

- You must either use the -ishield3 command line parameter or specify a value in the WinZip Self-Extractor Wizard **Wait for** field when running InstallShield's SETUP program from a Self-Extracting Zip file for Software Installation.   Normally the value in the Wait for field is automatically filled in. This value should be _DELIS when building 16-bit self-extracting Zip files, or _ISDEL when building 32-bit self-extracting Zip files.

- Try creating your InstallShield 3.0 distribution files **without any compression** (use the -sn switch on the icomp command). Then zip the files using **maximum compression**.   Depending on the files you are distribution, this can result in smaller self-extracting Zip files.   For example, if you compress the WinZip 6.1 evaluation version distribution files with icomp, the resulting zip file is 12% larger that when you turn off icomp compression.

Note: InstallShield is a trademark of InstallShield Software Corporation.

Register WinZip Self-Extractor

Please enter your registration information **exactly** as you received it from Nico Mak Computing, Inc.   If you have trouble, please write to support@winzip.com or 70056,241 on CompuServe.

Note that your organization name will be embedded in all self-extracting Zip files you create.

Detailed Differences Between Standard and Software Installation Self-Extractors

	Standard	Software Installation
Receiver controls Unzip To folder	Yes	No; a temporary folder is created and later deleted
Receiver controls whether command is run after Unzip operation completes	Yes	No; the specified command is always run after the Unzip operation completes
Receiver controls whether files are overwritten automatically	Yes	Not applicable; files are unzipped into a newly created temporary folder
Optional greeting message us displayed when self-extractor is started	Yes	No
MS-DOS+Windows version available	Yes	No
16-bit Windows version available	Yes	Yes
32-bit Windows version available	Yes	Yes
German and English versions available	Yes	Yes
Unzipped files are automatically deleted when command completes	No	Yes
Dialog text and icon are configurable	No	Yes

To create a Standard Self-Extractor, select the **Standard Self-Extractor** radio button in the second Wizard panel.   When using command line parameters, Standard Self-Extractors are created unless you specify the -setup switch.

To create a Self-Extractor for software installation, select the **Self-Extractor for Software Installation** radio button in the second Wizard panel.   Or, when using command line parameters, specify the -setup switch.
