Subcommands available while sending mail:

~a   Insert standard signature file.
~A   Insert alternate signature file.
~e   Invoke editor on current message.
~m item   Include body of message(s) defined by item,
            indented.
~M item   Include message(s) define by item with headers,
            indented.
~f item   Include body of message(s) defined by item,
            unindented.
~F item   Include message(s) define by item with headers,
            unindented.
~p   Print message entered so far using external
            pager.
~P   Print message entered so far.
~r file   Read in an arbitrary file.
~s   Add new subject or replace existing subject with
subject   subject
~v   Alias for ~e command (for compatibility with
            UNIX sendmail).
~?   Display this mail subcommand list.
~|cmd   Filter message entered so far through cmd
~!cmd   Execute command (does not alter message)
~~   Enter a data line beginning with a tilde (~)

When entering mail at the ? prompt, use these commands by putting
the ~ in column 1.

    Note: The ~m and ~M commands use the same syntax to describe
          for items as the main mail parser; this allows
          specifying message number(s), user id, or subject.
          Type "help" at a MAIL prompt for a detailed description
          of the allowed syntax.

    Note: The exact meaning of ~p and ~P commands can be inverted
          by the use of the **pager** option.
