

Font Pilot

by Josh Hague of Koingo Software

Description

Are you like the many other computer users out there? Do you have fonts nearly spilling out of your fonts folder? Having trouble remembering which ones are which? Or are you a layout specialist or graphic designer?

Font Pilot is here to save your day! With its easy to use sleek interface, you are able to browse every installed font on your computer. It displays them in a list which shows exactly what each font looks like. You are also able to print this out for easy reference!

This great little application isn't limited to browsing a list of fonts, you can actually "Get More Information" on each font. This will display a list of all the characters the font has to offer. Also, what would any application be without an aspect of fun? Font Pilot gives you a text box to play in. Type in any text, change its style, color, size and font — the perfect way to find the right font for the job.

Known Incompatibilities

Bitmap fonts. Incompatible fonts may produce unwanted functionality in Font Pilot.

Minimum Requirements

Mac OS 8.6 (Mac OS X Highly Recommended)
CarbonLib
