QuickDelete 1.0

QuickDelete 1.0 is a handy utility to do, guess what… delete! If you got that question right, you don't have to pay the shareware fee. If you got it wrong, send me a $5.00 joke licensing fee, and do not pass GO, and do not collect $200 (better yet collect $200 and send it to me).

Question 2— How do you use QuickDelete?

A— You drag files on top of it, and let go, QuickDelete does the rest. This bypasses the awckward Special Menu. If you like it, then don't send me anything (that's right, don't clean your glare screens). Like my last programming miracle, QuickDisk, QuickDelete is whateverware. Send whatever you want, wherever you want, just make sure to E-Mail me telling me of your tax-deductable donation. My favorite places include the Red Cross, United Way, and the Clinton Legal Fund. Other donations include any software or hardware that you feel like sending me. Really, I mean it, I am a starving artist.
