### **OS/2 GAINS FINANCIAL PROGRAM**

Glendale, California -- The Software Development Group announced the availability of a personal financial software package made specifically for IBM's OS/2 operating system.

MoneyWiz for OS/2 version 1.0, while immediately available, will have its' official introduction at the Computer Expo '95 held at the Los Angeles Convention Center April 22-23 1995.

"Most of our users have been using DOS or Windows versions of financial software programs." explained TSDG's Director Rick Byrnes. "These programs are not able to take full advantage of OS/2's 32-bit operating environment. MoneyWiz is a 32-bit application with processing capabilities that the DOS and Windows versions do not have." MoneyWiz is a multi-threaded application allowing the program to run several processes at the same time.

MoneyWiz will run on any OS/2 machine with a minimum of 6 megabytes of RAM, and at least 3 megabytes of free hard disk space.

MoneyWiz for OS/2 has a suggested retail price of \$79.95 with an introductory price of \$59.95 if purchased before June 30, 1995.

The Software Development Group is a privately owned company specializing in custom software development and commercial software programs. Parties interested in further information may contact TSDG directly at 818-377-8627 or on the Internet at [softdevgrp@aol.com](mailto:softdevgrp@aol.com)
